100,000 PEONIES

FOR FALL DELIVERY

All of the Leading Varieties from the Cottage Gardens' Famous Collection.

Our enormous stock enables us to send out tubers of the very highest quality, and in filling orders we use undivided roots only—assuring an abundance of flowers the first season. This year we offer one, two and three year plants.

WHOLESALE LIST NOW READY. SEND FOR A COPY.

NEW YORK CITY

Rhododendron indicum; Syn. Azalea indica

Enormous numbers of this beautiful greenhouse flowering shrub are bought every fall for forcing purposes, and a great many find their way the following spring to the rubbish pile simply because their culture is not understood by the purchaser. This state of affairs can easily be remedied if the following suggestions are carried out fully, and perhaps someone will be convinced of the folly of discarding valuable plants, and of spending money needlessly upon new stock.

After the plants have flowered all dead blossoms and seed pods should be removed, taking care not to injure any new shoots which may be appearing, as these will furnish the flower buds for the coming season. If necessary, the plants should then be repotted, four-fifths of fibrous peat and one-fifth of sand being a good potting compost. Firm potting is essential.

After potting, the plants should be placed in a greenhouse with a temperature ranging between 60 and 70 degrees F. They should be syringed three or four times a day to aid in the production of new wood and to prevent the attacks of red spider, thrips, etc., to which the plants are susceptible. By this treatment a nice head of growth will be produced, and it is not necessary to prune away any wood, except to shape the plants. They can either be trained in a pyramidal or bush form. In the former case, bamboo canes will be essential; these must be driven into the soil and a leading shoot selected and trained thereto.

About the middle or end of May the plants should be removed to a cold frame and allowed to remain until thoroughly hardened off, or, if no cold frame is available, they should be placed in a sheltered place and covered at night in case of frost. After all danger of frost is past, the pots should be plunged to the rims in coal ashes in a position sheltered from strong winds, but to which a fair amount of sunshine has access. This procedure will not only provide an anchorage for the plants but will also prevent the soil moisture from escaping too rapidly, thus saving extra labor in watering.

Although the *Rhododendron* tribe will stand more water at the roots than most hard-wooded ericaceous plants, care must be taken in this respect. Never allow the soil to become sodden, as this results in the death of the young fibrous roots; on the other hand, a too dry condition must be avoided. A good plan is to tap the pots, and the answering ring will indicate approximately the amount of moisture present in the soil. If a dull sound is heard the plants will not require water; if a sharp ring, the reverse. Syringing should be practised at least twice daily in dry weather. This will encourage a nice clean growth until the flower buds begin to form.

Toward the fall of the year syringing should be discontinued, and previous to the appearance of frost the plants should be removed to a cool greenhouse, thence placed in heat as required for forcing. Excessive heat is not conducive to the successful forcing of any hard-wooded plant, therefore, a temperature of from 50 to 60 degrees F. is high enough to start, and a temperature of 75 ought to be regarded strictly as the maximum.

Rhododendron indicum, as imported, usually possesses a fine root system, which is due to the peaty soil in which it has been grown. As soon as it is in the

hands of florists it is either potted in peat, or, in the greater number of cases, in loam. If in the latter, it will be observed that very few roots are formed, thus proving that loam is not at all desirable as a rooting medium, and when used alone is certainly not conducive to the production of a healthy root system.

Our failures and those of others teach us better lessons than our successes, and we must discriminate between the right and the wrong methods in order to be successful cultivators of any kind of plants.

H. J. Moore

Notes from the Arnold Arboretum

A handsome species and very distinct from all other commonly cultivated *Clematis* is the new *Clematis eriopoda* (*C. tangutica*) from North Tibet with large yellow nodding flowers. It is a woody climber growing about ten feet high and having finely divided foliage and bright yellow bell-shaped flowers about two inches long, in shape resembling a half open yellow Tulip with pointed petals; the flowers, however, are not borne upright, but nodding at the end of long and slender stalks and are in shape and color very unlike any other *Clematis*. The flowers appear successively during June and July and are followed by very ornamental heads of fruits with long feathery tails which persist on the plant until autumn. *Clematis eriopoda* has proved perfectly hardy at the Arboretum and is to be recommended as well for its attractive flowers as for its ornamental feathery fruits.

Another handsome and interesting vine and quite new to cultivation is *Periploca sepium* introduced into the Arnold Arboretum by Mr. J. G. Jack of the Arnold Arboretum who collected seeds three years ago in northern China. It is closely related to the Mediterranean *P. graeca* which is in cultivation since a long time, but little planted in this country; it is not perfectly hardy in this latitude, while *P. sepium* appears to be quite hardy, as is to be expected from plants native to northern China. The Chinese species does not seem to be such a vigorous grower as *P. graeca* which reaches a height of about forty feet; it is smaller in every part. Its dark green lustrous leaves are about two to three inches long and narrowly lanceolate in outline; the flowers appear in June and July on slender stalks in few-flowered clusters in the axils of the leaves; they are dark purple when they open, changing later to greenish or greenish purple, almost globular in shape and one-third of an inch in diameter; this peculiar shape is caused by the recurved petals which bear besides five thread-like curved appendages arranged around the short stamens. The flowers are not fragrant as are those of *P. graeca*. The light green slender pods about three inches in length and disposed in pairs are also attractive. The chief ornamental value of this vine lies in the dark green lustrous foliage which remains unchanged until late in fall.

wide variety of subjects treated on by writers of repute in the gardening, floral, seed, landscape, or nursery departments of horticulture and, as it represents no small amount of labor we hope it will be appreciated and preserved with a view to future convenience. We are ready for suggestions from our friends as to topics that they would like to see covered more fully in the volume which begins with the present issue. The more diversified and comprehensive our list of contents may be the better we shall be pleased. Don't hesitate to advise us if you think you see any way in which the paper's usefulness in this respect may be extended.

A business organization
 A glance over the long line of distinguished looking faces which appear in the group picture on another page of this issue will convince anyone but the most

hardened sceptic that the American Seed Trade Association is composed of men of more than ordinary force and ability. Adversity is a capital demonstrator of what there is in a man, a business, or a society and there is no better way to bring to the front the "choice and master spirits" than to force upon them a condition of continuous struggle. The harsh cadence of many a hotly contested encounter with the trained warhorses of national legislative bodies has kept the American seedsman very much awake and no one who takes a critical look at the picture aforesaid will doubt that the seedsman is well qualified to battle for what he considers to be his rights. We are told in our seed trade notes that this last convention was a model of seriousness and decorum; a perusal of the addresses and discussions discloses an earnestness in the consideration of momentous questions which stamps the American Seed Trade Association as an aggressive business organization and its Niagara Falls meeting as an event of more than ordinary importance. "Long may they wave."

A useful
 and profitable
 crop

The general complaint of low quality in the cut flower product as received in the wholesale markets everywhere since the advent of torrid weather is nothing but what experience has taught us to expect at this season. In fact, we believe it was deferred to a later date this season than has been the case in most years. At such times the roses grown in what are known as cold houses are a boon to the florist who aims to maintain a reputation for high quality among his customers and we have often wondered why more of these "cold houses" are not operated by the large growers who seek to maintain a reputation as reliable sources of supply the year round. Nothing more beautiful can be found than the Carnots and Kaisersins produced by this system during the recent heated spell when everything else succumbed and they saved the day in many instances where presentable flowers were needed for the sweet graduate or June bride. There are hundreds of houses well past their usefulness for the production of winter roses but too good to be demolished which might be closed down in November and started up again in February and made to produce crops for Easter, June and midsummer, yielding a better net profit than if carried on in the usual manner and no doubt the list of varieties adapted to this method of treatment might be largely extended, with a little experimentation.

The complete index to the contents of Vol. IX goes as a supplement with this number. It should serve as a valuable reference list for those of our readers who may at any time desire reliable information on the

European Horticulture

CANNAS OF MERIT

The names of the varieties of cannas given below may be new to some of the readers of HORTICULTURE, but in regard to the beauty of the flowers and freedom to bloom they are practically jewels of great value and among the best varieties we possess. *Feuermeeer*, a most abundant bloomer, the flower of moderate size, of vermillion color, and the leaves dark green. In growth it is of medium height. *R. Wallace* is also of medium height, the leaves green; the flowers, a bright canary color, of large size with petals of great breadth. The flower is loosely formed.

Isabella Breitschwert. The plant grows tall; the leaves are of a dark green tint; flowers large, salmon pink; flower spike large; an abundant blooming variety.

W. Watson. The plant grows rather tall, has leaves of a metallic purplish brown tint; the flowers orange-salmon, becoming paler with age. They are of a peculiar form and tint, appearing gracefully above the leaves, and forming a wonderful contrast with these.

Furst Wied. The plant is dwarf, flowers velvety-red purple; spikes uncommonly large and well formed. The leaves are dark green.

Mme. Marguerite Muhle. The plant is of middle height; leaves blue-green, edged brown; flowers light carmine rose with a tinge of salmon rose; a good bloomer. A peculiar new color.

Senateur Millaud is an old variety of canna seldom found in present day lists, but, considering the beauty of its leaves it would be a pity to lose it from cultivation. As a flowering variety it is valueless, and it is better to remove the flower buds early, seeing that the flowers are detrimental to the complete effect of the leaves. These are of gigantic size and of a pleasing reddish brown tint, often growing to a height of 7 1-2 feet on well grown plants.

THE KROUMIR MELON

At the International Horticultural Exhibition at Düsseldorf in the year 1904, the Syndicate of Paris Vegetable Cultivators showed Melon Kroumir at the August special fruit show; which by reason of its sweetness and delicious aroma was distinguished among all the other melons. Further experience with this variety raised from seeds furnished by Herr Ernest Benary, has shown since that date that it is a very excellent melon for frame culture and worthy of extended cultivation. It is less tender than the fine English varieties. The fruit is thick ribbed, of oval shape, and of a dark green color when ripe and weighs from 4 to 5 lbs. The plant is a good cropper.

THE BEST RHODODENDRONS FOR FORCING

The firm of P. van Noordt and Sons, Boskoop, recommend the following varieties for early forcing: Christmas Cheer, Mme. Wagner, Pink Pearl, Princess de Monaco, Chev. Felix de Sauvage, Dr. Drude, Dr. D. Mill, Comte de Gomer, Prince Camille de Rohan, and Album Splendidum.

A Rhododendron Exhibition

Messrs. J. Waterer and Sons, of Bagshot, Surrey, whose noted rhododendrons have many admirers in Britain and the United States, this summer are making a brilliant display at the Imperial International Exhibition and at the Royal Botanic gardens. As in former years the exhibit at the Botanic Gardens is contained under a gigantic marquee. Upwards of 2000 plants are arranged on undulating ground, about 200 different varieties being represented. A grand effect is produced by the combination of the gorgeous hues of 50,000 blooms, intermingled with *Kalmia latifolia* and *Virburnum plicatum*. An attractive novelty was seen in *Madame Moser*. This is a double rhododendron of a rich, deep crimson tint, and is likely to become as popular as some of the firm's other introductions. Pink Pearl continues to be a prime favorite with its imposing trusses of well developed blooms. Other notable varieties shown are: Mrs. E. C. Stirling, of a delightful shade of pink; Gomer Waterer, white slightly flushed with pink at the edge; Lady Clementina Walsh, light cream, edged with pink; Frances B. Hayes, white, with black spots; Strategist, pink; John Henry Agnew, pale blush, chocolate spots, and many others. Messrs. Waterer continue to find a big demand for their rhododendrons, which are allotted no less than 60 acres in their picturesque nursery in Surrey. The display has attracted a large number of visitors to the Botanic Gardens, and the firm have been the recipients of numerous congratulations for the meritorious exhibit, which is claimed to be the largest flower show made by one firm in the world.

W. H. Adsett.

Hybrid Calceolarias

I read with interest Mr. Moore's article on Robert Shore's Hybrid Calceolaria, and feel sure that in time we shall have a class of hybrids of this type that shall be more adapted to our American climate than the herbaceous ones that have been grown in past years. Any one who has grown them knows how hard it is sometimes to coax them through the hot months of summer, and if they are not started about the end of June or first of July a large specimen is out of the question when flowering time comes in the spring, and they do not stand the bright spring sun so well as the rugosa type.

James Crosby, gardener for Mrs. J. W. Tufts of Medford, Mass., had a fine display of interesting crosses the past spring. The different colors of the herbaceous varieties were crossed with *Rugosa Golden Gem* and *Stewartii* both ways. The result was a mass of large clusters of flowers of various shades of coloring. They were grown in five-inch pots and I don't think I ever saw anything so floriferous in that size of pot. During their growth the plants were quite stocky with strong rich green leaves very much resembling the shrubby habit of *Rugosa*. They root quite freely from cuttings. Mr. Crosby selected a number of the best varieties and intercrossed again and by next spring may have something quite interesting.

Fredrick Moore

George F. Stewart.

AFTER ADJOURNMENT.

Our Philadelphia office was favored on the 30th ult., with a goodby visit from J. D. Eisele, general manager of the plant department of the H. A. Dreer Corporation, who sails July 3rd, on the S. S. Minnetonka, from New York, for his annual business and pleasure trip to Europe. He is accompanied this time by his wife and daughter.

As we go to press the New York Florists' Club members are indulging in the closing festivities of their greatest day in the year—the outing for which the industrious and indefatigable managers have been working almost continuously for months. To make a popular, social and financial success of such an affair is no light responsibility and we often think that the hard work which must be put into it by those selected to perform the duty is very inadequately appreciated by those whose enjoyment they labor to promote. Next week we shall give a full account of the New York club's event and we hope to be able to record it as the greatest success in the line of picnics, up to date.

Amidst all the vicissitudes which the bedding plant has experienced, one member of the group—the zonal geranium—has held its own, without any abatement of popularity and today stands as high in favor with the gardening public as it ever did. In fact, the present season has seen an actual famine for the most desirable varieties in many places and prices have been maintained throughout. In the meantime specialists have continued to hybridize and improve, and each year sees some notable advancement in desirable qualities. "When geraniums are mentioned one thinks of Vincent," for there is nothing promising in geraniums produced which does not get a trial at the big Vincent geranium ranch. Their new advertisement in this issue should not be overlooked.

The assertion by Mr. Danzer in his talk on the development of the florist business, which we refer to briefly in this issue, that the retail trade are anxious to back up the growers in popularizing new varieties is most reassuring to the well-wishers of the florist trade, if generally true. It has been usually represented that the retail trade as a whole was opposed to any further diversifying of the commercial cut flower product because it entailed their carrying a larger daily stock on hand. Mr. Danzer's experience is in Detroit, a city that has always enjoyed an excellent and discriminating flower demand. He makes a good point when he intimates that the indulgence in a greater variety of material would emphasize the divergence between the legitimate flower store and the street dealer, the latter thriving mainly on the surplus of the standard product.

Indianapolis. The plantsmen are all through and well satisfied with the spring trade. The heavy rains that we have had in this section have been bad for young carnation stock and if they keep up will do considerable damage.

BACK TO PURE TYPE.

The accompanying picture shows a field of typical Bermuda lilies, the early blooming long trumpet form which originally gave this lily its great preeminence. The plants shown in this picture are from large bulbs, those seen in the cover illustration being one year younger. Theodore Outerbridge, the owner, states that he start-

ed the stock four years ago with but five hundred bulbs. The very gratifying result is evident in the photographs. Another season he hopes to have some to offer to the trade and the outcome of this effort to regain the purity and health which the Bermuda *Harrisii* originally possessed will be noted with interest by the bulb-forcing trade generally.

PHILADELPHIA NOTES.

Most of the wholesale flower markets have announced that they will be closed all day, July 5th.

Lilly & Upton, wholesale florists, Sanson above 15th street, have dissolved. Samuel Lilly, the senior partner, will continue the business.

David and Jonathan are in town this week. That's the only way to describe the affectionate reunion of Jno. Westcott of Philadelphia, and H. B. Beatty of Pittsburg.

Thomas Roberts, gardener for Col. Morrell, Torresdale, Philadelphia, and Mrs. Roberts sailed on the Lusitania, June 30th. They will visit their old home in Wales and the noted country seats nearby, as well as Kew, Veitch's and other celebrated public and commercial institutions.

A HARDY YELLOW CARNATION.

We are advised by Hjalmar Hartmann & Co., of Copenhagen, Denmark, that they have sent six plants of the sensational new hardy carnation Countesse Knuth to Yokohama Nursery, New York, and two to R. & J. Farquhar & Co., Boston, for trial so that American carnation growers may have an opportunity to see the flower of this novelty which has been so favorably commented on by European writers. Countesse Knuth is a yellow carnation, unlike any other in existence, flowering with stiff stems from July to November in the open border in great profusion and pronounced absolutely hardy. Messrs. Hartmann & Co. will begin dissemination of this novelty next September.

WASHINGTON NOTES.

Washington has been sweltering under the most torrid wave that has visited the city in years. Business is quite dull, commencements are over and even Cupid is enervated by the heat. All the city is agog, though, over the forthcoming automobile and flower parade that will take place on the 5th of July. Autos will be decorated with flags and flowers. The Washington Post offers a first prize of \$100 for the handsomest decorated auto. It is to be hoped that this flower parade, at least, will become an annual custom. It will be of inestimable value to the florists, as well as to the flower-loving public.

Personal.

John Robertson, of 1108 Cincinnati avenue, Washington, D. C., has closed his store pro tem, till he can find new quarters.

Wm. R. Smith of the Botanical Garden, Washington, has been seriously sick at his home, but at the present writing is somewhat improved.

John A. Clark of the Botanical Garden, Washington, sailed for Scotland on the 28th ult. He will make a short visit to his native country and it is thought will bring back some fresh ideas.

New York, N. Y.—The American Nursery Co. secured the contract for furnishing and delivering stock for the Metropolitan and City hospital districts, Blackwell's Island Dept. of Charities.

NEWS OF THE CLUBS AND SOCIETIES

PENNSYLVANIA HORTICULTURAL SOCIETY.

The sweet pea show held on the 29th inst. proved a pleasant surprise. The hot wave of a week made everyone believe there would be very few good flowers. But the general average was of exceptional quality and there was keen competition among the private gardeners for the prizes offered. Far and away above all else was the magnificent exhibit of Burpee & Co. of over fifty vases shown as sweet peas ought to be shown. This was a revelation to most of the visitors and exhibitors. The display was under the charge of Mr. Kerr. We trust the powers that be will take the hint and hereafter arrange the schedule so that the sweet pea may be shown in its most artistic form. Framers of schedules have more to answer for than they think. Herbaceous perennials were a strong feature of the exhibition. Newbold, Pepper, Penfield, Ellison, Bodine, Wanamaker, Morrell, Drexel, and many other private estates took part.

The awards on sweet peas were as follows:

Six vases, six varieties, 1st, J. W. Pepper, gardener Wm. Robertson; 2d, Mrs. F. C. Penfield, gardener John McCleary. Fifteen vases, fifteen varieties, 1st, Mrs. Penfield; 2d, Col. E. V. Morrell, gardener Thos. Roberts. White Spencer, H. H. Ellison, gardener Samuel Hammond. Lovely Spencer, Ramona Spencer and vase of mixed varieties, Mrs. F. C. Penfield. Twelve vases, twelve varieties, 1st, Mrs. F. C. Penfield; 2d, John W. Pepper.

Hardy herbaceous perennials. 1st, C. B. Newbold, superintendent Thos. Logan; 2d, Samuel T. Bodine, gardener Francis Canning.

The committee to act under the Landreth resolution of Tuesday was constituted as follows: Capt. Burnet Landreth, chairman; H. W. Wood, Richmond, Va.; Albert McCullough, Cincinnati, O.; J. M. Lupton, Mattituck, N. Y.

NEW LONDON COUNTY HORTICULTURAL SOCIETY.

The annual rose show of this society was held in Town Hall, Norwich, on June 24, with a display that for extent and variety has seldom been surpassed here. Mrs. W. C. Lanman, gardener Charles T. Beasley, G. S. Palmer, gardener Alfred Flowers, Alfred Mitchell, gardener Gustav Neuman, John Moore, the Geduldig Estate, and the Plant Estate were the chief exhibitors and were well represented in the various classes. Peonies vied with roses for attention; pansies were shown by John Moore and W. W. Ives; Alfred Mitchell's table of fifty varieties of herbaceous flowers was notable; and a centre of attraction was the exhibit by C. T. Beasley of a dinner table decorated with roses, a table of mammoth gloxinias, and one of exquisite begonias and four dahlia novelties. Among the thirty varieties of peonies shown by Gustav Neuman, "New London" seemed to be the sensation of the hour. Vegetables were shown in good variety and prime condition.

CONNECTICUT HORTICULTURAL SOCIETY.

This society held its second June meeting on the 25th ultimo, President Huss being chairman. Many arrangements were made for the fall exhibitions; and it was decided to continue the dahlia show for two days, September 23d and 24th. It has formerly been held but one day. A change has been made in the dates of our chrysanthemum exhibition, owing to prior engagements of the Putnam Phalanx Hall; and November 3d and 4th are now set down as the dates. The society voted to raise the admission fee at the last named exhibition, from 10 to 25 cents, with the 10 cent fee continuing for school children. Thomas B. Sperry, of New Britain, made a handsome display of cut blooms of sweet william, and received a vote of thanks for the same. Amos Reynolds, of Hartford, one of our long-time and esteemed members, is critically ill; and the society voted to send, through the secretary, its cordial expression of sympathy, and its heartfelt desire for his speedy recovery. Mr. Reynolds is a man of genial and kindly spirit; and all our members sympathize with him in his affliction. Our schedules are now being completed for the fall exhibitions, and the life members of the society will be given a special invitation to contribute, if they so elect, prizes for flowers, fruits or vegetables. The next meeting will not be held until August 27th, as the vacation season and period of relaxation is now in its commencement.

GEORGE W. SMITH, Secretary.
Melrose, Conn., July 1, 1909.

TEXAS NURSERYMEN'S ASSOCIATION.

The tenth annual meeting of the association will be held at College Station, July 28 and 29, in conjunction with the Horticultural Society and the Nut Growers' Association. Among the addresses we note: "Ornamentals for the Coast Country," by H. C. Styles, Raymondville; "Shade Trees: What Kind and How to Handle for Best Results," by C. C. Mayhew, Sherman; W. A. Yates, Brenham; "Landscape Improvement—the part of the Nurseryman," W. B. Munson, Denison; J. F. Sneed, Tyler. J. W. Tucker leads the discussion on "The Nursery Office." "Damage Suits: How to Meet the Issue," is another topic that will undoubtedly draw out many opinions.

PREPARING FOR MILWAUKEE FLOWER SHOW.

Preliminary arrangements are now under way for the flower show which is to be held in Milwaukee. The premium list has not as yet been issued, but the club expects to offer perhaps \$3,000 to \$5,000 in premiums. The show is to be held in the new Auditorium building which is now under construction and which will probably be completed early in the fall. This will be an ideal building in which to hold this kind of a show.

SOCIETY OF AMERICAN FLORISTS' CONVENTION.

Just for a few moments I wish to talk briefly to you about Cincinnati, the Queen City of the west, and where we hope you will attend the 25th anniversary of the Society of American Florists. First I will tell you that we have hot weather here now, in July, and in August; so do you, matters not where you live, unless it's at the North or South Pole. Right here I want to say that for the past month we have not had a single case of typhoid fever in the city that originated here, and only two cases in all, and these were imported from other places, so you do not have to be afraid of drinking our water. Our hilltops are not to be surpassed by any city on the American continent; they are picturesque and beautiful, as car rides in any direction will tell, and show you.

Those exhibitors who have not secured space should do so at once by writing the Superintendent, Wm. Murphy, 311 Main St., Cincinnati, O.

Later I will tell you more of Cincinnati Beautiful, but make up your mind now that you will attend the 25th annual meeting, the Silver Jubilee of the S. A. F., August 17th to 20th inclusive.

E. G. GILLET.

NATIONAL SWEET PEA SHOW.

The proposed National Sweet Pea Society of America will hold their first annual exhibition at the Museum of Natural History, Columbus avenue and 77th street, New York City, on July 7th and 8th. Through the courtesy of Dr. Bumpus, we will also be allowed to use the Siberian Hall for the Convention.

A paper will be read by Rev. W. T. Hutchins of Santa Rosa, Cal., Prof. John Craig of Ithaca, N. Y., and others.

Great interest is being shown by Sweet Pea enthusiasts throughout the country, and it is expected that there will be over 1,000 vases of Sweet Peas exhibited.

Special cups, medals and money prizes have been offered in the various classes, by A. T. Boddington, W. Atlee Burpee, Peter Henderson & Co., W. W. Rawson & Co., Stump & Walter, H. A. Dreer, Morris County Gardeners' and Florists' Society, C. C. Morse & Co., J. M. Thorburn & Co., Watkins & Simpson, H. F. Michell Co., F. R. Piereson Co., Florists' Exchange, H. A. Bunyard, John Young, Jerome B. Rice, H. E. Fiske Co., Harry Turner, F. H. Traendly, and Chas. H. Totty.

The judges will be: Mr. G. W. Kerr (with W. Atlee Burpee), Wm. Sim of Cliftondale, Mass., and Edgar A. Higgins, Avoca, N. Y.

The scale of points for judges will be as follows: Stem, 35 points; size, 15; rarity, 5; number of flowers on a stem, 25; color, 15; fragrance, 5.

Application blanks for charter membership, schedules and further particulars and information can be had from Harry A. Bunyard, secretary pro tem, 342 West 14th street, New York City.

MASSACHUSETTS HORTICULTURAL SOCIETY.

When the Massachusetts Horticultural Society set the date for its annual rose and strawberry exhibition it did not reckon on the spell of weather which hit the country at that date. Accordingly the show which opened at noon last Saturday at Horticultural Hall and continued until Sunday at six o'clock, was one largely of other flowers than roses. To be sure there were roses in profusion, but no such choice ones as would have been shown had it not been for the hot weather. With the other flowers, the strawberries and a choice collection of summer vegetables, the main hall, the small hall and the loggia were well filled. The exhibits, as a whole, were remarkably good, and some distinct novelties were shown.

Principal among the rose exhibitors was M. H. Walsh of Woods Hole, who displayed about 250 hybrid teas, representing nearly every color and all varieties of standard cultivation, the whole making a wonderfully handsome exhibit.

C. W. Parker, W. J. Clemson gardener; J. O. Christensen; George R. White, gardener F. Gavin. A. F. Estabrook, W. A. Riggs and several others were well represented in the rose display. A seedling resulting from *Wichuraiana* and *Crimson Rambler* crossed with a H. P., raised by Jackson Dawson and named Prof. Sargent, attracted much attention. It is a single, delicate pink and grows to a height of ten feet.

In the general class of hardy herbaceous flowers and plants, R. & J. Farquhar & Co. showed a large and fine collection, massed for effect with rocks and ferns. William Whitman, gardener Martin Sullivan, showed campanulas, foxgloves and sweet williams. The Old Town Nurseries, a collection of campanulas, larkspur and phlox, Walter Hunnewell of Wellesley, gardener T. D. Hatfield, hardy herbaceous flowers including Sutton's new red larkspur, The Bellevue Nurseries, herbaceous flowers including campanula and some fine pentstemons, W. W. Rawson Company, sweet peas and Spanish iris, Francis J. Rea nymphaeas, W. A. Manda myosotis, campanula and pink spirea, Mrs. F. Ayer, gardener George Page, an unprecedented fine display of campanulas and sweet williams, W. G. Postings, splendid collection of sweet william Newport Pink.

In addition to the regular premiums special awards were made as follows:

Silver medals: Jackson Dawson, Rose Prof. Sargent (R. *Wichuraiana* X *Crimson Rambler* X pink hybrid); Prof. C. S. Sargent, *Rhododendron*, light pink maximum hybrid.

Bronze medal: Bellevue Nurseries, artistic display.

Certificates of merit: W. G. Postings, seedling branching *Delphinium Belladonna*; W. W. Rawson & Co., new sweet peas.

Honorable mention: George Hollis, peonies; E. J. Shaylor, ditto; T. C. Thurlow & Co., ditto.

Vote of thanks: T. C. Thurlow & Co., vases of kalmias; W. A. Manda, display of herbaceous plants; R. & J. Farquhar & Co., display of peonies.

AMERICAN ASSOCIATION OF PARK SUPERINTENDENTS.

Program of the eleventh annual convention to be held in Seattle, Wash., August 9-12, 1909:

First day, Monday, August 9.—Morning session 9 a. m. in the Chamber of Commerce. Address of welcome by the Mayor of Seattle. Response by the president of the association. Reading of minutes, secretary-treasurer's report and other general business. 1.30 p. m., excursion to Volunteer Park, Interlaken Drive, Washington Park, over Roanoke extension to Woodland Park. 8 p. m., reading of papers and discussion.

Second day, Tuesday, August 10th.—Morning session, 9 a. m., reading of papers and discussion. Miscellaneous business 1.30 p. m. Visit to Leschi Park around Mercer Island to the Alaska-Yukon-Pacific exposition grounds, where the balance of the day will be spent.

Third day, Wednesday, August 11th.—Morning session, 9 a. m., election of officers, choosing place of next meeting and general business. 1.30 p. m., visit to the playgrounds and a trip along the boulevard to the shores of Lake Washington, crossing over to Bailey Peninsula.

Fourth day, Thursday, August 12th.—Visit to parks in Tacoma and possibly, August 14th, a trip in the Paradise Valley under the direction of the Park Board of Tacoma.

Delegates to the convention may leave or connect with train leaving Boston, B. & A. R. R., July 27, 10.30 a. m.; Chicago, C. M. & S. P. R. R., July 28, 6.45 p. m.; Minneapolis, N. P. R., July 29, 10.45 p. m.; Gardiner, N. P. R., August 5, 7.15 p. m.; Spokane, N. P. R., August 7, 4.45 p. m.; arriving in Seattle, August 8, 8.30 a. m. This allows delegates five and a half days' trip in the Yellowstone National Park and one day spent in Spokane as the guests of the Chamber of Commerce of that city. Full particulars may be had by addressing either of the committee of arrangements, the president, John W. Duncan, Boston, Mass.; the secretary-treasurer, F. L. Mulford, Harrisburg, Pa., or Theodore Wirth, superintendent of parks, Minneapolis, Minn.

Perhaps the finest exhibition of American park photographs is that now on exhibition at the Alaska-Yukon-Pacific Exposition, gotten up under the auspices of this association. The scheme of getting together a collection of photographs of parks throughout the country was conceived by the president of the association, John W. Duncan, of Boston. These pictures will remain on exhibition until the close of the exposition next fall.

Among the cities sending pictures are Boston, Brooklyn, Chicago, Cincinnati, Washington, Kansas City, Los Angeles, Colorado Springs, Madison, Wis.; Davenport, Iowa; Bridgeport, Conn.

BUFFALO FLORISTS' CLUB.

The regular meeting of the Buffalo Florists' Club will be held on Tuesday, July 6th, at their rooms and it is the wish of the secretary that every member be present. Important business will be transacted. The talk of all members is the "Picnic," date for which will be set at this meeting.

BIRMINGHAM (ENG.) BOTANICAL AND HORTICULTURAL SOCIETY.

This old established society which does excellent work in the country around the midland metropolis and enjoys the patronage of numerous amateurs, nurserymen and gardeners, held its exhibition on Wednesday, June 9, at the Botanical Gardens, Edgbaston. This annual affair as usual, was visited by a large number of persons, and was acclaimed by those who have known it for a long series of years, as being one of the best and largest held under the auspices of the society. The highest award, a gold medal was won by R. H. Jones, gardener to Mr. W. W. Butler, with capitally flowered orchids disposed over a groundwork of ferns. This exhibit covered a space of 180 square feet.

Mr. Mackey, gardener to Right Hon. J. Chamberlain, made a splendid show and was awarded the second highest prize—a silver gilt medal.

Messrs. Moore, Ltd., of Rawdon, Leeds, showed beautiful species and hybrids, receiving a silver medal.

Yorkshire (Eng.) Gala.

This, the great event of the year in the northern country, took place at Bootham Park, on June 16, and two following days. The trade exhibits were very numerous and extensive, and contributed largely to the success of the show. Groups of flowering and foliage plants were staged to the number of six, and these were of unusual character. In these exhibits, the matter resolved itself into a competition of skill in arrangement, and the merits of the various plants of which the group consists; the former being probably of the greater value. The specimen stove and greenhouse plants, so greatly fallen, and so undeservedly so, from their pride of place were shown by Jas. Cypher & Sons, of Cheltenham, who keep up the old tradition.

Tuberous rooted Begonias were grandly shown by Mr. Winn, of York, and large specimen fuchsias, a York specialty, were conspicuous objects. Roses were of fine quality, and very numerous, and fine H. P.s, and pillar plants were observed. The largest class, that for 12 cut blooms, was contested by three trade cultivators, and the leading prize was taken by G. Mount of Canterbury.

FREDERICK MOORE.

AMERICAN CARNATION SOCIETY.

Carnations Registered.

The following new carnations have been registered during the past season, with The Perpetual Flowering Carnation Society of England. Growers on this side will please take notice to avoid duplication of names.

Hon. Mrs. Francis Agar, deep rose pink. Registered by the Hon. Francis Agar.

Mary Vilren, rose. Registered by Blackmore & Langdon.

Ranston Gem, sport from Boyes' Victory, apricot and orange. Registered by Sir Rand L. Baker, Bart.

Rose Dore, golden rose. Registered by W. B. Lanchester.

Golden Glory, yellow. Registered by Heath & Son.

Ethel Whitney, crimson. Registered by Gore & Whitney.

Charles, crimson. Registered by C. Engelmann.

Rex, light pink. Registered by C. Engelmann.

Burroughs Scarlet, scarlet. Registered by E. T. Johnstone.

Black Chief, crimson. Registered by Hugh Low & Co. A. F. J. BAUR, Sec.

Dear Sir:

BUSH HILL PARK, ENFIELD, MDD'X, June, 1909

HUGH LOW & CO. Dissolved

In consequence of the voluntary Dissolution of my late Firm, I have much pleasure in informing you that I have taken over the Royal Nurseries with the greater part of the stock. These Nurseries were formed by me in 1881, under the instructions of my late Father, and since his death, I have taken an active part in the direction of the business.

The staff which is transferred, practically intact, includes such well-known men as my representatives — Mr. Harry A. Barnard, Mr. F. W. Ashton, and Mr. Laurence J. Cook. Mr. Edward Tack as Orchid Specialist and Grower, and Mr. M. C. Allwood, the enthusiastic Carnation Man. Messrs. Moore, Reid and Meades, amongst the Roses and Fruit Trees, and Mr. Phillips in the General Department.

I feel that with such men at my back, clients can rely upon the same care and attention being given to their business as under the old regime.

Esteeming your orders and enquiries, believe me to be always at your service as heretofore.

Please address all communications

Obediently yours,

STUART LOW & CO.,

GERANIUMS

ARE A SPECIALTY WITH US

A Gentleman well known in the Horticultural world said a few days ago when looking over our place, "Generally when we think about Vincent we think about Geraniums." That's all very well, but what we want you to do is when you think about "Geraniums" to think about "Vincent," and if you will think about what you are going to grow next season, soon, and will write us we will give you a special price that will interest you, to the extent, that we will have your order booked by return mail. This will enable us to gage our propagation to better meet the demand. The Collection we are offering for next season will without a doubt be the best commercial collection ever offered to the American Trade.

Easter will come next spring March 27th, so you will want to get your Geraniums in good time, and by the way, is there not more sure money in good Geraniums than in some other stock generally grown for Easter?

FOR IMMEDIATE SHIPMENT

We will send 1000, 50 each of 20 good distinct kinds, our selection of either single or double, from 2 in. pots, for \$18.50; from 3 in. pots, \$25.00, Cash with Order.

THE DEVELOPMENT OF THE FLORIST BUSINESS.

The above is the title of a paper read by F. Danzer before the Detroit Florist Club. Mr. Danzer gave a brief review of the beginning of the florist business, tracing its advancement in commercial importance, artistic results, cost of merchandising, etc., down to the present time with many interesting statistics gleaned from the census reports. He paid a hearty tribute to the pioneers and their wisdom in laying the foundation of what is now so important an industry and said that the future holds out the prospects of an equally notable advancement from conditions as now existing. He advocated the separation of producer and retail dealer, if either is to rise to his fullest possibilities, and had an appreciative word to say on behalf of the street fakir as an educating influence.

Concerning the retailer and his work he said:

"The florist, unlike any other industry, has, so to say, chosen the public as his partner. We are constantly straining our nerves to secure larger flowers, better flowers, still we do not ask any higher prices. Putting the ear to the ground, we can hear the grower growling because the retailer does not pay any more than usual, still were it not for that our ware would not be in demand as it is. The grower may be put to some additional expense in producing the higher grade of flowers, but still much greater is the expense the public has put on the retailer in selling and arranging and delivering."

"Why do we confine ourselves to so few flowers? Truly carnations and roses are favorites, but only because we make them such. There are many others which deserve our attention and the public will be very thankful for it. In fact, our future development depends on the production and evolution of a much larger variety of cut flowers. In line with other industries which are bringing forth new products to entice the buying public, and as our forefathers in the business have done, so must we profit by their experience, and, producing new varieties, in the broader sense place a distinguishing mark between the trader at the curb and the legitimate florist."

ROCHESTER NOTES.

Messrs. Purcell & Craig are well under way with their two 28½ x 150 foot rosehouses.

Geo. Boucher contemplates extending his greenhouse plant on Averal Avenue as well as making some minor alterations in his store.

Messrs. Crossman Bros. have this spring had to import several thousand S. A. Nutt geraniums on account of the great demand for this favorite.

Salter Bros. are experimenting with the "X. T. C. Dandelion killer," using the E. C. Brown Co.'s auto spray-pump. Results are, up to the present, doubtful. A. PENGEL.

BUSINESS CHANGES.

Moline, Ill.—Peterson & Eckstam Bros. have purchased the greenhouse business of G. A. Stephens.

Winchester, Tenn.—Aubrey Frink has disposed of his interest in the Barber-Frink Co. and is to take a position as manager of the Tennessee Wholesale Nurseries.

THE NIAGARA CONVENTION.

The 27th annual convention of the American Seed Trade Association, which closed last week after a most harmonious session, was in many respects the most satisfactory ever held. In point of attendance it undoubtedly exceeded any previous convention of the Association, while the beauty and magnificence of the surroundings made it one long to be remembered with pleasure by all who were fortunate enough to be present. Owing to the natural attractions of the place, a larger number of ladies than usually attend the convention were present, which completed a picture and surroundings at once most grateful to heart and eye.

Many Ladies at the Convention.

It would no doubt be pleasing to mention the ladies personally, and describe their beautiful toilets individually but as the writer is not a society reporter and not conversant with the terms employed on such occasions, and moreover as it is impracticable to mention each and every one by name, it is best not to mention any, but it may be said of them collectively that a more charming and lovely aggregation has rarely graced any convention. The presence of ladies is always a steadying and restraining influence and on such occasions the greater the number of ladies the better behaved are they of the genus homo.

High-Water Mark on Behavior.

By the way, it might be said in passing, that in respect to orderly behavior of the men in attendance this convention has certainly set a high water mark. In fact so very orderly and quiet were they, that a few sighed for a little of the leaven which "leaveneth the whole lump." It was a dry convention, taken as a whole—not necessarily so, of course, but even at the banquet it was a desert, save for a few cases where those present furnished themselves the cup that cheers but did not inebriate.

A Presentation.

After the close of the convention, and the election of officers for the ensuing year, the ceremony, which has now become a fixed custom, of presenting the retiring president with a token of esteem, was carried out in the large ballroom of The Clifton. In the presence of the members of the Association and the ladies, retiring President Watson S. Woodruff was presented with a handsome souvenir of the occasion. The presentation speech was made by W. F. Wood, of Louisville, Ky., and was both bright and brief, and it was feelingly responded to by Mr. Woodruff. Mr. Wood referred in

warm terms to the prompt, business-like way in which Mr. Woodruff disposed of the business of the convention, and it may be said to have been the almost unanimous sentiment of those present.

PRESENT CROP CONDITIONS.

Information as to crop conditions are more or less conflicting, but it seems about as follows: Sweet corn is looking well, though a little backward. Its condition in Ohio and Nebraska is somewhat better than in the east. Beans are hardly more than started, hence only the future can determine what the crop will be. Peas are looking well, though in Michigan rain is needed. No serious damage has yet resulted but unless rain comes soon, there will be another story to tell. In Wisconsin conditions are generally favorable though the crop is late, a fact of more or less significance. Canning has become general in New York state with prospects for a fair crop. Operations are just commencing in Wisconsin, and a week or two more will enable us to get a definite line on the crop. As to small seeds, garden beets will be short, and prices will range at least 50 per cent. over the past few years. Radish will also be short with a corresponding advance in prices. Onion seed will be somewhat short on the red flat varieties also the yellow flats, and the whites. Information to hand is only general, and some weeks must elapse before anything definite can be given. Lettuce is also said to be on the short list, but this is all that can be said of it at present. As the situation develops it will be given by HORTICULTURE from time to time, and readers may rely on the general accuracy of these reports.

NOTES.

See "During Recess" for account of the Burpee-Maule ball game.

W. Atlee Burpee and Howard M. Earl arrived home from their western crop inspecting tour, June 28th.

Crimson clover seed has advanced from 3 1-2c., which was the market price about three weeks ago, to 7c. The market is practically cleaned out.

J. K. M. L. Farquhar of Boston, sails for Europe on Saturday, July 3, and will make an extended business tour among Continental horticultural centres.

William Allen, superintendent of Homewood Cemetery, Pittsburgh, remonstrates against that part of our notes in last week's issue in which our correspondent refers to "the finest pansies ever seen in the district" as raised from Mr. Allen's own strain of seed.

AMERICAN SEED TRADE ASSOCIATION

AMERICAN SEED TRADE ASSOCIATION.

Continuation of Convention Report from Last Week's Issue.

On Wednesday, June 23, Prof. C. A. Zavitz, of Ontario Agricultural College, delivered a paper on "Root Crops" which proved interesting and was well received. It gave results of careful tests conducted by the Agricultural College, Guelph, Ont., showing comparisons between production of seeds of mangels, swede turnips and carrots home-grown as compared with imported seeds of same class. On the whole, home-grown has proved higher in germination and more productive of roots than the imported. A large amount of work has been done to determine the influence of different selections of seed upon the resulting crop. In the ninety-four distinct experiments conducted with large, medium-sized and small seeds, in eighty-five per cent. of the separate tests the larger seeds produced more heavily than the smaller. In a series of experiments in planting root seeds at different depths in soil through a series of years, on land of lower and higher levels, average clay loam soil, five years with mangels and sugar beets, four years with swede turnips and carrots, records showed best results at half inch below the surface. Five years' experiments thinning roots at different distances apart in the row shows as distance increased average size of root increased in crop with decrease in percentage of dry matter, and also in yield of roots per acre. In five years' experiments sowing sugar beets in rows at different distances apart, by having rows closer together furnished larger yield of roots and larger yield of sugar per acre. In thinning sugar beets at different stages of growth in each of five years the greatest average yield per acre was obtained when thinning the plants when about two inches in height.

Edgar Brown, botanist in charge of the seed laboratory U. S. Dept. of

Agriculture, Washington, D. C., gave a short address explaining something of the work the department is doing in investigating the purity and quality of seeds, etc. He said that he realized that a large amount of poor seed is sold every year and that the reason that so low a quality is sold is because the farmer very largely wants something that he can get cheaply. He does not want to pay the price for good seed. The department wishes to show him his mistake by making it possible for him to know what he is getting. The result of the work being done will be to increase the market prices for good seeds. That the general average of increase in quality is progressing has been shown during the past year, the samples being taken by the department indiscriminately showing a marked improvement, and greater care is being exercised by the seedsmen in the examination of stock they are buying and selling. He said that many are availing themselves of the opportunity to visit the testing laboratory during the summer, and extended an invitation to all whom they might be able to accommodate to visit same about the 13th of July and for six to eight weeks thereafter. The address was well received and the apparently perfectly fair attitude of the speaker was commented on favorably; he was however, subjected to a rapid fire of cross questions as to the methods of testing used, and as to the reason why there have been so many state laws introduced of so heterogeneous a character during a comparatively recent period. The speaker parried or answered all questions skilfully and contended that the department had not instigated any legislation while they were certainly not in a position to control the same, and properly direct it. Messrs. C. F. Wood, F. C. Woodruff, Wilson, Dickinson, Albert McCullough, Peppard, Ebeling, Vaughan, Dibble and Green, took part in the discussion.

At the Wednesday afternoon session an address was delivered by Prof. L. H. Bailey, Director N. Y. State College of Agriculture, on "A Campaign for Rural Progress." He said that as

there is a city phase of our civilization so there is a country or rural phase, and it is as necessary that we should develop the one as the other, but we have heretofore given our attention chiefly to the city phase; more attention should be directed to the needs and development of country life. Our attention to the rural question has been largely on the side of making farms more profitable; but while agriculture for profit is a phase of country life not to be despised, it is not all of country life. The country people must live their own lives along broad lines as well as city people do theirs; they must have their institutions, their recreations and their outlook on life. All these will contribute directly to the national life and welfare as well as to the welfare of the city people as the country people themselves; therefore it becomes a question of broad public policy for every one to interest himself in these problems. We must bring the intelligence of all the people to bear on these great rural questions in order that we may develop the rural civilization which will permanently satisfy the man of ideals and which will be a worthy contribution to the civilization of our time. The foregoing brief resume of the more salient and main conclusions does not do justice to the breadth of view and comprehensive character of the address.

A vote of thanks was returned to Prof. Bailey on motion of Mr. Crossland. A paper by Mr. J. M. Lupton, of Mattituck, L. I., N. Y., closed the afternoon's proceedings.

At the banquet Wednesday evening five-minute talks were given by Henry W. Wood, J. C. Robinson, E. L. Page, Geo. S. Green, Kirby White, Charles Dickinson, S. E. Briggs, F. C. Woodruff, C. F. Wood, J. C. Vaughan, Arthur B. Clarke, Curtis Nye Smith, Harry L. Holmes, Chas. N. Page, followed by an interesting lecture on Color Photography, illustrated with views from nature, by J. Horace McFarland, Harrisburg, Pa. The lecturer briefly sketched the scientific side of the Lumiere autochrome system of color photography, and referred to previous processes attempted. By far the

AT NIAGARA FALLS, ONTARIO.

most interesting part of the lecture to those not concerned in the technical aspects was the presentation of fifty or sixty examples of the autochrome, which were shown by a specially arranged stereopticon illuminated by a powerful electric light. The most delicate gradations of color in flowers, plants, trees and manufactured objects were noted. An extraordinary series of pictures of Niagara Falls showed the sheen and tint of the water apparently almost in motion. The commercial application of the process was illustrated by autochrome reproductions of work done from autochromes. Catalogue covers and the like were thrown on the screens in the exact colors in which the original appears, together with a separate showing of the printing process which intervened. The lecture was an interesting presentation of a novel and important process new to most of the audience.

Recognizing the efficient services of Secretary-Treasurer Kendel and his manifold duties he was voted an increase of salary of \$100.

Announcement was made by Albert McCullough of the formation of a new organization in no way antagonistic to the parent organization, to include the wholesale grass dealers. Mr. McCullough wished it clearly understood that the new association would in no way detract from the weight or influence of the parent organization.

On motion a joint committee to be composed of the Chairmen of the Committees on Tariff and Customs, Seed Legislation and Postal Laws was created to confer with similar committees of the American Florists, and American Nurserymen on matters of importance and mutual interest. The usual appropriation was voted for the National Council of Horticulture, to continue its work in the interests of the seed trade. Secretary Kendel spoke in highly complimentary terms of the work that has been done by this organization.

President Woodruff called attention to the presence of the following ex-presidents in attendance at this convention: J. C. Vaughan, '92; Albert

McCullough, 1890 and 1900; S. E. Briggs, '95; Jerome B. Rice, '02; Walter P. Stokes, '03; S. F. Willard, '04; Chas. N. Page, '05; W. H. Grenell, '06; Henry W. Wood, '07; Geo. S. Green, '08; and at his suggestion a group photograph was taken of the foregoing after the adjournment of the convention.

In accordance with custom no city was voted on, but invitations were read from Atlantic City, Denver, Niagara Falls and Saratoga, as 1910 convention cities; an informal ballot showed a majority favoring Atlantic City, but the matter is referred to the Executive Committee.

Mr. S. F. Willard, of Wethersfield, Conn., an ex-president and also ex-member of the Connecticut legislature, proposed the name for honorary membership of Mr. E. L. Coy, of Melrose, Mass., formerly of New York state, to whom he referred as a veteran seed grower, well known to most of the membership, whose long and honorable record in the seed business renders him highly deserving of such honor. The nomination was seconded by Mr. F. W. Bolgiano, of Washington, approved by Pres. Woodruff as required under the rules, and agreed to by a unanimous vote.

To Mr. Chas. Dickinson was accorded the honor of escorting to the chair the newly elected president, Mr. J. C. Robinson, who responded in a neat speech, which evidenced his full appreciation of the responsibilities of the position and his own willingness to do all in his power to fulfil them properly. In Mr. Robinson the Association secures the services of a man of excellent tact, good judgment and kindly nature who will give it strength particularly in the section from which he comes. Mr. Robinson felt that his residence west of the Mississippi, though not far from the center of our common country, might make it difficult for him to be in as close touch as he would desire with the Eastern membership, and he therefore urged that all members advise him frequently and fully as to the needs of the Association. Mr. Robinson's election was unanimous.

As a reward for his attempt to decline the honor of the office of First Vice-President, Mr. Duryea was threatened by Mr. Green with being made perpetual vice-president, and Mr. McCullough told him if that was not enough to make him sit down and stop declining election they would all agree to elect him to the first and second vice-presidencies as long as the Association lamp held out to burn, and then Mr. Duryea concluded to say no more but to accept.

Immediately after the close of the convention everybody repaired to the ballroom, where Mr. and Mrs. President Woodruff were delighted by Mr. C. F. Wood of Louisville making presentation in his graceful and happy way of solid silver compotes and bon bon dishes and some beautiful designs of belt buckles with the maple leaves embossed thereon. Mr. Woodruff responded warmly, and the conclusion of this delightful incident marked the close of the convention.

SWEET WILLIAMS.

The double and single sweet williams (*Dianthus barbatus*) were in attractive display during our last visit to Dreer's at Riverton, N. J. One of the best of the collection is the Newport Pink. This variety is strikingly brilliant in color and is exceptionally large as to truss and is borne on long stems. It is now considered very valuable for bedding purposes from mid-season on. Also fine for cut flowers. Another good one for cut flowers is the hybrid everblooming sweet william (*D. latifolius*) of which we saw some fine specimens. The *barbatus* and *latifolius* do best raised from seeds every year instead of by dividing the old plants as is done with varieties like Napoleon III.

Messrs. Lager & Hurrell, Summit, N. J., request that we correct an error in their advertisement on page 860, in our issue of June 19, in which *Brassavola Digbyana* is quoted at \$9.00 per 100 and \$60.00 per 1000 for plants with five to six bulbs—\$9.00 per dozen and \$60.00 per 100 is what was intended.

Flower Market Reports.

BOSTON The most concise and near-truth report on the condition of the Boston market at the present time would be, "There isn't any market." We are indisputably at extreme low tide, partly because low tide is due about this date and partly because of the extreme torrid weather which has sent people away and shut off all disposition to buy flowers and has at the same time hit the flowers themselves so that very few of them are worth buying. The only exceptions to the prevailing demoralization are lily of the valley, orchids and Beauty, Carnot and Kaiserin roses from cold houses. Everything else is unsalable. Bride, Bridesmaid and Killarney roses are mildewed and discolored to an extent never paralleled. Carnations, Jacq roses and indoor sweet peas are as bad as they can be. The latter are supplanted by the outdoor crop which is now beginning to appear in fine shape and should sell readily if there was any sort of a demand.

There was no scarcity **BUFFALO** in any one line of cut flowers the past week and although weddings and graduations were at their height there was sufficient stock to supply all who were in want. As several schools (including high schools) were prohibited the use of flowers during the commencements it was scarcely felt by the florist but the matter has now been placed in the hands of a good committee who will, another season, look after the in-

terests of the dealers at large. The sale of Beauties and other stock was better than in previous years but peonies and outdoor peas coming in so heavy have taken the place of roses and carnations, and while sale of the latter has been good it might have been 100 per cent. better had the severe hot weather held off until a week later. Loads of everything were coming in on Friday and Saturday and while trade was active it could

not absorb the quantity of material received, especially peonies, peas and ordinary quality roses and a portion was carried over awaiting the cemetery florists who only had to name the price. With the thermometer registering 88 on Sunday and Monday, the market is receiving quantities of everything, carnations asleep, roses all full blown and the buyers have practically their own way.

FLOWER MARKET REPORTS.

(Continued from page 10)

Considering the hot **CHICAGO** weather trade is regarded as normal by those florists having a large shipping trade. To those who depend upon the local outlet for their flowers conditions are quite different. In fact, for them business is at a standstill. There is so little demand for stock and the market is so heaped with all kinds of material, good, bad, and indifferent, that any price is accepted when a customer really wants to buy. An unusual amount of rain has fallen during the latter half of June and the temperature has averaged high, a condition that has not improved the quality of the stock. Many growers are throwing out their rose plants, reducing supply. Good Kaiserin roses are especially scarce. Beauties are in heavy crop but the sales are slow. For the most part Killarney is the mainstay in the rose line and it is holding up well. Florists begin to wonder how they got along before this rose made its ap-

pearance. Carnations are selling at a price that does not pay for the labor of picking and marketing, if indeed they sell at all. Peonies are still flooding the market, but no price can be said to be established. They have had a long run and on the whole a prosperous one. Here, as with the carnation, it looks very much to many as if we had reached a stage of overproduction though the building of more greenhouses and the planting of more peony beds goes merrily on. Lily of the valley seems to be the one flower for which there is a steady demand. It is having a rival this year in the orchid as a wedding flower. Indoor peas are being replaced by outdoor stock. A light frost June 18 killed tomatoes and corn near Chicago.

NEW YORK

The stillness of summer has descended on this market with a thoroughness and positiveness that is unmistakable. It has taken place more suddenly and earlier than usual and nobody expects to see any material change in conditions for many weeks to come. The variety and quantity of

material coming in is rapidly falling off, but not comparably to the deterioration in quantity which is seen on all sides. Of most flowers good stock is hardly to be found. Loughforium lilies are an exception and are equal to the best ever offered at any season of the year, but they are hopelessly overloaded—probably five times what the market can possibly absorb and a heavy loss to the growers seems inevitable. The New York market is wonderfully elastic when it comes to roses, carnations, peas or violets and the limit of its capacity for these things at some sort of price is rarely reached. On the other hand the lily is, and probably always will be, in a different class and over-stocking is likely to mean absolute loss. Peonies from cold storage are of excellent quality, but the outlet for them is about finished. The first asters of the season have appeared—good quality, too. Pond lilies—the coolest, most seductive material in the whole line—just now form a very general and appropriate adornment of the florists' windows.

WANTED—Second-hand bags and bur-lap, any kind, any quantity, anywhere. Richmond Bag Co., Richmond, Va.

FLOWER MARKET REPORTS.

(Continued from page 2)

PHILADELPHIA Last week—June 21st to 26th—probably saw the

last of the good business of the season, so far as commencements and such affairs are concerned. Stock now coming in is of but poor quality, and there is nothing of extra grade in sight to stimulate business. The quantity of inferior grades arriving is enormous—much greater than the market will absorb. In fact there is hardly any call for such—and it practically lies over until the end of the week; and is then cleaned out for almost nothing or else sent to the dump. A sharp advance in the price of American Beauty roses took place on the 28th ult. (nearly 25 per cent.) in consequence of a rather general clearing of benches among the growers to make room for new planting. Kaiserin roses are all to the good among the whites at present, and for pink it is—My Maryland. Everybody asks for the latter in preference to any other pink at present. Carnations are very small flowers and inferior generally. There will be a crop of outdoor carnations in a few days—mostly Crocker, Enchantress and Queen. The outdoor varieites are not generally large, but they are usually very durable and sell at reasonable figures. A few outdoor gladioli are now coming in; but so far, they do not compare with the under-glass May, Shakespeare and America. The sweet pea crop is very fair considering the hot weather of the past week. Orchids, water lilies, white Japanese irises, gardenias and candidum lilies are normal as to supply, quality and demand. All the minor items are plentiful and bring up the reluctant tail end of a sluggish procession.

INDIANAPOLIS Real summer weather has set in, an average of

about 90 degrees in the shade. The stock coming in shows the effect of this extreme heat and is rapidly deteriorating. American Beauties, Killarneys and Kaiserins have the call and are fine, equal to any seen here during the winter season. There are still a few storage peonies which come in fine shape and are used to good effect in decorations. The sweet peas are particularly fine this week owing to the absence of the heavy rains. Good lily of the valley and orchids are a trifle scarce. Elaborate wedding decorations are fewer this June than for several years past, a very strong feeling of simplicity being in evidence in this line. There never was such a scarcity of Boston ferns as at the present time. Ferns and boxwood trees are in evidence by a big majority in every way that they can be used, hence the scarcity.

ROCHESTER Trade has dragged some and the week has been quiet. Our

commission salesman, Geo. Hart, reports that shippers were badly mistaken, commencement being over so that it was impossible to obtain any particular market prices, and he had to take practically any price offered. The market is glutted with carnations. We look forward to the finish of early outside stocks to steady prices a little.

CHICAGO NOTES.

An Up-to-Date Well.

Poehlmann Bros. Co. have just completed a large well or reservoir at the place at Morton Grove. A large iron ring or band with the lower edge sharpened was used to circumscribe the excavation and as it settled down into the ground as the digging progressed, rings of cement blocks were placed one after the other on the top of the iron ring and following it down until the desired depth, 25 feet, was secured. These blocks were constructed on the place. They were grooved on top and bottom and ends so as to fit closely and make a tight cement wall. This process being somewhat out of the usual, it may interest our readers to know about it. Anything that Poehlmann Bros. do is always worth considering.

Personal and General News Notes.

All wholesale stores are closing now at 5 p. m.

Ernest Farley will spend a two weeks' vacation at Indianapolis, Ind.

C. M. Dickinson and family are resting at their summer home at Pelican Lake, Wis.

A movement led by Bassett & Washburn is on foot to close Sundays during July and August.

Mr. and Mrs. Strail will spend three months at Twin Lake, Mich. Mr. Strail is employed with A. Lange.

Otto Benthley of New Castle, Ind., will be married July 1st to Miss Betty Koepke of Chicago. They will reside in New Castle.

Nick Wietor and John Sinner leave for their annual outing in northern Wisconsin next week. They will be gone two weeks.

No action was taken regarding the giving of flowers to the school graduates. The matter will probably be laid over another year as usual.

Mr. McKellar says Cattleyas Mendellii, gigas and Mossiae are now in and the demand is fairly good, considering the glut in nearly all other lines.

H. S. Morton reports a pleasant time in the West and expects to remain till October. He will go south through California, Texas and other states.

The annual picnic will take place at Riverview Park Thursday, July 22nd. Manager Ed. Enders has secured what he considers favorable terms from the Riverview people.

The friends of W. J. Smyth who suffered a severe injury in an automobile accident as reported last week, will be pleased to learn that he is doing well and is as comfortable as could be expected under the circumstance.

Visitors this week: R. E. Tuttle and

wife, Momence, Ill.; C. B. Knickman, representing McHutchison & Co., New York; H. A. Fisher, Kalamazoo, Mich. Mr. Schaefer of the LaCrosse Floral Co., stopped over for a short visit on his way home from England.

O. P. Bassett and grandson, E. B. Washburn, left Sunday for an extended automobile trip. Their first stop was at Detroit where they were the guests of Phil Breitmeyer. They will visit Toledo, Cleveland, Niagara Falls, Washington and other eastern cities.

A Lange with his wife and son are about to start for the Pacific coast. They will stop at the exposition at Seattle, then down the coast to Los Angeles, coming home by way of Colorado and Nebraska, where they will visit Mrs. Lange's parents at Omaha.

R. E. Tuttle, formerly with J. C. Vaughan and well-known to the city trade, has bought the W. B. Smith Co.'s greenhouses at Momence, Ill., and takes possession this week. Mr. Tuttle has been there for some little time and likes it so well that he has purchased the business for himself.

Report has reached here that Joseph Smely, a well-known florist of Aurora, Ill., was severely scalded last Saturday. He had been to Chicago and returning home feeling somewhat overcome with the heat was preparing to take a bath before retiring. He somehow lost his balance and fell in while the tub was filled with scalding water. He was taken to the Aurora hospital.

Uncle John Thorpe has again been suffering from a relapse. He grows feeble with each new attack and his condition is considered very serious. He is constantly remembered with gifts of the choicest flowers. A portrait of Mr. Thorpe as first president of the S. A. F. will appear in the Chicago Daily News in a souvenir number to be issued prior to the S. A. F. convention at Cincinnati.

NEWS NOTES.

Cleveland, O.—R. Hoffman has started in the florist business at Miles avenue.

Topeka, Kan.—Joseph Bleier has added the cultivation of tomatoes and cucumbers to his present florist business.

Everett, Mass.—The board of aldermen has passed an order for borrowing \$1,500 to repair the greenhouses at Glenwood cemetery.

Providence, R. I.—E. Brooks of the T. J. Johnston Co. was the largest purchaser of the stock of the Keller Co. at the auction on June 18.

Boyetown, Pa.—W. S. Funk & Son, florists, have erected a two-story office building near their greenhouses, and have installed an electric motor.

During Recess

John Westcott's Opening.

The annual opening of the club house at Waretown, on Barnegat Bay, devoted by big-hearted "Commodore" John Westcott to the enjoyment of his friends in Philadelphia and elsewhere, under the appellation of the "Waretown Rod and Gun Club," took place under favoring auspices on Friday, June 25. There were present about twenty gentlemen, including such well known individuals as George C. Wat-

The Burpee-Maule Ball Game.

Saturday, June 26th, was a big day at Fordhook Farms, Doylestown, Pa. The Maule and Burpee forces departing from their usual program of brain against brain, indulged in a contest of brawn against brawn—in the shape of a ball game. Geo. Reynolds, on behalf of the Burpee forces, acted as master of ceremonies in the absence of Mr. Burpee and Mr. Earl, who had not yet returned from their western tour.

WARETOWN CLUB HOUSE

Front View.

son, W. K. Harris, Robert Craig, Robert Kift, James Dean, H. B. Beaty, Wm. J. Stewart, Edwin Lonsdale, John Burton, David Rust and George Anderson, and for the period of three days joy was unconfined. A pleasant feature of the occasion was the presentation of a desk and bookcase, well stocked with reading matter, to Mr. Westcott on behalf of the Philadelphia contingent; Robert Craig, the silver-tongued, being the spokesman. Mr. Westcott's chief regret seems to be that the accommodations are not sufficient to take care of several hundred of his friends at one and the same

About thirty of the Maule clan—ladies and gentlemen—including Wm. Henry himself and his manager, Mr. Dungan, attended and were hospitably entertained by their friendly opponents. A special car was chartered to take the 48 representatives of the Maule contingent to Fordhook. The spectators were figured to number at least 150. Score—14 to 6 in favor of Burpee. The Maule team won last year, so now honors are even. Congratulations and condolences!

The Baltimore Gardeners' and Florists' Club have selected July 15 for

WARETOWN CLUB HOUSE

Rear View.

time, but there will be many "week ends" between now and frost time when congenial spirits may gather under the hospitable roof of the Waretown club house. Mr. Westcott's favorite proverb, "He who lives for himself alone works for a very mean man," has its exemplification by contrast in the spirit that pervades this delightful rest spot and the unremitting efforts of its presiding genius to make everybody comfortable and happy every minute of their stay.

their picnic and Bay Shore Park for the place.

The New Orleans Horticultural Society will have its summer outing at Milneburg on July 15. Officers will then be elected.

CLUB AND SOCIETY NOTES.

The Rhode Island Horticultural Society held their rose and strawberry show on June 23, at Providence, with the usual variety and quantity of ex-

"Every Bug Has His Dose."

Insect-destroying preparations that do their work well and effectively are the cheapest. Bowker's Arsenate of Lead and Bowker's Pyrox are recognized standard insecticides and fungicides for both indoor and outdoor use. Bowker's Insect Emulsion destroys many kind of plant lice, black and green flies, etc. Call or send for catalogue.

BOWKER INSECTICIDE COMPANY
43 CHATHAM ST. BOSTON

hibits, but many were not up to the standard on account of the excessive heat of the previous days and a shower in the early morning of Wednesday.

The Chicago Florists' Club will hold its last meeting for the summer next week and appoint its committees for the convention.

At the show of the Worcester County (Mass.) Horticultural Society on June 24, the display of peonies made by George C. Thurlow, which included between 60 and 70 varieties, was a leading feature. Roses were shown in great variety. The strawberry display was never better. Philip Cunningham, gardener George Butler, showed a new berry—the Uxbridge—which was regarded with favor. George McWilliam had some extra large and finely-narrowed Corsica and Pride of Michigan.

The Florists' and Gardeners' Club of Rhode Island met on June 21 at Swarts Lodge hall in Providence. William Appleton was the speaker for the evening, and "Carpet Bedding" was his subject, which he illustrated by attractive diagrams. An invitation from James Hockey of Pawtucket to visit his greenhouses was accepted. The committee for the annual outing was appointed as follows: James Dillon, E. A. Appleton, James Hockey, C. S. MacNair and Alex. Macrae.

As will be seen by consulting our "For Sale" department, Carl Beers wishes to dispose of his florist establishment in Bangor, Me. Mr. Beers has made a competence in the place and is desirous of retiring. The establishment is in good order and offers an exceptional opportunity for somebody else to make a profitable investment.

OBITUARY.

David Miller.

David Miller, aged 83 years, died at his home at Washington Heights, Harrisburg, Pa., on June 25. Mr. Miller was from a family of horticulturists, and was well acquainted with Downing, Marshall P. Wilder and many of the famous horticulturists of the last century, and his reminiscences were most delightful to listen to. He was also one of those who attended the first meeting of the American Pomological Society. Mr. Miller did a thriving nursery business up to about the time of the Civil War, near Carlisle, but as his trees were too big for the north most of them went to the south, and with the commencement of hostilities the market for his stock was cut off. Since that time he has carried on a nursery business in a small way. His most prominent introduction was the Cumberland raspberry. In the death of Mr. Miller we lose another of the famous old-time horticulturists. Although not so widely known as Downing, Wilder, and others of his contemporaries, he was very prominent locally and looked up to by all who knew him.

Daniel W. Langton.

In the death of Daniel W. Langton, landscape artist, the Hudson County, N. J., park commission, by which he was employed, loses a valuable assistant. Mr. Langton laid out the development scheme for West Side Park and this park will be a lasting monument to his memory. In his profession Mr. Langton occupied an enviable position. During his connection with the County Park Board he made many friends. He was a public-spirited man and possessed a winning personality that made friends for him wherever he went.

His last work in connection with the county park scheme was the laying out of a plan for the development of the tract at Harrison, purchased some time ago.

Mrs. Anna Brill Jordan.

Mrs. Anna Brill Jordan, widow of the late John M. Jordan, of St. Louis, died in Omaha, Neb., June 22, at the home of her son, Harry Jordan, at the age of 75. Mrs. Jordan has been sick for a long time and left St. Louis a year ago to make her home with her son in Omaha. The only one of the Jordan family still living in St. Louis is Willie Jordan, who is in with the City Forestry Department. He went to attend the funeral which was held

on Wednesday, June 23d. Mrs. Jordan was well known in the trade, who extend their sympathy to the bereaved family.

E. W. Stark.

Eugene W. Stark died suddenly on June 15 at the Jewish Hospital, St. Louis, where he had gone for an operation for gall stones. Mr. Stark was born in 1865 and while a young man acquired an interest in the Stark Nursery and Orchard Co. of Louisiana, Mo., and at his death held one-tenth of its stock. He was highly esteemed and has held many public offices. In 1908 he was elected to the senate. A widow and three sons survive him.

John Crosby Brown.

John Crosby Brown, eminent as a banker and philanthropist, died on June 25 at his summer residence in West Orange, N. J. He has been a regular exhibitor at the shows of the New Jersey Floricultural Society for many years and his death is a great loss to that organization. Besides his wife, Mr. Brown is survived by six children.

W. H. DeCamp.

Walter H. DeCamp, nurseryman, died in Cincinnati, Ohio, on June 10.

J. H. DANN & SON, - WESTFIELD, N. Y.

Dear Sir:

BUSH HILL PARK, ENFIELD, MDD'X, June, 1909

HUGH LOW & CO. Dissolved

In consequence of the voluntary Dissolution of my late Firm, I have much pleasure in informing you that I have taken over the Royal Nurseries with the greater part of the stock. These Nurseries were formed by me in 1881, under the instructions of my late Father, and since his death, I have taken an active part in the direction of the business.

The staff which is transferred, practically intact, includes such well-known men as my representatives — Mr. Harry A. Barnard, Mr. F. W. Ashton, and Mr. Laurence J. Cook. Mr. Edward Tack as Orchid Specialist and Grower, and Mr. M. C. Allwood, the enthusiastic Carnation Man. Messrs. Moore, Reid and Meades, amongst the Roses and Fruit Trees, and Mr. Phillips in the General Department.

I feel that with such men at my back, clients can rely upon the same care and attention being given to their business as under the old regime.

Esteeming your orders and enquiries, believe me to be always at your service as heretofore.

Please address all communications

Obediently yours,

STUART LOW & CO.,

Bush Hill Park, Enfield, Midd'x, England

GERANIUMS**ARE—SPECIALTY—WITH—US
FOR WINTER BLOOMING**

We have an immense stock ready for shipment from 3 in. pots, in a splendid assortment at \$3.00 per 100, \$25.00 per 1000. We will send one thousand in twenty good kinds, our selection, for \$25.00, good stocky plants from 3 in. pots.

MRS. LAWRENCE, is an exceptionally fine variety; our Geranium Catalogue describes it as follows:—This is, without exception, the finest Geranium in its color that we have ever seen; clear, healthy foliage; splendid dwarf, compact habit of growth; wonderfully free in flowering; indispensable as a pot plant, being strongly recommended for winter blooming; unsurpassed as a bedder. The color is an artistic shade of bright satiny salmon pink, slightly tinged white. We are satisfied its distinct and graceful form will place it in the front rank of its race.

FROM 2 IN. POTS \$3.00 PER 100; 3 IN. POTS \$4.00 PER 100.

New French Chrysanthemums

Group of Calvat's Chrysanthemum Novelties.

At Tours and at Paris large numbers of chrysanthemum novelties are shown each year. But most of the French growers have little idea of the kind of flower suitable either for English or American taste. I take it from what one sees in American papers that large pure colored varieties are chiefly in demand. From this point of view Calvat's novelties are practically the only ones worth our attention. Of these I give a list of what I consider the best of his new seedlings as shown at Paris last November. These won for him a grand prix d'honneur. The group is shown in the accompanying picture. The award made is the highest ever gained by a chrysanthemum raiser and as a result, Calvat was made an officier d'academie.

Ferdinand de Bievre. A Japanese with florets of great width; flower of spreading form, pale yellow; one of the biggest shown.

Reine Fiammette. A full double flower having medium sized florets forming a reflexing Japanese of the old type. Bright rosy pale amaranth with purplish shading.

Rachel L'Abbe. Immense Jap., with narrow, twisted and intermingling florets, curly at the tips; color white, slightly tinted green in the centre.

Mme. E. Bonneford. Another huge Japanese of a high order of merit. A graceful, reflexing flower, very full and double; color rich apricot passing to golden yellow.

General Samet. Another Jap. of great solidity; medium sized grooved florets, curly at the tips; golden yellow.

Souvenir de Mme. Gagnaire. Japanese also of the largest dimensions with very long florets; bright pinkish rose with reverse of silver.

Claudius Denis. A medium sized Jap., very deep in build with narrow florets; golden yellow.

Mme. Travouillon. A monster Japanese shown in fine form at Tours; a spreading long petalled variety full to the centre; bright lilac rosy mauve.

Belle Trouchoise. A big imposing Jap., very effective in its rich shade of reddish salmon rose; reverse golden.

Rev. W. G. Sharpin. A Japanese of the greatest possible size and substance. Inside of the grooved florets which are of good breadth the color is dull old rose; reverse golden yellow.

Belle Estezelle. An immense Japanese with very long, spreading pure yellow florets.

Calvat 1900. A compact Japanese with rather broad florets, tips slightly incurving; beautiful shade of bright rosy amaranth with silvery reverse.

Paul Delaroche. Another monster Japanese; florets of

medium size, twisted and intermingling; color pearly blush, slightly tinted and shaded lilac mauve.

Miarka. An old type of incurved of large size; grooved florets, a deep solid bloom; color pure white slightly tinted.

Alceste. A fine Japanese of great merit; florets of medium size and good length; color pure pale yellow.

Other seedlings in the group of lesser value from the American commercial point of view were: Ulysse Lafont, a massive Jap., ochre yellow shaded apricot; Henry DeCault, also a huge Jap., pale amaranth; Cecilia Monteil, pure white Jap., shaded pale purple towards outer edge; Dr. Nicolas, Jap., deep violet with silvery reverse, florets rather broad and flat; Thais, Jap., chestnut crimson, golden reverse; Thamard, Jap., purplish mauve, reverse silvery pink; Cularo, Jap., chestnut yellow; Le Maroc, a Jap. of the Edwin Molyneux type, bright crimson with gold reverse.

British Horticulture

SWEET PEAS

There is every prospect of another interesting display being made by the National Sweet Pea Society at their annual show in London on July 23rd. Amongst the trophies offered is the Burpee challenge cup, given for a display of sweet peas, arranged on a space 3x4 ft. It is specified that all the varieties shown must have waved standards. Mr. Burpee's firm also offer prizes for a display of American sweet peas. C. C. Morse and Co., Santa Clara, California, are also offering prizes in other sections. The society has arranged for two outings for this season. A visit is to be made to the seed-growing district in Essex, where a big acreage is set apart for sweet peas. Later in July the members will journey to the University College Gardens, Reading, for the purpose of inspecting the official trials. These trials have proved of the highest utility, many American and continental growers having found them of great guidance for purposes of comparison. The Floral Committee have endeavored to make this part of the work a helpful adjunct to the society's other activities.

ITEMS OF INTEREST

A successful festival dinner was held in London on June 24th in aid of the Gardeners' Royal Benevolent Fund. Many leading nurserymen aided in providing a substantial sum.—The first Masters' lecture has been delivered at the Royal Horticultural Hall by Prof. Hugo de Vries, on "Masters' Vegetable Teratology."—Satisfactory strides are being made by the newly-formed National Vegetable Soc.—Mr. H. Staples, Kentish grower, is bringing out a new strawberry named Geo. Munro—a name well known in fruit trade circles.—The Home Secretary has appointed a commissioner to inquire into certain difficulties which have arisen in the application of the Factory and Workshop Acts to florists' workshops. The present Acts are considered to seriously hamper the trade in dealing with unexpected orders which necessitate occasional overtime.—The membership of the British Gardeners' Association now numbers 1,517. Mr. Geo. Hemming has been elected chairman, and Mr. J. H. Witty, vice-chairman.—A geranium with black foliage and scarlet flowers is being sent out by a Harrogate florist.

W. H. Adsett.

Water Scenery in the Garden

(Continued from issue of June 19)

My previous observations in regard to water scenery, were applicable to natural or artificial sheets of water or streams of several acres in extent; and I now purpose dealing with small lakes, basins, fountains, and streams in the house garden and pleasure grounds proper. With regard to excavation, making the soil watertight, and water supply, outlets and inlets, the previous remarks will apply with equal force; especially the provision of puddling with clay, where the soil is of a porous nature. To omit this always leads to great saturation of the surrounding land, with the invariable effect of causing dampness in the air, and general unhealthiness. In England, Scotland and on the continent there remain to this day many castles and manor-houses, as well as ancient towns, provided with moats, which must have caused a great degree of moisture in the adjacent soil, and given rise in the warm months to ague and other diseases, which were, however retained, owing to the protection the moat and drawbridge afforded.

No rule can be laid down for the shape of a lake; and it may take the form of an oval, a circle, or it may be made devious, and lose itself behind a natural or artificial projection of the banks, a clump of trees, or thick shrubbery. Sometimes the lake may be surrounded wholly with an architectural screen or balustrade with the idea of being seen from a path within the enclosed space and not from without; or there may be a point where the best view is obtained, which may have this architectural kind of treatment; and perhaps a harbor for a few boats; or a permanent low building, as a tea room, a Chinese pavilion or summer house, may be erected of durable materials, and of course ornamental in character as befitting objects in a garden.

The treatment in regard to planting the banks of a lake, and those of a running stream would differ considerably. It may be permissible to form colonies of hardy herbaceous perennials on the former and those shrubs which have a free flowering habit, and do not, as a rule, grow to a very large size.

Quite small lakes may have smoothly kept turf as a surrounding, and a few clumps of flowering plants, grouped sparingly, and a few weeping willows or *Sophora japonica pendula*, or clumps of *Yucca gloriosa* or *Y. flaccida*, *Arundo donax*, *A. d. macrophylla*, *Cornus sanguinea*, *Eulalias* in variety, *Gyneryum argenteum*, *Iris Kaempferi* in variety; *Spiraea aruncus* and others, and *Tamarix*. Clumps of *Myosotis palustris*, *Cotoneaster microphylla*, *Lythrum roseum*, *Trollius europæus*, *Rodgersia podophylla*, *Polygonum cuspidatum*, and *P. compactum*, have a good effect in the neighborhood of water, and there are many others. There are some species of plants which succeed if partially submerged, such are *Acorus calamus* and *A. japonica argentea stricta*, *Caltha palustris* and the double flowered form of this plant; *Carex japonica* and *C. j. pendula*, and the yellow flowered *Iris pseudo-acorus*. *Gunnera manicata*, and *G. scabra*, *Sambucus nigra* and *S. racemosa* and *Hippophae rhamnoides* look well if planted on promontories of the shores, as do *Betula alba* and other birches.

All of the plants named above are of comparatively low growth, the cornus, hippophae, birches and willows excepted. For the sake of variety some coniferous trees might be introduced, preference being given to *Cupressus*, *Juniperus*, *Thuya*, *Retinospora* and *Taxus fastigiata*, all of which have the columnar form, so admirably adapted for contrasting with the horizontal plane of the water.

In districts of the country enjoying a winter climate

of moderate severity, places may be found for various species of evergreens, some having beautiful flowers, as for example *Rhododendron ponticum*, *R. Catawbiense*, and the hybrids from these, and from *R. Caucasicum*; such Alpine species as *R. ferrugineum* and its variety *album*, *R. hirsutum*, and *R. racemosum* from Western China and Yunnan, growing at an elevation of 10,000 feet; the flowers of this last come in close clusters on short lateral shoots, and at the ends of these. They are about one inch in diameter, of a flesh color, passing into bright pink at the tips of the segments. It is a pretty addition to the dwarf section of the *Rhododendrons*. The Ghent and Pontica azaleas, if planted in clumps in suitable soil, would afford brightness of coloring to the planting near to the water. They are of great hardiness, and none of them exceed five feet in height.

The planter is now-a-days a sufferer from the great abundance of material in trees and shrubs, so that, if he be not well acquainted with the nature of the subjects brought to his notice, he is very liable to choose unsuitable plants. In penning the foregoing list, I have had the desire to give a distinct character to waterside planting in the garden proper and different from that of the decorative shrubbery, the planting on the lawns, and other parts of a garden—hence the omission of a host of beautiful subjects.

Bamboos have become of late years recognized plants for the decoration of gardens; and from China and Japan we have received many species which are capable of withstanding a moderate amount of cold, and are admirably adapted in respect of beauty of habit for planting in any part of a garden, and especially on the banks of lakes and streams. To grow them at their best, these plants require a retentive soil, abundant moisture at the root, and to be well supplied with leaf mould—and a sheltered position. Under the general name Bamboos, the genera belonging to *Arundinaria*, *Bambusa*, *Thamnocalamus*, *Phyllostachys*, and others, are included. The more distinct species of *Arundinaria* are *A. auricoma*—a rather strong grower, having green leaves streaked with yellow; *A. Fortunei*, with stems about 3 feet high, crowded together, leaves narrow, 6 inches in length, striped with white; *A. japonica* (Metake), which grows 15 feet high, with internodes of 6-8 inches in length, and tapering leaves, 12 inches long; *A. nitida*, a very attractive, and very hardy species; *A. Simoni*, growing to a height of 12 feet, with leaves one foot in length; very hardy. There is a yellow striped variety of this species, with leaves of a smaller size than those of the type. *Bambusa palmata* is an effective species, the stems reaching a height of 5 feet, and having leaves about 12 inches long, and 3 broad.

Of *Phyllostachys* I may mention *P. Boryana* one of the most effective, and vigorous, and quite hardy; *P. flexuosa*, a neat growing species with 6-foot stems and leaves of shining green color; *P. Henonis* is one of the hardiest species, and it grows to a height of 15 feet. It is one of the most beautiful of the genus; *P. mitis*, which in Japan reaches a height of 50 feet, and in a more temperate climate a height of 18-20 feet; *P. nigra* has stems of a dark color, and plumes of bright green leaves. The stems will reach a height of 20 feet when the plant becomes well established.

The illustration on p. 797 of HORTICULTURE on June 5 shows the sort of excavation—not more than 2 feet in depth made in the grounds, Gunnersbury House, Acton, the property of Messrs. Rothschild. The work was designed, and carried out by his present head gardener, J. Hudson, in Japanese style, and as regards the undergrowth with plants, chiefly natives of Japan. The area dealt with was less than half an acre, and the main idea consisted of several islands connected with each

other by a devious path, carried over rustic bridges of wood. The whole was very effective at the first, conveying a pretty idea, but it is now become greatly overgrown and confused, owing to want of timely thinning out of the multitude of plants originally planted.

Indruck Moore

The Gymnogrammas

These ferns include, from a decorative point of view, some of the most remarkable and interesting plants of the fern family. Probably the commonest of them all is *Gymnogramma sulphurea*, and if one is successful in the cultivation of this variety there need be no hesitation in growing several of the other kinds. The necessary point is to give them stove temperature and as they rapidly become pot bound, plenty of water which should never be allowed to get on the foliage. An exception to the foregoing rule is to be found in *Gymnogramma Japonica* (syn. *Dictyogramma Japonica*) which thrives in an Odontoglossum house temperature, by reason of its being neither tomentose or powdery but of a thick glossy leathery texture. Perhaps foremost among the golden powdered varieties capable of forming rapidly large specimen plants is *G. calomelanos* var. *chrysophylla*; *G. calomelanos* is of larger growth but the powder is whitish or whitish pink instead of distinctly yellow. *G. calomelanos* has a number of forms besides *chrysophylla*, few of which are of much merit. The principal one, on account of the leaflets turning up thus exposing the powder is *G. c. c. Alstoniae*. *G. c. c. Parsonsii*, named after an old confrere of the writer, should not be forgotten—a crested form not exceeding one foot in the length of its fronds. Among the silver or white powdered forms is *G. Peruviana*, considered to be a form of *calomelanos*; of which H. B. May's variety *Mayii* is one of the best, having the powder on both sides of the frond and in a lesser degree on the stalks. Another chance seedling is *G. Wettenhalliana*, golden with very dense crests to its fronds, also having this quality at the tips of its leaflets. *G. schizophylla* is another variety to be found in commercial collections. It makes an excellent basket plant with the remarkable peculiarity of producing plants on its fronds which will freely root when pegged down to a moist surface. *G. tartarea* is one of the most densely powdered (silver) common in collections. This variety is peculiarly distinct on account of its dark stalks which have no powder upon them.

The foregoing varieties and forms have been selected not because they are only to be found in herbariums and botanical collections as may be thought by some, but by reason of the fact that they are common with specialists of ferns in Europe and as such are sold commercially on the market. They comprise the best known to cultivation and certainly are worthy of the attention of those who take a pride in the cultivation of choice plants. An additional merit they possess is their adaptability in a dried state for table decoration, retaining the powder and their color for several years; this can easily be accomplished by drying between sheets of ordinary botanical drying paper, with of course a weight on top. Indeed, with a little manipulation, it is by no means difficult to get them into the form of a living plant, a pot, a potato and a little moss forming the necessary material.

Vernon G. Sherwood.

Brookline, Mass.

Notes from the Arnold Arboretum

None of the *Indigoferas* is perfectly hardy in the neighborhood of Boston, but this does not impair their value for our gardens very much, as they, even if killed to the ground during the winter, freely send forth young shoots from the roots in spring which flower profusely the same year. Somewhat hardier seems to be the new *Indigofera Kirilowii* from Korea but recently introduced into cultivation. It resembles very much *I. decora alba* cultivated at the Arboretum since many years and figured in vol. VII on page 375 of Garden and Forest, but has light purple flowers instead of pure white ones. *Indigofera Kirilowii* is a low bush about one or two feet high with handsome bright green foliage consisting of pinnate leaves with seven to nine roundish leaflets which are rounded at the end and furnished with a bristle-like point, not acute as in the other species. The light purple flowers are three-quarters of an inch long and disposed in racemes three to four inches in length which are borne on long and slender stalks in the axils of the leaves and appear during June and July. It is well worth a place in the borders of shrubberies and could be planted together with the pure white *I. decora alba*.

Some time ago attention was drawn in these notes to one of the native Mock-Oranges as the earliest of all to bloom and today a few words may be said about the latest of them. This is *Philadelphus californicus*—as the name implies, a native of California. It grows into an upright shrub about six feet high or more with bright green rather small foliage and bears at the end of June and beginning of July an abundance of white slightly fragrant flowers. The flowers are comparatively small, about three-quarters of an inch in diameter, but are borne in rather dense panicles, not in simple racemes as in most species. As it has proved quite hardy at the Arboretum, it is to be recommended for its late and profusely appearing flowers.

Another beautiful Mock-Orange which bears the flowers in large panicles and blooms about the same time with *P. californicus* is *Philadelphus insignis* (*P. Souvenir de Billiard* or *Billiardii*). This is probably a hybrid of *P. californicus* with one of the large-flowered species and is a very showy plant with its panicles of large, pure white flowers. As the finest of our native species I may mention here *Philadelphus inodorus* which flowers about two weeks earlier than *P. californicus*. It is very rare in cultivation; the plant usually cultivated under this name is *P. grandiflorus* which also has large flowers but *P. inodorus* is much more graceful in habit with its slender arching branches studded their whole length with pure white cup-shaped flowers about two inches in diameter. Of the new Chinese species one of the most distinct is *Philadelphus sericanthus*, a shrub of spreading habit with distinctly pointed leaves purplish when unfolding; with its horizontal racemes of nodding flowers it resembles somewhat a *Deutzia* of the type of *D. scabra* (*D. crenata*) with large but few flowers. It has proved hardy at the Arboretum, but cannot compare in beauty with many other Mock-Oranges and also apparently none of the other new Chinese species will equal, considered from an ornamental point of view, the best of the varieties now in cultivation.

The Commonwealth Avenue trees

The communication from Professor Sargent which we publish in full in this number presents the facts so clearly and convincingly that we can say nothing which can illumine or in any way add strength to the appeal which he makes therein for a wise settlement of the question of the arrangement of the trees on Boston's famed avenue. The controversy, or—more properly speaking—the attack on the two-row plan adopted by the park commission five years ago, has been going on relentlessly ever since the first of the older misplaced trees fell before the axe but, so far as we know, the plea which Professor Sargent now presents places the matter before the public for the first time from the standpoint which every unbiased horticulturist will recognize as the right one. The paper contains

so much of practical value, not only in this specific instance but in every community where the expert planter finds his well-considered work opposed and hampered by a misguided public clamor, that we bespeak for it a careful earnest reading. More especially should it be perused by the horticultural fraternity in and about Boston and an emphatic protest recorded wherever and whenever it can be made to count against the carrying out of the ill-advised plans recently adopted and the complete obliteration of the work so well begun five years ago.

Special convention transportation rates refused

Secretary Rudd announces that the railroad committees and traffic associations have refused to make any special reduced rate for the trip to the S. A. F. convention at Cincinnati next month. This attitude on the part of the railroad corporations is consistent with the retaliatory and defiant spirit which they have manifested ever since the public undertook through the strong arm of the federal government to circumscribe their growing arrogance and put them under reasonable restraint. The plea which they advance in justification of their refusal to consider reduced excursion rates for this and other conventions is a bit of sophistry unworthy of serious attention. The "old 3 cent a mile system" on which it is asserted the former convention rate of one-and-a-third fare was based may be said to have never existed since the S. A. F. began having conventions. There may have been some unimportant routes on which a three-cent rate was in force but in the great majority of instances where large delegations traveled between important centres the through rates have been much below that figure as anyone who is interested may readily ascertain by going back over the convention rates from various points from year to year as published in the trade journals. That the convention must suffer in attendance this year because of the course of the transportation companies no one will question.

Entitled to a "square deal"

For the past three weeks considerable space in our reading columns has been devoted to the doings of the seedsmen in session at Niagara Falls. We have on hand a number of interesting papers presented at that convention which we shall publish from time to time as space permits and we are sure that they contain much that is worthy of the attention of all of our readers, no matter what department of horticulture they may be engaged in. One would think from the tone of some of the articles published in the daily press of late that the Department of Agriculture and some of the zealous legislators are all that stand between the dear people and a lot of very unscrupulous sharpers—namely, the seedsmen. The fact is that the progress and improvement of the seed trade is synonymous with the progress and improvement of agriculture and horticulture. For two hundred years the commercial seed industry has been a much mightier factor in that respect than any government agency, national or state. Admitting the valuable services claimed for the national agencies—and we believe the seed trade fully appreciates their help and welcomes all the good they do—it remains true that the people at large have been repeatedly fed with innuendo and imputation on the probity of the seed trade in general and some of the magazines and daily papers have shown unseemly eagerness in the dissemination of anything which, by obscuring the merits of the seedsmen, makes for the aggrandizement of ambitious functionaries. A wider publicity for the proceedings in detail at the seed trade conventions would, perhaps, have a salutary counteracting effect.

THE TREES OF COMMONWEALTH AVENUE.

ARAUCARIA EXCELSA SILVER STAR.

To Messrs. Walter Hunnewell, F. G. Webster, and Walter C. Baylies:

Dear Sirs: In compliance with your request I beg to submit the following statement in regard to the trees planted five years ago on Commonwealth avenue, between Dartmouth street and Massachusetts avenue.

The plan of using only two rows of trees on Commonwealth avenue was first suggested, before trees had been planted on the avenue west of Dartmouth street, by Mr. F. L. Olmsted, the distinguished landscape-gardener, to whom the city of Boston is indebted for the comprehensiveness and beauty of its Park System, and by myself. In 1880, at the suggestion of the late Charles H. Dalton, at that time chairman of the Board of Park Commissioners of Boston, Messrs. Olmsted and Sargent prepared a plan for planting Commonwealth avenue. This plan proposed the removal of the four rows of trees then standing between Arlington and Dartmouth streets and the planting in well prepared soil of two rows of trees from one end of the avenue to the other. This plan was approved by Mr. Dalton and other residents on the avenue but was not accepted by the City Government. The artistic and practical principles on which this plan was based are:

First: In order that a dignified vista of tree trunks may be secured each tree should stand opposite a tree in another row, and that the distance between the trees should be practically the same. These are fundamental rules now almost universally adopted in formal planting of this character.

Second: In order that uniformity in size, habit, color, and character of the bark and foliage, and in the time of foliage and defoliation of the trees may be obtained that only one variety should be used.

The committee recommended setting the trees ten feet from the street line rather than in the middle of the planting spaces that they might have as much space as possible in which to extend their branches before the growth of these was arrested by the branches of the trees on the other side of the central walk, and not because it was believed that trees ten feet from the street would, as has been suggested, appear more dignified or beautiful, or better suited to their surroundings than trees standing twenty feet from the curb.

Commonwealth avenue from Dartmouth street to Massachusetts avenue was planted in 1880 or 1881 by order of the Common Council with four rows of trees, the trees in the four rows standing opposite each other, so that the transverse distance between the trees of the inner rows was only about twenty feet, the trees in the rows being about forty feet apart. Between Dartmouth and Exeter streets only American Elms were planted, and between Exeter street and Massachusetts avenue a large variety of European Elms was used.

There are several Elms popularly called English Elms in this country; among these are the Hedgerow or Field Elm, now common in southern England, the Scotch Elm, the Dutch Elm, and the Smooth-leaved Elm, and

The novelty depicted herewith, was the recipient of an award of merit from the Royal Horticultural Society, of England, at a recent exhibition. It was shown by Messrs. Rochford & Sons. It is said that the white tipped

character of the variety remains constant and makes a distinct departure from the typical green form. As the araucaria is a very popular plant, this new variety is likely to meet with an appreciative reception.

of each of these, with the exception of the first, there are many seminal varieties and probable hybrids. These species and varieties are very different in habit, rate of growth, hardiness, and time of foliage, and many of them are unsuited for street-planting in this part of the country owing to their irregular habit and want of hardiness; and of the so-called English Elms only the Field Elm in the peculiar form common in southern England has proved to be a good street tree in Massachusetts. It is this tree which was largely planted in eastern Massachusetts toward the end of the eighteenth century through the agency of Major Paddock, who established a nursery of this Elm in Milton; and it is this tree which has grown to a larger size in Boston than any other planted tree. This particular variety of Elm does not produce seeds, and as it can only be propagated by suckers or by grafting, it is necessary to use grafted trees as Messrs. Olmsted and Sargent recommended in their report of 1880.

Before the trees between Dartmouth street and Massachusetts avenue had been planted for twenty years it became evident that this plantation could not be kept much longer in good condition. Between Dartmouth and

Exeter streets the American Elms of the inner rows, standing only twenty feet apart, were already dangerously crowded and were being destroyed by the more vigorous trees of the outer rows. Several of the foreign Elms west of Exeter street had already died; others were unhealthy, and the unsatisfactory results of the mixing together in formal street-planting of different kinds of trees were becoming more and more evident every year.

Two courses seemed open to the Park Commission—to let things remain as they were and allow the trees, badly selected, planted too close together in insufficient soil, with little chance of surviving for another twenty-five years, to die; or gradually to remove enough trees to make room for a new plantation made with one sort of tree and in a manner to insure for these trees the longest possible life.

If the Commission had adopted the first plan the appearance of the avenue would have become less satisfactory as the trees gradually disappeared, and in a comparatively short time it would have been necessary to take down all the remaining trees, leaving the avenue without any shade until new trees had grown. By adopting the second plan it was possible to

replant the avenue in a manner to secure healthy and long-lived trees, and at the same time to preserve for several years enough of the older trees to give the appearance of a planted avenue until the younger trees had attained sufficient size to produce this effect. For this reason I recommended the commission to change gradually from the four-row plan into a two-row plan.

From the plan prepared in 1880 by Messrs. Olmsted and Sargent the plan recommended by me to the commission seven years ago differs only in one particular. Instead of setting the trees ten feet from the street, as recommended in 1880, the trees were planted in the middle of the loam space, because it was possible in this way to preserve for some years a larger number of the trees in the outer rows than it would have been possible to save had the new trees been planted nearer the roadways.

There is no question that four rows of trees in Commonwealth avenue would produce a better effect than the two rows, and that by the four-row plan the central walk and the two roadways would be more quickly shaded than by the trees in two rows. It is probable, moreover, that eight rows of trees would produce a better effect than four rows, but, unfortunately, certain conditions are fixed in the avenue. The planting space in Commonwealth avenue is one hundred feet wide. The growth of the English Field Elm in this neighborhood shows that in a space one hundred feet wide it is not possible to keep in good condition more than two rows of these trees for a period long enough to enable them to reach a height and size commensurate with the width and dignity of the avenue, and that the trees even in two rows must become cramped and injured by the trees opposite them long before they can attain half their size.

Some idea of the probable growth of the young trees now planted on the avenue can be formed by an examination of the row of Elm trees planted in 1876 by the Water Department of the city on Beacon street near the Pumping Station of the Chestnut Hill Reservoir. These are grafted trees of the same variety and character as those planted in 1904 on Commonwealth avenue. They have received no especial care. The ground on which they stand has not been cultivated for many years and has not been enriched, and the trees have not been pruned for a long time. These trees cannot be considered to have made an unusual or remarkable growth; and they have not reached more than a quarter of their full size. Many of these trees now have a spread of branches of 48 feet, and the smallest spread of branches of any of them does not appear to be less than 45 feet. If the trees on Commonwealth avenue grow no better than these reservoir trees, they should, in 1934, extend their branches three feet over the central walk and over the roadways; and nine or ten years later the branches of the trees in the two rows should interlock over the central walk. At this time the trees would not be over one-third of their full size. Trees of this variety of Elm from fifty to sixty years old in the neighborhood of the city

have a spread of branches varying from 50 to 70 feet.

The criticism that the two rows of trees west of Dartmouth street will not harmonize with the four-row plan east of Dartmouth street does not need discussion, for the four rows can hardly be said to exist. Many of the trees planted in the four rows have died; others had become so unhealthy and deformed that their removal has been necessary. Of the one hundred and eighty-two trees originally planted in 1860-62 between Arlington and Dartmouth streets only eighty-five are now standing. Ninety-seven of these trees have gone, besides a number of other trees planted from time to time on this part of the avenue to replace dead trees. Of the number of such replanted trees there is unfortunately no record.

The condition and appearance of the trees in these plantations seems to offer sufficient arguments against an attempt to grow to maturity four rows of trees of the first size in a city planting space only 100 feet wide and the use of more than one kind of tree in one city street, as is now proposed by the Park Commission. Their plan has in my opinion these objections:

First: The trees alternate in the rows instead of standing opposite.

Second: Each tree will stand only 40 feet from its neighbor except at the end of the blocks where the space between two of the trees will be 20 feet. The plan, therefore, does not provide symmetry or sufficient space to permit the trees to grow for more than a few years.

Third: The trees in the outer rows, having the benefit of the light and space from the adjoining roadways, will grow more rapidly than the trees in the inner rows which will become crowded and deformed, and at the end of a few years the symmetry of the plantation will further be injured by the inevitably unequal size of the trees.

Fourth: The plan is impracticable and cannot be successfully executed, for it calls for the planting together of larger and smaller trees, a system which is never successful, as has been shown in Commonwealth avenue between Arlington and Dartmouth streets where from time to time unsuccessful efforts have been made to plant small trees to fill the vacancies caused by the death of older trees. A still better example of the results which follow the mixing of large and small trees together in street-planting is found in Berlin where in Unter Den Linden young trees have been planted to take the place of older trees as these have given out. This plan has proved so unsatisfactory that an entirely new planting has now been made. The planting space is about the same width as in Commonwealth avenue; and two rows of trees have now been used to replace the four rows of the original plantation.

Fifth: The plan provides for the use of several distinct varieties of trees different in habit, rate of growth, and hardiness. The use of more than one kind of tree in one city street has been given up in all modern systems of street-planting, because different kinds of trees mixed together do not produce the formal and symmetrical effect which is needed in street-planting, and

which can be produced only by the use of trees of one variety. The want of symmetry resulting from the use of several kinds of trees in one street is well illustrated in Commonwealth avenue between Arlington and Dartmouth streets, which may be compared with the Beacon and Charles street malls of the Common where the good effect produced by using continuously one kind of tree is well shown.

Sixth: The adoption of the plan as it calls for the moving of all the trees planted in the spring of 1904 means unnecessary delay in supplying the avenue with shade. These trees have grown rapidly and they already have long and large roots. Their removal from their present positions will retard their growth for several years. Some of them will probably die from the operation, and it may be expected that they will never become as good trees as they would have if they had not been moved.

Seventh: The adoption of this plan involves an unnecessary expenditure of money. In 1903-4, upon the recommendation of the Park Commission, the city spent \$10,000 in planting the two rows of trees on Commonwealth avenue between Dartmouth street and Massachusetts avenue. The Commission now recommends a further expenditure of about \$24,000 to undo its work of six years ago. This is something more than the waste of public money, for it destroys a good plan in the attempt to adopt another plan which it is impossible, under existing conditions, to carry out.

Yours very truly,

C. S. SARGENT.

AN IMPOSING EXHIBIT OF WHITE ORCHIDS.

It is a rich and rare picture which we present as a cover illustration in this issue. We learn from Mr. Armstrong, the exhibitor, that the group contained in all about one thousand plants. The extent of the group was 9x72 feet, making it probably the largest orchid group ever staged in England and a gold medal was its reward. It contained two hundred plants of *Dendrobium nobile* Virginalis, five hundred other dendrobiums in variety, besides numerous varieties of odontoglossums, cymbidiums, laeliocattleyas, cypripediums, lycastes, masdevallias, sophronitis, etc. Nobody can blame the florist if he looks with envious eyes on that bewildering array of pure white dendrobiums which forms the foreground of the picture. What possibilities in chaste decorative work they suggest! We hope to see something equally rich on this side of the Atlantic some day in the near future.

PROPAGATING ARAUCARIAS.

HORTICULTURE:

Will you kindly let me know what method is employed in Belgium for propagating *Araucaria excelsa*? They root from cuttings, but do not make satisfactory plants. L. M.

Rooting from top cuttings is the method almost exclusively employed in Belgium in the propagation of *Araucarias*. Propagation by seed is not practiced.

NEWS OF THE CLUBS AND SOCIETIES

NEWPORT HORTICULTURAL SOCIETY.

This society held its June exhibition on the 28th and 29th of June. Nearly every class was well filled, but the chief struggle was for the prizes offered by Mrs. Robert Goelet for a table of flowering plants and a vase of cut flowers with arrangement in each class to count 50 per cent, and both were won by Mrs. Ogden Goelet, gardener James J. Sullivan, with a very pretty arrangement of anthuriums and gloxinia plants for the table and cut anthuriums with their own foliage for the vase. Mr. Sullivan was also first

tastefully arranged showed good quality of flowers more than good arrangement and Mrs. T. J. Emery, gardener Andrew Dorward, was first; Dorward was also a winner in many of the other classes. In the class for hardy herbaceous flowers two splendid collections were staged, the first by H. D. Anchinloss, gardener John Mahan; this collection had about 230 varieties.

Strawberries were in small quantity but quality was good, and Mrs. W. B. Greene, gardener Samuel Speers, was the main winner. Grapes and nectarines were also good but few. The School Children's class for wild flowers was well filled, seven very credi-

a certificate of merit; this is a beautiful variety and will surely be a leader when better known. Certificates of merit were also awarded to the following: Mrs. T. K. Gibbs, gardener James Hooper, *Eucalyptus ficifolia*, in flower; Henry A. Dreer, for *Nephrolepis Scholzei*; Mrs. H. M. Brooks, gardener James Bond, for *Angiopteris erecta*; W. W. Rawson Co., for fifty varieties of sweet peas, mostly new; Andrew Pow, for vase of *Chrysanthemum Monrovia*; W. J. Matson, for sweet peas.

The judges, who gave good satisfaction, were Richard Gardner, Andrew S. Meikle and Albert Fraser.

The attendance of visitors was not as good as the merits of the exhibition deserved J. R.

FIRST PRIZE GROUP FOLIAGE AND FLOWERING PLANTS

At Newport Horticultural Society, by Colin Robertson.

in the class for specimen fern with a very large and handsome *Davallia filixensis*, and in several of the classes for roses; also for specimen palm in 12-inch pot with a *Phoenix Roebelenii*. In group of palms, ferns and flowering plants, 100 square feet, Mrs. Robert Goelet, gardener Colin Robertson, was first; the arecas in this group were particularly good. Robertson was also first for specimen kentia in 12-inch pot; specimen palm, any size or variety, and for 12 roses, 12 varieties. R. L. Beekman, gardener John Urquhart, first for specimen areca. The same exhibitor also showed H. T. roses in excellent form.

In the class for decorative foliage plants each plant to be serviceable for a table, I. T. Burden, gardener Charles Newton, was first; J. J. Wyson, gardener James G. Kyle, a close second. Newton was also first for fancy basket of roses. For collection of outdoor-grown roses by Newport county gardeners, Miss Fanny Foster, gardener Muller Bugholdt, was first with an extra good collection. This exhibitor also figured prominently throughout the list. The class for display of roses

table collections being shown and the first having eighty varieties.

Special Awards.

Among the exhibits of extra merit which received special awards were the following: A table of cattleyas and ferns, tastefully arranged by Oscar Schultz; a table of specimen greenhouse plants and cut roses by Mrs. T. G. Richardson, gardener James Robertson; a grape vine well fruited in tub by Mrs. T. J. Emery; a table of delphiniums and sweet williams by Mrs. Winthrop Chanler, gardener W. G. Postings; also a table of Dreer's All Heart lettuce and Sutton's Mammoth Paris Cos. A bronze medal was awarded to Mrs. Charles Potter for a miniature Japanese garden, made by herself.

Julius Roehrs Co. staged a few orchids on the second day which were very much admired. Among the newer ones were: *Odontoglossum crispum* Hautnotes, and *Cypripedium callosum* Sanderæ, which were each awarded a first-class certificate of merit. The same firm also showed the new Croton, Fred Sander, which was also awarded

SOCIETY OF AMERICAN FLORISTS.

Transportation to the Cincinnati Convention.

It seems to be settled that no special rates will be granted for the Convention, the traffic associations pointing out that the regular rates now quite generally charged, namely, 2c. per mile or 4c. for the round trip, are precisely the same as the special rate of a fare and a third which the society used to have under the old 3c. a mile system, and they claim that nothing beyond this can be allowed. The fact is pointed out, however, that tourist rates are in effect from a great many points in the country to all the larger cities, and that by a little inquiry most of the members of the society can obtain a very low rate to some large city like St. Louis, Chicago or Buffalo, and from there join the local club and get advantage of any special arrangements which they are able to make.

This being the twenty-fifth meeting of the society; Cincinnati being such a central point; such great exertions being made by the Cincinnati people to make the reception and entertainment something out of the ordinary, all seem to insure a large attendance at the convention. Reports from all points indicate great interest in the Convention and that an unusually large number have signified their intention of attending.

Superintendent Murphy reports an extraordinary demand for space, both in the number of applicants and in the large spaces required, which seems to insure a phenomenally good exhibition. The hall set aside for the trade exhibition is perhaps the best which the society has ever had and the meeting hall, both in size, comfort, and convenience, and also in its easy access to the trade exhibition, seems to be nearly ideal. In the meeting hall is a magnificent pipe organ, and Vice-President Gillett has secured the services of one of the leading organists in Cincinnati for organ concerts previous to the opening of each session.

The preliminary program for the convention will be issued shortly and mailed to all members. Copies will be cheerfully sent to all others on application.

W. N. RUTD
Secretary.

July 2, 1909.

MINNESOTA HORTICULTURAL SOCIETY.

The twentieth summer meeting of the Minnesota Horticultural Society was held at Agricultural College, St. Anthony Park, June 29. About 400 people sat down to a sumptuous dinner. The show of peonies was very fine. The climate of Minnesota seems to agree with these radiant flowers. We note the increasing interest in them. Four years ago there were a few vases, and now long benches are loaded with them. There is a growing interest in other perennials with a fair show of irises, delphiniums and others.

One of the chief attractions was an exhibit of 100 plates of seedling strawberries. These were crosses from the wild berries of Alaska, Northern Norway and other cold regions and our hardest improved varieties. Many of these were of good size and fine flavor. The great trouble seems to be to secure firmness for shipping, for all the wild varieties seem to be soft. These berries were selected from 3000 plants. They will invariably be cut down to a dozen, and these will be subjected to the severest test of going through the terrible Minnesota winters without mulching. Those which cannot endure it will be discarded.

There is another batch of 20,000 coming on, which shows the vast scale on which these experiments are made, and surely among all these thousands, some will be evolved which will be of great benefit for the bleak North West. Other strawberries on exhibition were fine in flavor and in size—fully equal to any I ever saw at the Boston shows.

The afternoon was given to a running fire of short speeches wanted to be not over five minutes long; the writer being called on gave "The Lure of the Peony." There is always the greatest harmony in this society under the leadership of Secretary Latham and Prof. S. B. Green. The society now numbers about 3,000; probably the largest on earth. The members have zest and enthusiasm enough to set on fire half a dozen other societies. There is the joy and triumph of victory. They have succeeded after thousands of defeats till now, Minnesota is one of the best of our Western fruit states.

C. S. HARRISON.

York, Nebr.

HORTICULTURAL SOCIETY OF NEW YORK.

The preliminary schedule of classes for the fall exhibition, to be held Nov. 3-7, 1909, has been received from Secretary George V. Nash. The show will be held in the American Museum of Natural History, Central Park West and 77th street, and the success which attended the fall show last year led to the belief that the exhibition of 1909 will be even more of a public attraction than that was. Mr. Nash, whose address is N. Y. Botanical Garden, will be glad to send copies of the schedule to all who apply. There are 100 classes provided for in the regular list of prizes.

FLORISTS' CLUB OF PHILADELPHIA.

Convention matters and a talk on "Lawn Decoration," by Edwin Lonsdale, were the principal items on the program at this club's regular monthly meeting held on the 6th inst. Committees were appointed on transportation and hotels. John Westcott is chairman of the transportation committee. So far as can be learned at this writing, the Chesapeake & Ohio route is the one favored. The fare that way is \$13.37. The committee will endeavor to arrange a joint party to include Philadelphia, Baltimore and Washington. The usual appropriation for the bowling team was not made this year, it being the general opinion that a good team could be got up for this inexpensive point without costing the club anything. We hope to be able to make room for a synopsis of Mr. Lonsdale's address on "Lawn Decoration" at an early date.

FLORISTS' CLUB OF WASHINGTON.

The regular monthly meeting of the Florists' Club of Washington was held at Gude's Hall on July 6 at 8 o'clock p. m. Invitations had been issued for an "al fresco" meeting at Kramer's greenhouses, but owing to the weather conditions it had to be transferred to the regular quarters. There was an unusually large attendance, as it was known that there was business of importance to be transacted.

The fall flower show was discussed at much length and the following committee was appointed: Geo. Cooke, Wm. F. and Adolph Gude, Geo. Shaffer, Edw. S. Schmid and E. C. Mayberry, with power to appoint sub-committees. It was voted that the regular outing of the club this summer be in the form of a basket picnic. Neither time nor place was definitely decided upon. Wm. F. Gude, Geo. Shaffer, E. C. Mayberry and Ed. S. Schmid were appointed a committee to make all arrangements. Some speakers very strongly urged the advisability of the members attending the convention in Cincinnati in August.

After the business meeting all were invited to repair to the back of the store, which was decorated in flags and palms, where lunch was served by President Kramer and a social hour followed, enlivened by minstrels and other entertainment.

CHICAGO FLORISTS' CLUB.

The Chicago Florists' Club at their regular monthly meeting elected Frank Johnson, of the A. L. Randall Co., secretary. Fred Benthely, Leonard Kill and H. N. Bruns were elected trustees. The convention committee reported that a car had been chartered over the Monon route, but the exact time of starting had not yet been made known.

President Valentine and other florists from Denver, St. Paul and Minneapolis, Milwaukee, Omaha and other cities will join the Chicago party here. Contrary to the usual custom, a meeting will be held on the first Thursday in August to complete business for the convention.

NATIONAL SWEET PEA SOCIETY.

The initial meeting and exhibition of this new-born organization was held at the Museum of Natural History, New York City, on July 7 and 8.

The Exhibition.

The exhibition was a grand one, quantity, quality and arrangement being as near perfect as possible. There were nearly 2,000 vases and over 100 varieties were shown, some exhibits having as many as 75, all named. Peter Henderson & Co. staged over 100 varieties, not for competition. Entries in the competitive classes included the names of W. W. Rawson & Co., Howard Gould, Wm. Duckham, Seth Low, A. T. Boddington, Ormston, Hedden and De La Mare. List of awards had not reached us at time of going to press. Lager & Hurrell, Julius Roehrs Co., and Jos. A. Manda contributed fine tables of orchids. Harry Turner showed specimen *Acalypha Sanderiana*, John Lewis Childs showed lilies and irises and The Rosary Company arranged a handsome table decoration.

The Meeting.

Prof. John Craig of Ithaca served as temporary chairman. Officers were elected as follows: President, Harry Turner; vice-president, W. H. Waite; secretary, Harry A. Bunyard; treasurer, Wm. Duckham; executive committee—for three years, W. Atlee Burpee; for two years, A. C. Zvolanek; for one year, William Sim.

Prof. Craig read a paper on "The Purposes of Trial Grounds." A well attended banquet was enjoyed at the Hotel Kennelly on Wednesday evening.

Thursday's proceedings will be given in our next issue, also list of awards.

FLORISTS' HAIL ASSOCIATION OF AMERICA.

The list of losses adjusted and paid by this Association from June 1 to July 4, 1909, includes 49 establishments, located as follows: Ky., Mich., Minn., Neb. and Tex., one each; Ind., Ia., Okla., and S. D., two each; Mo. and Ohio, three each; Kans., five; Ill., six; Colo., nineteen. The total amount was \$10,993.46, of which two-thirds was in Colorado, mainly in Pueblo. The second largest individual loss was in Kalamazoo, Mich., \$1,629.66.

CLUB AND SOCIETY NOTES.

We are notified by Secretary Rudd that, pursuant to a request of Secretary pro tem. Bunyard of the proposed National Sweet Pea Society, President Valentine appointed F. H. Traendly of New York City to represent the S. A. F. & O. H. at the meeting held this week in New York.

The seventy-eighth annual fair of the American Institute will take place at the Berkeley Lyceum Building, 19 and 21 West 24th street, New York City, on September 21st to 23. The list of premiums to be awarded for plants, flowers, fruits, vegetables and farm crops has been issued in neat pamphlet form and copies may be had on application to W. A. Eagleson, secretary of the Board of Managers at above address.

ROYAL HORTICULTURAL SOCIETY, LONDON.

The Novelties at the Exhibition on June 22.

R. H. Bath, Wisbeck, was one of the largest exhibitors of peonies, and the choicer of the varieties he showed were the following: Triumphans Gandavensis, a flower about 9 inches in diameter, and the anthers quite hidden by the close doubling of the petals, which are of a blush tint; Charlotte d'Arenberg, a very large purplish crimson flower; Moria Bouchardet, 8 inches in diameter, of a light rosy crimson color, and very full; Lemoulier, 9 inches in diameter, full, pink with a purple suffusion; Fiancee, a beautiful double white flower; Nymph, having white guard petals, and central mass of lemon-colored ones.

Frank Cant & Co. showed several roses not as yet common in our gardens, viz.: Mme. Melanie Soupert, a whitish fawn-colored Tea, of the Niphetos form before the petals unfold; General Galliene, a Tea, deep rose-pink, and white at the base of the petals; Queen Mab, apricot color, shaded orange and pink, a pretty flower belonging to the Chinese section; Irene Watts, white, tinted salmon red, another beautiful variety of the same section; and Anna Chartron, Tea, blush tinted, with a pointed bud, an exquisite coat flower.

Paul & Son were exhibitors of the rich purplish red-flowered Purple East, a strong growing rambler, which bears very large bunches of blooms. The variety belongs to the Polyantha section and was raised by the exhibitors. Simone Beaumez, a Hybrid Tea, is a fine, large blush-colored variety, a really good thing.

J. Veitch & Sons showed Rosa Moyslii, a very distinct species from China. The blooms are single, 3 inches in diameter, blood red in color, and borne on short spurs, and are of great substance. The plant will grow, under favorable conditions, to a height of 6 feet.

The last-named firm were the exhibitors of Linaria "The Pearl," an annual growing in pots to a height of 1-2 ft. The plant produces numerous slender stems topped with spikes of pure white flowers, 3 inches long, the individual blooms being about 1-2 in. long, and the hood is tipped with bright yellow—a pretty decorative plant for the greenhouse, window box, or for planting in beds for early flowering. It has linear leaves. Alonzoa Warscewiczii compacta is a plant of a slender habit of growth of about 1-2 ft. in height, the stems surmounted with short inflorescences, consisting of flowers 1-2 in. in diameter, and of a bright scarlet color. Nemesis Blue Gem is a pretty, dense-flowering annual.

Some new Heucheras, viz., Pluie de Feu, scarlet, and H. purpurea marmorata, crimson-brown, were shown by G. Bunyard & Co. As showing what may be done with the hybrid Cape Pelargonium Clorinda, some standard trained plants were shown by Ed. Becket. The plants had a height of 5 to 6 feet, and were furnished with fine trusses consisting of 6 to 8 flowers of rosy-pink color.

Several new sweet peas were shown, those from Mr. W. J. Unwin, viz., Histon Favorite, orange-scarlet and of

large size; Nancy Perkins, of another tint of orange-scarlet and Pink Pearl light pink, being acquisitions of much merit.

H. Burnett came out strongly in perpetual flowering carnations. He showed the novelties Fortuna, a yellow self, with fringed margin, and Snowball, a large and beautiful white variety, with petals that are nearly smooth. It is not a true tree carnation, being a cross between a border and a tree variety. Mr. Burnett showed the new variety, Rose Doree, cherry-red with orange tinge. The flower is very full, and the calyx is perfect. The variety was raised by Mr. Lancashire, Guernsey.

The following new Cannas were shown by J. Veitch & Sons: Geheim-Rath Borsig—a big truss and flowers—the color old rose; C. Rosea Gigantea, a dull rose-red variety; Duke Ernest, glowing crimson—a large truss and bloom; and R. Wallace, having flowers of a rich yellow color and great size.

A JUBILEE FLOWER SHOW FOR HAARLEM.

The following paragraph from a recent letter received from Polman-Mooij may be of interest to the readers of HORTICULTURE:

"In April, 1910, there will be a jubilee flower show in Haarlem, Holland, which is to be held only half a mile beyond our city nurseries and on the same road. We expect to have a most interesting exhibit of over 100,000 hybrid seedlings of hyacinths, tulips and narcissus, all raised in this same oldest nursery in Haarlem, now entirely built in and on the same spot where the great tulip speculation and financial disaster was experienced in February, 1637. A large collection of the same tulips as handled in the years 1633-1636 will also be on exhibition in this original tulip nursery where our firm was established just one hundred years ago in 1810. These are also the same tulips on which a lecture was held two years ago in New York by Mr. Peter Barr of London. As the flowering season of these bulbs will last from the first week in April until the end of May of 1910, a visit to these nurseries will no doubt prove interesting at any time of the spring."

Detroit.—Andrew Ferguson is very slowly recovering from a very serious illness which has continued ever since last fall—Chas. Warnke is going to California and the Yukon Exposition with the local lodge of Elks.

LILIES
PLANTS
BAMBOO STAKES

THE SPENCER TYPE OF SWEET PEAS.

Messrs. Burpee put up a fine show of these at Horticultural Hall, Philadelphia, on the 29th ulto. This is the first time the general public has had a chance to see the latest improvements in sweet peas, as it is not everybody who can afford to spend a day at Fordhook, where acres and acres of sweet peas are now in full bloom in the testing grounds. Anyone who can go, should go early in July as the fields are then at their best. Among the most conspicuous noted at the show mentioned above were:

Queen Victoria Spencer; large flowers of good substance; primrose, flushed with rose.

Mrs. Routzahn Spencer; rose and blush on a primrose ground, edged with darker rose.

Helen Pierce; white marbled with blue. Mr. Kerr informed us that this variety had not reached its best brilliancy as to coloring so far, on account of the warm weather.

Primrose Spencer; a creamy yellow flower of large size and excellent substance. This undoubtedly surpasses the well-known older variety, Hon. Mrs. E. Kenyon.

White Spencer; a pure white flower of enormous size and fine substance. Good long stems.

Aurora Spencer; creamy white flaked and mottled with salmon; one of the best of its class—the waving and fluting of the wings and standard being very pronounced.

Princess Victoria; one of Dobbie & Co.'s introductions and resembles the old Countess Spencer, but is a lighter pink in color and better as to size and substance.

Florence Morse Spencer; blush edged with pink; fine as to size, form and stem; mostly three to four flowers to a stalk.

Mr. Kerr informs us that there are over seven hundred separate and distinct tests of sweet peas planted out this season on the trial grounds at Fordhook. This fact gives an indication of the care and thoroughness with which the Burpee firm investigates the merit of every promising variety in whatever part of the world it may chance to originate, and explains in a way why the name of this house has become so associated with the sweet pea. Away at the back end of nowhere the fame of Philadelphia is ever green—either with Stetson hats or Burpee's seeds. At least so we're told by that travel-obtained hardy-perennial—the notion drummer.

G. C. WATSON.

At the request of the Secretary of Agriculture instructions have been given to officers of customs by the Treasury Department that until July 1, 1910, 2-ounce samples of all imports of 100 pounds or more of grass, clover, and forage-plant seeds be prepared at the earliest practicable date after entry, and forwarded to the Seed Laboratory, Department of Agriculture, Washington, D. C., labeled with names and addresses of consignors and consignees, name of seed as given in the invoice, and quantity of the consignment.

WHOLESALE GRASS SEED DEALERS' ASSOCIATION.

In interims between sessions of the American Seed Trade Association Convention held at Niagara Falls, Ont., last month an organization was launched in the seed trade and named the Wholesale Grass Seed Dealers' Association. The following were elected as its Board of Directors, viz: Charles D. Boyles, of The Albert Dickinson Co., Chicago, Ill.; Henry W. Wood, of T. W. Wood & Sons, Richmond, Va.; M. H. Duryea, of Henry Nungesser & Co., New York City; Robert Pommer, of D. I. Bushnell & Co., St. Louis, Mo.; Charles Dickinson, of The Albert Dickinson Co., Chicago, Ill.; C. F. Wood, of Wood, Stubbs & Co., Louisville, Ky.; Jos L. Peppard, of J. G. Peppard Seed Co., Kansas City, Mo., and Albert McCullough, of J. M. McCullough Sons Co., Cincinnati, Ohio.

The board organized by electing Albert McCullough president, C. F. Wood secretary-treasurer and M. H. Duryea vice-president.

CATALOGUES RECEIVED.

Knight & Struck, New York. Price list of named hybrid orchids.

The George Wittbold Company, Chicago, Ill.—Catalogue of Decorative Plants. A useful and instructive publication for the use of retail buyers.

A. T. Boddington, New York, Midsummer Garden Guide—Hardy perennials and old-fashioned flowers have their innings in this very useful list for the practical planter. The cover is devoted to a strawberry which is the principal feature in a formal decorative design in colors by H. A. Bunyard, forming a seasonable and appropriate cover illustration.

PUBLICATION RECEIVED.

House Plants and How to Grow Them; by Parker T. Barnes.—This book, just issued by Doubleday, Page & Company, New York, is the ninth in the series of The Garden Library. It is not written for the florist or gardener, but for the public—the florists' customers—and no florist can do more effective work in his own behalf for the future than to encourage the growing of plants in the home by doing all he can to promote the dissemination of a sensible and practical book on their culture such as this is. Mr. Barnes has the faculty of telling cultural facts in a concise, convincing and most readable way and he thoroughly understands his subject—which is not always true of those who undertake to instruct the public in plant culture. The varieties of plants which Mr. Barnes has selected as the best subjects for home cultivation are well

chosen and none are included which can be called impossible or even doubtful under intelligent care. We would suggest that in another edition he might add the gloxinia to the list of easily grown window subjects. Any florist who seeks to build up closer relations with the flower-loving people of his neighborhood, should recommend this book. It contains 236 pages, is illustrated with many full page engravings and the price is \$1.20, post paid.

WASHINGTON'S FLORAL AUTO PARADE.

FIRST PRIZE WINNER IN WASHINGTON AUTO PARADE

By Gude Bros.

On July 5th Washingtonians enjoyed one of the most beautiful, as well as one of the most unique, processions ever viewed by any city, viz., a floral-auto parade.

The first grand prize was awarded the "Swan boat" (an idea borrowed from "Lohengrin"), as the most beautiful car in the parade. The prize consisted of a \$300 loving cup, engraved with picture of the winning car, and was awarded to William F. Matteson. The car was decorated by Z. D. Blackistone.

For the most beautiful car driven by a woman there was a prize of a \$200 diamond ring. This car was also decorated by Blackistone and was a huge basket decorated with pink rambler roses and green.

Gude Bros. received first prize in class "A" of a \$100 loving cup for the

most beautiful canopied steam car, surmounted by a huge basket of pink flowers.

Second prize was awarded Clayton Graff for a wistaria arbor auto, which was also decorated by Blackistone.

A prize of \$5.00 in gold was awarded a car decorated by W. Marche. It was a miniature automobile decorated in Uba leaves and pink rambler roses.

In class "B," the first prize of silver cup, valued at \$100, was taken by Mrs. Moore. The car was in shape of a huge pink sea shell and it was a close second for the grand sweepstake prize. Car was decorated by Blackistone.

In class "C," first prize of \$100 silver cup was awarded to Gude Bros. for delivery wagon decorated in white and green effect in cloth and roses.

Second prize was awarded the Terminal Taxicab Co., for car decorated in immense palms and grasses and drawn by winged doves. It was decorated by W. Marche.

Out of four machines decorated by Gude Bros., three received first prizes.

Seldom has anything in Washington been more thoroughly enjoyed.

INCORPORATED.

Brooklyn, N. Y.—The Howell Carnation Company to deal in flowers, etc.; capital stock, \$10,000; directors, Frank A. Howell of Jamaica, Alexander D. Donnelly and Mary A. Verney of Brooklyn.

Memphis, Tenn.—Buseck Floral Co., J. W. Proudft, W. E. Gage, W. M. Ball, L. Goldsmith, L. N. Starke, W. B. McLean, W. E. Pipkin, and Otto Buseck; to operate greenhouses and deal in plants and flowers; capital, \$25,000.

Flower Market Reports.

BOSTON

The market situation remains about as it was last week. Summer resort business has not yet come to life and local demand is very quiet. Quality of material is not up to mark except in the case of Kaiserin roses and sweet peas. The latter are very fine, but there are many more than the market can use and prices are very low, while a great proportion are left unsold. Carnations have never been worse than at present.

BUFFALO

The first part of the past week there was little or no business, but the quantity of stock, especially carnations, came in heavy supply with no outlet. Quality was rather good for the season of the year and prices ridiculously low, and the larger portion not sold at any price. Beauties also have been on the "carried along list" and no demand whatever. Bridesmaids and Bride are small, while Kaiserin, Carnot, Reid and Detroit are fine and at times not enough can be had. Killarney is holding out well but comes in tight buds no larger than Bonsilene. Peonies are over and candidum lilies are on, while sweet peas have been a glut for a week past. Good heavy rains are in demand by the growers and would no doubt help the market somewhat should the atmosphere cool down and give the stock a chance to arrive in better condition.

CHICAGO

Nothing very encouraging can be said of the cut flower market in Chicago at this time. The season is closed and plenty of time is at the disposal of the florist to look over their last year's sales and make plans for the year to come. Many are ready to admit that the volume of business this season has been far ahead of that done last year. The glut of flowers still continues, though it must be understood that it is a glut of poor stock. Really good stuff is decidedly scarce. Roses are on short stems and small. Good carnations are practically out of the question. Some very fair Beauties are seen, but not in abundance. Out-door sweet peas are backward on account of the weather.

Commencements and the extensive call for wedding flowers having passed, summer dulness is being felt

all around. One or the other may be rushed occasionally, but this has little influence on the enormous quantities of stock which are now daily dumped into this market. While prices are being quoted they are not firm at all, and any call in quantity creates different prices. The better quality of roses are the only exception. Outdoor flowers like larkspur, etc., furnish an agreeable change in filling baskets, etc., as also a great assistance in window trimming.

PHILADELPHIA

June 28 to July 3. Early in the week there was quite a little spurt in the Beauty market, but conditions became more normal later as the new crop flowers became gradually more plentiful. The features of the week were the High and Normal school commencements, and the Durham funeral. For the latter 134 pieces were sent by 22 of the leading retail houses. Such an avalanche of flowers it was quite out of the question to send to the cemetery. Most of them went to the hospitals. This was an object lesson in how to overdo things, which in the long run is bad for the business. White roses were at a premium in consequence. Kaiserins were good but as a rule white roses are off crop and

poor. My Maryland is coming in more freely, and as a rule the quality is all that can be desired. Killarney has fallen off more than ever and we are still getting the best stock from the East. Liberty is only fair and Richmond, dismally undesirable. Carnations are steadily running down. Even the vanguard of the outdoor crop is under grade as yet, on account of the protracted hot spell. Crocker is the principal variety so far. Lily of the valley has been quite scarce—like good white roses, and mainly for the same reason. The demand for cattleyas fell off, and these have dropped a notch in quoted figures. Greenhouse-grown gladioli are nearly over, and out-door flowers from now on will hold the stage. The latter are selling fairly well so far. Sweet peas went down hill very badly on account of the weather. Water lilies and Japanese irises are more plentiful and are in good demand for artistic and seasonable effects in room and table decorations. Lilies are particularly good and the demand steady and healthy. On the whole it has been a good week, notwithstanding the enormous amount of inferior stock arriving and for which there was no sale.

FLOWER MARKET REPORTS.

(Continued from page 51)

Trade is very quiet.
NEW YORK This is a sort of chestnut but we are expected to pass it out once a week, all the same. There are plenty of carnations on all sides, such as they are, but it is gratifying to be able to report that the quantity of roses coming in daily is rapidly diminishing. As to quality the less said about the most of them the better. All other regular stock is in normal supply. As to prices—catch-as-catch can.

PHILADELPHIA NOTES.

S. S. Pennock and family are summing at Ocean City, N. J.
Harry May and family held the fort at Waretown over the Fourth.
During July and August Michell's seed stores will close daily at 5 p. m., Saturdays 1 p. m.
Ed. Upton, late of Lilly & Upton, dissolved, is taking a rest in the mean-

time. His future movements will depend on circumstances.

Frank Polites has been having an enjoyable time in Pittsburg, Youngstown, Cleveland, and other points during the past two weeks.

Wm. K. Harris has been confined to his room for over a week. General debility, probably caused by the hot weather. He expects to be about again in a few days.

J. Wm. Coldish is an ardent patriot but his enthusiasm has limits. He objects to having his place burned down even if it is the glorious Fourth. Hence the hurry call for the fire brigade to save his wagon shed.

G. S. Faulkner, florist, 138 South 15th street, is temporarily located on opposite side of street (137) during rebuilding. About Sept. 1st he will occupy his old location—excepting that capacity will be doubled and he will have the corner store of the new building.

W. F. Gude, Washington, D. C., was a week-end visitor and made it all up with the Commodore for not being at Waretown on the 25th ult. He also

gave some good advice anent the routes to the convention which will prove of value to our local delegation.

W. Atlee Burpee sails for Europe on Saturday, the 10th inst., to attend the sweet pea exhibitions and visit the interesting horticultural centers. His firm will disseminate four new Spencers this year. These are said to be a distinct advance on anything yet introduced. We will have something more to say about them a little later.

Wm. Falck sailed on Saturday, July 3, from New York. His departure from Pennock Bros. was signalized by much effusion and many souvenirs. Almost every employe had some good token to add to the pile. The masterpiece was a decorated vessel filled with the light wine of Kentucky. However good the contents, it will be many a year before same will be sampled. The outside decorations of this receptacle were unique, fifteen or twenty artists having taken part in producing the harmonious whole, topped off with a bow of red, white and blue ribbon.

Begonia Rex
For page see List of Advertisers.

Now ready for delivery, Begonia Gloire de Lorraine, strong, healthy stuff, all propagated from leaf cuttings, and ready for 3 and 4 inch pots; \$15.00 per 100, \$140.00 per 1000. New winter flowering Begonia "Pres. Taft." Awards—Bronze Medal. S. A. F., Chicago, Nov., 1908; Certificate of Merit by Pittsburg and Allegheny Florists' Club, Newport, R. I., Horticultural Society, and New York Florists' and Gardeners' Club. This beautiful winter-flowering Begonia originated in our nurseries about two years ago; it is stronger, sturdier and more beautiful than any of its predecessors. In color it is similar to Agatha; it is free and continuous flowering from November to April; each flower the size of a silver dollar. \$4.00 per dozen, \$25.00 per 100. Cash with order from unknown correspondents. J. A. Peterson, McHenry Ave., Westwood, Cincinnati, O.

BULBS.—This ad. is our drummer. We certainly have got them and they are O. K. in size and condition owing to cold and damp spring. And the prices are right—delivered to you at 50 per cent. below Dutch bulbs, and being acclimated they flower ten days sooner. They are true, sound, clean, dry, healthy, selected stock. A postal will bring you all details as to varieties to plant or force, with cultural directions. D'Alcorn, The Southern Daffodil Farm, Portsmouth, Va. Where the fine Emperors come from.

OBITUARY.

C. Cramer.

C. Cramer, president of the South View Floral Co., Pittsburgh, Pa., died on June 24, after a long illness.

Justen Olsen.

Justen Olsen, son of Mr. and Mrs. Mons Olsen of Chicago, was drowned on the evening of June 30. The young man was taking a young lady friend, Miss Haakman, out in a rowboat to go aboard a yacht lying half a mile off Jackson Park. In some manner the small boat was overturned and before the life-savers could reach the spot the young couple had gone down for the last time.

CHICAGO NOTES.

Business.

It looks now as if the convention at Cincinnati would show a goodly proportion of Chicago florists in attendance.

Frank J. Keal has his new retail store at 18th and Halsted streets nicely fitted up and reports his first week's business as satisfactory.

Mr. and Mrs. Mons Olsen have the sympathy of the trade in the sad death by drowning of their son Justen, as recorded in this week's obituary notes.

J. A. Mendel, who has a flower store at 422 W. 18th street, will open a new establishment at 1424 W. 18th street in a few days and will also continue the present one.

Charles Fallstrom, who has been associated with his brother-in-law, Chas. Samuelson, in the florists' business in Chicago, has opened a retail flower store in Dixon, Ill.

Most of the wholesalers have signed an agreement to close their stores at 1 o'clock, July 22, to allow their employees to attend the annual Florists' Club picnic. Allie Zeck has charge of the sports and pastimes and Ed. Enders the arrangements.

George Reinberg says that Killarney has proven itself an all-the-year-round rose with him, the new stock just coming in as the old is gone. His Richmonds are especially fine for the season, some of them seen by the writer having stems from 20 to 30 inches and longer.

Personal.

Herbert Stone, of A. Lange's, suffered painful injuries by falling from a step ladder July 5.

The three little daughters of the late Mrs. T. D. Cobb, formerly Miss Tonner, will be brought to Chicago and cared for by Mrs. Cobb's mother. Miss Olga Tonner, who was with her sister at the time of her death, will return in September, bringing the motherless little ones with her.

Vacation Notes.

John Zeck is fishing in Wisconsin. E. Frausin is hunting in the Colorado mountains.

Sidney Wißin is camping out at Lake Zurich, Wis.

Mr. and Mrs. Anton Then have been visiting in St. Joseph, Mich.

Chas. McKeellar and wife are on an automobile trip to Milwaukee.

Wm. J. Kidwell has joined his family at their cottage at Muskegon, Mich.

Miss Myrtle Conner, book-keeper for Bentley & Coatsworth, is away on her vacation.

Fred Klingel, book-keeper for George Reinberg, is spending two weeks in Wisconsin.

John Kruchten has returned from a few days' stay in Milwaukee. His wife will make a longer visit.

F. Strail left July 2nd for a three months' stay with his mother at her summer home in Michigan.

R. C. Northam has returned from the Upper Peninsula of Michigan, where he has been catching brook trout.

John Schoeppel of Bentley, Coatsworth & Co., is visiting in Ohio and will later go farther east on a month's trip.

Josepha Then and her sister accompanied a party on an automobile trip to Delevan Lake, Wis., and were gone several days.

IMPORTERS' PROTESTS.

Appraisers' Decisions.

No. 21444.—Evergreen Seedlings.—Protests 341702, etc., of Wadley & Smythe (New York). Opinion by Waite, G. A.

Protests sustained in part as to evergreen seedlings. United States v. Ouwerkerk (166 Fed. Rep., 1022; T. D. 28953) followed.

No. 21445.—Evergreen Seedlings.—Protest 351388 of Maltus & Ware (New). Opinion by Waite, G. A.

Proof sustained in part, a portion of the goods being held dutiable as evergreen seedlings under paragraph 252, tariff act of 1897.

Court Decisions.

Reed & Keller v. United States. U. S. Circuit Court, Southern District of New York. May 17, 1909. Suit 5333.

Birch Bark—Unenumerated Article—Crude Fibrous Substance—Crude Vegetable Substance.

Birch bark is not a crude fibrous vegetable substance, within the meaning of paragraphs 566 and 614, respectively, of the tariff act of 1897, but is dutiable as an unenumerated unmanufactured article.

On application for review of a decision by the Board of United States General Appraisers.

(Decision in favor of the Government.)

Bayersdorfer v. United States.

U. S. Circuit Court, Eastern District of Pennsylvania. May 12, 1909. No. 50 (suit 1974).

1. Ornamental Leaves—Prepared Flowers, etc.

Ornamental florists' supplies, consisting of various leaves, some of which are in the form of crosses and wreaths and are arranged on wire frames, and all of which have been so treated as to prevent decomposition and to retain or restore their original appearance, are dutiable as "ornamental leaves" under paragraph 425, tariff act of 1897.

2. Natural Flowers, Preserved—Statice Wreaths.

Statice wreaths, which have all the appearance of natural flowers, are dutiable under paragraph 251, tariff act of 1897, as "natural flowers * * * preserved."

3. Ornamental Grasses—Manufactures of Grass.

Ornamental grasses are not specifically described by the provision in paragraph 425, tariff act of 1897, for "artificial grains, leaves or flowers," but are dutiable as manufactures of grass under paragraph 449.

On application for review of a decision by the Board of United States General Appraisers.

(Decision adverse to the Government as to the articles covered by paragraph 3 of the syllabus.)

NEWS NOTES.

Vacaville, Cal.—H. L. Blake has been appointed on the state board of horticultural examiners to succeed Henry Stabler, resigned.

Cambridge, Mass.—Until his new buildings are completed, which it is expected will be the 1st of November, John McKenzie will conduct his business from his greenhouses on Whittemore street.

LOUISIANA GULF RED CYPRESS.

Editor HORTICULTURE:

Dear Sir: It has been called to the writer's attention that there is being offered for sale, Peck Cypress which comes from the middle states, and which has not the lasting qualities of the Louisiana Red or Gulf Peck Cypress. As to the lasting qualities of the Louisiana Red or Gulf Cypress, there is no question.

Such concerns as Bassett & Washburn, Hinsdale, Ills.; Poehlmann Bros., Morton Grove, Ills.; J. F. Wilcox, Council Bluffs, Ia.; A. Graham & Sons, Cleveland, O.; Emil Buettner, Park Ridge, Ills.; Peter Reinberg, Chicago, Ills.; J. Breitmeyer's Sons, Mt. Clemens, Mich.; Wm. L. Rock Floral Co., Kansas City, Mo.; Griswold Greenhouse Co., Ashtabula, O.; Geo. F. Hartung, Sandusky, O., and hundreds of others too numerous to mention, have used Louisiana Red Peck for years, and can attest to its lasting qualities. Some of the above named have used it for ten years or more. Others possibly for less time.

Geo. F. Hartung, of Sandusky, O., made a statement at the Gardeners' Convention in Cleveland last year, that after having been in use in his benches for five years, he turned over Louisiana Red Peck Cypress and found that it did not start to rot anywhere, even at the cross supports.

Within the past week, florists have advised us that when they departed from using Louisiana Red Peck, they got a very inferior article which did not last, and it would be a great injustice to any florist investing his money in lumber for benches, to find that instead of lasting ten or fifteen years, it would only last two or three. Experience has taught that Louisiana Red Peck is the stock that lasts. We believe that florists, in buying Peck Cypress, should insist on getting a guarantee that it is the genuine Louisiana Gulf Red Cypress, or refuse to buy it. There is nothing cheaper on the market today, considering the lasting quality of the wood, than Louisiana Red Peck Cypress, so why use a cheap substitute that will not last half as long? No matter who you buy it from, insist on having Louisiana Red Gulf stock. There are plenty of people to buy it from, and Gulf Red stock is practically free of sap. Sap will rot out in a very few years, while heart Red lasts many years.

We would like this letter published if it meets with your approval, as we are writing at the request of people who are interested, not only in the welfare of themselves, but of the other florists as well.

PHILIP J. FOLEY.

During Recess

NEW YORK FLORISTS' CLUB OUTING.

The annual outing of the New York Florists' Club, on July 1, at Duer's Whitestone Park, was by far the most successful entertainment of the kind the club has ever enjoyed. Over 450, exclusive of babies, went on the morning boat and the attendance was swelled by many who arrived by train, auto, etc., from Long Island points. The day was an ideal one in every respect, the games were well contested, Duer proved himself to be a model caterer and host and everything was done on schedule time. The prizes were given out on the return moonlight sail, amidst great enthusiasm. Only the highest praise for Mr. Bunyard and his assistants in preparing for and carrying out this successful event is heard on all sides. Following is the list of prizes and winners:

Baseball game, boys under 12 years. Well contested and very interesting, each boy on the winning team receiving a regulation ball.

Ladies' bowling match—1st, Samuel Thorne prize, \$10.00 in gold, won by Mrs. Anton Schultheis; 2nd, Arthur T. Bodington prize, \$5.00 in gold, Mrs. Louis Schmutz, Sr.; 3rd, (ladies' \$5.00 satchel) Philip Kessler prize, Mrs. Grimm; 4th, Alfred Zeller prize, \$3.00, Miss Kingston; 5th, Henry Hornecker prize, \$2.00, Mrs. Wittman; 6th, Sperling booby prize, won by Mrs. Masur, score 1. Forty-two other ladies competed.

Baseball game, Benedicts vs. Bachelors. Host Duer's prizes, 10 bottles wine and a box of cigars; won as usual by the Bachelors: Score, 7-0. Messrs. Manda, Reichers, Wuestman, Krekler, Reigo, Golbert, Cantillon, Tierney and Fred Krekler, against Messrs. Hildebrandt, Handel, Hornecker, Bogart, Phillips, Reunison, Meyer, Walbel and Allen. Wm. Kessler umpire.

J. J. Coan prizes, \$5.00 to girls under 5 years—1st, Dorothy Rosback; 2nd, Dorothy Bolles; 3rd, Ethel Kessler.

W. A. Manda prizes, \$10.00 for children born in 1904—Margaret Bogart and Philip Kessler, Jr.

Wm. Hagemann Co.'s prizes, \$5.00, girls 5 to 8 years—1st, Helen Abeel; 2nd, Mary Cashion; 3rd, Bessie Wise.

Charles Schenck prizes, \$5.00, girls 8 to 12—1st, Ethel Adams; 2nd, Marion Hughes; 3rd, Alice Walter.

Young ladies' race, 12 to 16, Jno. A. Scollay prizes, \$10.00—1st, Anna Miesem; 2nd, Jeanne Birnie; 3rd, Freda Schenck.

Young ladies' race, 16 to 20, Harry Turner prize, \$10.00; A. R. Kennedy prize, \$5.00; E. C. Horan prizes, \$5.00—1st, Alice Donnelly; 2nd, A. Birnie; 3rd, M. Brewer; 4th, Flora Knight.

Ladies' race, over 20, prizes by P. O'Mara, \$10.00; Alex. Guttman, \$5.00; M. A. Bowe, \$5.00 1st, Agnes Birnie; 2nd, Margery Birnie; 3rd, Emma Golsner; 4th, Anna Secker.

Baseball game by men over 45 was postponed until 1910.

Exhibition dancing. Three prizes, \$6.00, given by C. B. Weathered. A beautiful exhibit in costume to the music of the bagpipes. (List of awards missing.)

Married ladies' races, for the J. Anstin Shaw prize \$5.00, and the A. J. Langjahr prize \$5.00—1st, Mrs. Hornecker; 2nd, Mrs. Kingston; 3rd, Mrs. Mehan.

Ladies over 45, prizes by Schloss Bros. \$5.00, Bonnet & Blake \$5.00 1st, Mrs. C. Weber; 2nd, Mrs. Her; 3rd Mrs. Winters.

Ladies' walking match, prize by Werth-

elmer Bros., \$5.00—Won by Miss Birnie; Mrs. Stokes 2nd, Miss Guttman 3rd.

Fat ladies' race, over 175 lbs., prizes by A. F. Faulkner, \$5.00—1st, Mrs. Masur; 2nd, Mrs. Schimmell.

The tug of war, Seedsman vs. Florists. Henry E. Lee prize, \$10.00. Won by the florists. W. A. Manda, anchor; Messrs. Hornbecker, Wagenfuh, Weissman, McMullen, Lorenz, J. Manda. Seedsman—Robt. Clucus, anchor; Messrs. Breen, Gayner, Low, Gayner, O'Mara, Hughes, Van Syppveld, Adams, Richards and Wheeler.

Boys' race under 5. Burnett Bros. prize, \$5.00. 1st, Alfred Schultz; 2nd, Phil. Kessler, Jr.; 3rd, Charles Traendly.

Gentlemen's bowling, 3 frames. 1st prize, \$10.00, given by John I. Raynor, won by Andrew Wilson; 2nd, Revero hose, value \$9.00, by E. W. Holt, won by Rassback; 3rd, \$5.00, by W. B. Richards, won by Meconi; 4th, bowling ball, by N. C. Schreiner, won by Miessem; 5th, by Louis Schmutz, won by Fenrich; 6th, by Louis Schmutz, won by Kessler.

The other bowlers were virtually every man on the field who could roll a ball and the scores varied from 10 up to 50, the whole contest gradually filling up all the spare hours of the afternoon, and over 50 bowlers taking part. There was time for a 5-frame contest and the splendid prizes were worth a larger contest.

Hop, step and jump. John T. Withers prizes, \$5.00. 1st, Herman Rozens; 2nd, W. Bogart.

Boys' race, 5 to 8 years. Bobbink & Atkins prizes, \$5.00. 1st, Ira Freeberg, dead heat, Jos. Walter; 2nd, George Walter.

Boys' race, 8 to 12. F. H. Traendly prizes, \$5.00. 1st, George Harvey; 2nd, Robert Burnett; 3rd, W. Manda.

Boys' race, 12 to 16. W. B. DuRie prizes, \$5.00; Gunther Bros., \$5.00. 1st, H. Rozens; 2nd, Al. Rigo; 3rd, Philip Walter.

Male race. Alex. McConnell prize, \$5.00; Charles Millang prize, \$5.00. 1st, Paul Rigo; 2nd, Al. Rigo; 3rd, Chas. Bogert. A great race; winner 4 min. 1 sec.

Quarter-mile race, Yokohama Nursery Co. prizes, \$10.00. 1st, P. H. Kingston; 2nd, S. Gilbert; 3rd, A. W. Sperling.

Fat men's race, 200 lbs. and over. W. F. Sheridan prize, \$5.00; John Birnie prize, \$5.00. 1st, Frank H. Traendly; 2nd, W. A. Manda; 3rd, J. Harvey.

Married men's race. Young & Nugent prize, \$5.00; Ford Bros. prize, \$5.00. 1st, A. H. Donaldson; 2nd, Phil. Kessler; 3rd, Henry Weissman.

Growers' race. Florists' Exchange prizes, 3 volumes. 1st, A. H. Donaldson; 2nd, Jos. Manda, 3rd, J. Bartunik.

Three-legged race. W. A. Sperling prize, \$5.00. Won by Al. and Paul Rigs.

Throwing the ball longest distance. Lager & Hurrell prize, \$5.00. 1st, Phil. Kessler; 2nd, Her.

Press bowling. O. V. Zangen prizes, \$5.00. 1st, J. Austin Shaw; 2nd, J. H. Pepper; 3rd, A. F. Faulkner.

Sack race. Robert Koehne prizes, \$5.00. 1st, Arthur Weston; 2nd, George Harvey.

Seedsman's race. John Young prizes, \$5.00; Moore, Hentz and Nash, \$5.00. 1st, Al. Rickards; 2nd, G. Ydo; 3rd, A. E. Wheeler; Harry Bunyard "also ran."

Largest family. The Harry Bunyard prize, \$5.00. Won by Peter J. Walter of New York city; Joseph McMullen of Whitestone also reported a family of 6 children.

The handsomest baby. H. H. Barrows prize, \$5.00, and additional prizes of \$10.00 by the Outing Committee. Won by Babies Fenrich, Hanig, Schloss, McMullon, Matthews and Traendly.

President Turner was judge in this competition and declared every baby the most charming and all worthy of the highest honors.

The Tri-City Florists' Club met on June 24 with Theo. Ewoldt for their annual strawberry social and discussion of "Poinsettias, Their Propagation and Growing." It was decided

to hold the picnic between July 15 and 22. A. Anderson, H. Gaethje, Jr., and H. Pauli are committee of arrangements.

The first annual picnic of the Minnesota State Florists' Association will be held at Big Island Park, Lake Minnetonka, July 15, 1909.

The Greek Retail Florists' Association of New York city will have their annual festival on July 29 at Wetzel's Point grove.

The Gardeners' and Florists' Club of Boston will picnic at Randolph grove on July 28, says Dame Rumor.

PARIS SPRING SHOW.

This year on account of the greenhouses on the Cours la Reine being demolished the Paris and Spring Show was held in the Tuileries Gardens in a large tent. The space was much more limited in consequence of the change and the exhibits were not therefore set off to so great an artistic advantage as has been the case in past years. The President of the French Republic visited the show and awarded several decorations as is the custom. The grand prix d'honneur was won by M. Parent for forced fruits, the 2nd grand prix was awarded to Leveque & Son for roses. Other grand prizes were taken by Moser, Croux, Carriatt, Debril, Lachaume, Maron, Adnet, Ferard, Poirier, Bellard.

THE MOTH-KILLING BEETLES.

So many people have been destroying the parasites and beetles imported to prey upon the moth pests that State Forester F. W. Rane, now at the head of the gypsy and brown-tail moth work in Massachusetts, has issued a warning to the public against destroying them.

He asks all persons to exercise care and not to kill these precious beetles or the larvae which frequently are found among the gypsy and brown-tail caterpillars under the burlap of trees.

The new insect, mostly seen by people on trees, and the one which has largely been the object of everyone's attack, is the Calosoma beetle, a handsome greenish, predaceous beetle, which is one of the most valued enemies of the gypsy moth the State forces have been able to import.

The adult female beetle lays her eggs in the earth, where they hatch, and the larva crawls to the surface hungry and ready to tackle the first "gyp" or brown-tail caterpillar it may find, or a number of them for that matter.

The larva is a black, smooth-skinned, somewhat shiny sort of caterpillar, extremely active and wriggly, while the adult beetle is quite large, powerful and of a handsome bronze green color. The adult scales trees with great rapidity in its search for the caterpillars, and, having found one, uses its powerful legs to embrace the caterpillar as it sucks out the juices from its body. Often in its writhing the caterpillar will cause the beetle to topple from the limb to the ground, but the beetle never lets go its hold and continues its meal undisturbed by the fall.

In order to learn accurately how generally this imported beetle has spread. Mr. Rane asks those who observe then to report the fact to his office at 6 Beacon street, Boston.

THE TUSsock Moth.

The white-marked tussock moth, for many years a dreaded pest of village and city shade trees, last year became destructive in many apple orchards in northwestern New York and was thus brought strongly to the notice of Station entomologists. Bulletin 312 of the Station at Geneva gives an outline of this outbreak, with brief descriptive notes on the insect, and indicates the repressive measures that should be adopted.

Copies of this bulletin may be had free on application to the New York Agricultural Experiment Station, Geneva, N. Y.

TO DESTROY MOSS ON LAWNS.

The results of experiments conducted by Der Kgl. Gartnerlehranstalt at Dablen, and reported in Der Handeltsgartner (March 13), indicate that a 5 per cent. solution of sulphate of iron is effective of ridding lawns of moss. After the application of the green vitriol solution, the grass should be sprinkled several times with a weak (3 per cent.) solution of nitrate of soda.—Gardeners' Chronicle.

San Francisco, Cal.—The MacRorie-McLaren Co. have secured the contract for planting the ground belonging to the Spring Valley Water Co. in San Francisco and vicinity. Over 5,000,000 trees of various species will be required to complete the work.

"Every Bug Has his Dose."

Insect-destroying preparations that do their work well and effectively are the cheapest. Bowker's Arsenate of Lead and Bowker's Pyrox are recognized standard insecticides and fungicides for both indoor and outdoor use. Bowker's Insect Emulsion destroys many kind of plant lice, black and green flies, etc. Call or send for catalogue.

SPECIMEN HYDRANGEAS

Large Plants Grown in Tubs and Half-Barrels for July and August Flowering

We make a specialty of these, and have a grand lot of plants in the finest possible condition. Our plants have never been so well budded as they are this season.

Fine plants in tubs, \$2.00 and \$3.00 each.

Large plants in half-barrels, \$5.00 and \$7.50 each.

A FEW SEASONABLE SPECIALTIES

BOXWOOD PYRAMIDAL. Fine plants 3 ft. high, \$2.00 each; 4 ft. high, \$3.00 each; 4½ ft. high, \$4.00 each.

RUBBER PLANTS (Ficus elastica). Very large, bushy plants in tubs 4 ft. high, fine for summer decoration, \$3.50 each.

PHOENIX ROEBELENI. Extra fine plants, 5-in. pots, \$18.00 per dozen.

CROTONS. Strong plants, 3-in. pots, \$3.00 per dozen; 5-in. pots, \$6.00 per dozen; 6-in. pots, \$9.00 per dozen.

CANNAS. Buttercup, Souv. d'Antoine Crozy, Pierson's Premier, Mlle. Berat, L. Patry, Florence Vaughan, etc. Strong started plants, 3½-in. pots, \$5.00 per 100, \$40.00 per 1000; dormant roots, \$3.00 per 100, \$20.00 per 1000.

CALADIUM ESCULENTUM. Started plants, \$6.00 per 100.

CASTOR OIL BEANS (Ricinus). 3½-in. pots, \$6.00 per 100.

MUSA ENSETE (Abyssinian Banana). 8-in. pots, \$1.00 each.

GERANIUMS. Double Gen. Grant. Extra fine plants in bud and bloom, 3½-in. pots, \$8.00 per 100.

GERANIUMS, assorted. In bud and bloom, 3½-in. pots, \$6.00 per 100.

NASTURTIUMS. 3½-in. pots, bushy, \$4.00 per 100.

ENGLISH IVY. 3½-in. pots, \$12.00 per 100.

GERMAN IVY. 2½-in. pots, \$3.00 per 100.

AMPELOPSIS VEITCHII. Strong plants, 4-in. pots, \$15.00 per 100.

F. R. PIERSON CO., Tarrytown-on-Hudson, NEW YORK

Araucarias OUR Specialty

Araucaria Robusta Compacta and **Excelsa Glauca**, Specimen Plants, Spring 1908 importation, 7 inch pots, 25, 30, 35, 40 inches high, 6 years old, suitable for the veranda, porch or lawn, \$2.00, \$2.50, \$3.00 each, worth double that amount.

Same Varieties, April 1909 importation, 15-20-22 inches high, \$1.00, \$1.25, \$1.50.

Araucaria Excelsa, 5, 5½, 6 inch pots, 2-3-4 years old, 40c., 50c., 60c., 75c., \$1.00.

Kentia Forsteriana, 6-7 inch pots, 25, 30, 40, 50 inches high, \$1.00, \$1.25, \$1.50, \$2.00, \$3.00 each. **Belmoreana**, 6 inch pots, 5 to 6 leaves, \$1.00, \$1.25, \$1.50.

Cocos Weddelliana, 3-4 inch, 15c., 18c., 25c.

Adiantum Hybridum, valuable for fronds for cutting, big bushes suitable for 6, 7, 8 inch pots, 30c., 40c., 50c.

Araucaria lutescens, 4 inch, 25c.

Begonia Gloire de Lorraine, 4 inch, 25c.

Lonsdale light pink and the dark pink.

Sago palms, 10c. per leaf.

Cash with order please.

New Michaelmas Daisies

Perennial Asters, or, as they are commonly called, Michaelmas Daisies, are among the most charming of our autumnal flowering plants and nothing is capable of producing more beautiful effects in garden and woodland at that season of the year. In addition to the many excellent wild species which are common to North America there have been introduced during the last few years several beautiful hybrids and varieties which are worthy of cultivation in all gardens where the best hardy plants are desired. I see that the Messrs. Farquhar are wisely cultivating large numbers of these newer sorts in their Roslindale Nurseries for they are sure to become general favorites with the florists and flower loving public. To see Michaelmas Daisies to the best advantage they need planting in a border of good width devoted entirely to them and then a fine mass of flower results as depicted in the illustration, but each plant should be given sufficient space to properly develop and if the growth can be tied out to several stakes instead of being bunched up to one a much larger amount of blossom is obtained. An excellent way also of cultivating these improved varieties is to take off single shoots with the roots attached either in fall or early spring and pot them up in small pots until they become rooted putting them out in their permanent position about the middle to the end of April. If kept growing to one stem they make very beautiful decorative plants as can be seen by the photograph of a single specimen. The accompanying picture represents a plant seven months after the single shoot was taken from the parent plant.

One of the greatest charms of these new varieties is the exquisite habit many possess which makes them so adaptable for growing as specimen plants or using in a cut state. In the majority the flowers are small or of medium size and are produced on slender pendulous

branches from the ground, and if they are grown to one main stem a perfect pyramid of bloom is obtained.

Some of the best varieties are: Enchantress, Hon. Edith Gibbs, White Diana, Cordifolius Profusus, Delight, Sensation, Triumph, Brightness, King Edward VII and Ideal, all of which grow from four to five feet in height. Golden Spray, Decorator, Osprey, Veinatus Perfectus and Thora all grow a yard high and produce a wonderful display of blossom.

Arthur. E. Thatcher

Arnold Arboretum.

Notes from the Arnold Arboretum

An interesting shrub, *Tripterygium Wilfordii*, entirely new to cultivation, is flowering this summer for the first time at the Arboretum. This shrub, a native of northern China and Korea, was introduced by Mr. J. G. Jack who collected seeds near Seoul in 1905. The genus *Tripterygium* of which only two species are known, belongs to the Celastraceae, but is entirely different from any other member of this family in cultivation. *Tripterygium Wilfordii* is a shrub from two to five feet high with upright or somewhat arching angled and warty stems and light green foliage; the slender-stalked alternate leaves are ovate to oblong in outline, serrate and long pointed and measure four to six inches in length. The slightly fragrant whitish flowers appear at the end of the branches or branchlets in pyramidal panicles from three to seven inches in length; the individual flowers are very small, about three-quarters of an inch in diameter and have small narrow petals. The three-winged seeds are ovoid in outline and about one-third of an inch long, greenish at first, becoming brownish when fully ripe. The shrub cannot be called particularly showy, but as it is flowering at a time when not very many shrubs are in bloom, it is a welcome addition to our summer-flowering shrubs; the fruits too are rather conspicuous. It has proved hardy at the Arboretum.

After the well known *Sorbaria sorbifolia* (*Spiraea sorbifolia*) has gone out of bloom another very closely related species but recently introduced from Japan is beginning to flower. This is *Sorbaria stellipila* (*S. sorbifolia stellipila*) differing from the first named species in their generally longer and narrower leaflets and somewhat larger and broader panicles; from a botanical point of view the chief difference lies in the pubescence of the ovaries and of the stalks of the individual flowers, also in the sometimes rather slight stellate pubescence of the leaves. Though in habit and general appearance it is almost like *S. sorbifolia*, it merits recommendation for its somewhat later flowering time. Like the other species of the genus it is a very showy plant when in bloom and like these it has the disadvantage of looking rather unsightly after the flowers have faded, as the discolored and shriveled rests of the flowers remain on the panicles. In a well kept garden the panicles should be removed after the flowers have faded. Like *S. sorbifolia* the new species is perfectly hardy.

Flowers and the "Glorious Fourth"

A correspondent reminds us that we have six great festival days in our calendar year and that July 4th is the only one in which we don't use flowers. He comments severely on our heathenish way of celebrating this great

national anniversary and advises a campaign in behalf of a floral rather than a gunpowder observance of the day. This sounds good. What have the florists to say about it? What are they ready to do to promote this great reform?

Floral gifts for graduation scholars

The prohibition of floral gifts at school graduations in a number of places has naturally called forth a very general protest among the florists, whose business has thus been interfered with. The overdoing of the custom by the friends of some pupils and consequent humbling of those children less fortunate, which is given as the main cause for the interdiction, seems to us to be hardly a valid reason for the cutting off of a custom so pretty and impressive. We have in mind a certain college for young ladies where for a number of years very stringent rules were enforced as to the garb of the students at graduation and other public exercises, for reasons similar to the above mentioned. The ban was eventually removed—wisely, we think, for the result has shown that as a rule good sense has prevailed, undue ostentation being of rare occurrence and then harmless to everybody excepting the party indulging in it. Children who have reached the age for school graduation have already lived long enough to fully realize their comparative lot among their fellow beings. Those less fortunate have become inured to privation and in the great majority of those to whom fortune has given an abundance their natural nobility and generous impulse can usually be relied upon to restrain them from any undue assumption of superiority. Let the children have all the flowers their friends like to give; the time will not be long a-coming when there will be more lemons than flowers for all of them, rich or poor.

To appeal to the S. A. F.

This suggestion has been made that this grievance regarding graduation flowers be brought to the attention of the Society of American Florists at its next meeting in Cincinnati and that the Society be asked to take up the matter on behalf of the florists of the country. The suggestion is a good one and the national organization is the proper intermediary in all such business which virtually concerns the trade in general. We might remark by way of encouragement that the S. A. F. has usually come out on top in any campaign which it has seriously entered into for the benefit of the profession. It is certainly very nice and convenient to have so potent a champion which may be appealed to in time of trouble. The Society has never demanded any assurance of compensating allegiance on the part of those whom it has befriended in the past but it would have been much more creditable to the florist trade had gratitude and allegiance been more generally displayed by the beneficiaries and it is to be hoped that the future may see a great improvement in this respect. Considering what the S. A. F. has been able to accomplish with the support of so small a percentage of the horticultural trade as appear on its rolls the possibilities with a full representative membership seem almost boundless. Returning for a moment to the flower question, we note in a contemporary the over-ripe statement that the city of Boston annually provides a bouquet for each graduating pupil in the public schools. This was true up to three years ago, when the custom was abandoned. It has been said that one reason for the discontinuance was the unsatisfactory character of many of the "creations" supplied to the city on such occasions under the name of bouquets.

Clerodendron Thomsonae (*Balfouri*)

A more useful greenhouse plant would be hard to find than this magnificent climber. It can be used as a specimen trained either as a pyramid, or balloon-shaped. As a pillar plant for twining around the supports of a conservatory it is ideal. Covering a wall or draped gracefully around a doorway it makes a beautiful effect. It has been known to the gardening world since 1861 coming from Old Calabar, about that year. I have often wondered why commercial florists have not taken to growing it as a spring flowering plant, as it can be had in bloom for Easter or earlier, and, if properly treated, as late as the end of September, and, as to its lasting qualities, we have a plant here in Medford, Mass., placed on a north piazza that has been in flower five weeks and it is still quite fresh.

This *Clerodendron* is easily rooted in a temperature of about 65 to 70 degrees, and if given a good open rich loam will make quite a plant in a couple of years. After it has reached that age is a good time to figure at what season you want it to flower. We give it two months' rest only giving enough water to keep the wood from shrivelling. At the end of that time most of the leaves will have dropped. During the resting period, if possible keep in a house with 10 degrees lower temperature than when growing. Around 70 is good heat to start the ripened off plant into growth and a shift into a slightly larger pot will give larger panicles of flowers. In early spring it will take two months to get the plant into flower but as the season advances it will take much less time. We figure on starting another plant for a succession when the first begins to show the crimson color on the end of the flower and so on during the season.

There are many other *Clerodendrons*—shrubs and climbers, but for greenhouse purposes the above-mentioned as a climber, and *Fallax* as a shrub, are in my opinion as good as any. The above culture agrees very well with *C. Fallax* only I think it likes a slightly higher temperature and does not want so severe a drying off as *C. Thomsonae*.

George F. Stewart.

West Medford, Mass.

The New Hybrid Freesias

The new varieties of *Freesia* brought into commerce by the well-known Dutch firm, C. G. Van Tubergen, and called *Tubergeni* under various varietal names, are creating a favorable impression among European horticulturists. These hybrid varieties are of tender rose, lilac,

pure golden yellow, etc.; and they flower as freely, are as vigorous in growth, as fragrant and as easily cultivated as the ordinary *F. refracta*.

The blooms possess the same delightful fragrance of violets as that species.

In the year 1901 the firm of Van Tubergen received from an English correspondent, Mr. Armstrong, resident in S. Africa, several *freesia* tubers with the remark that these were pink flowering. Naturally Herrn Tubergen was somewhat suspicious concerning the color of the new comer; as all the *freesias* obtained from that part of the world were outwardly of a brown tint, or white with yellow staining. *F. aurea*, another Cape species, has a yellow tint, and small flowers, and is a gardener's variety only, with no market value.

Freesia Armstrongi, a name given to the variety by Herrn Tubergen when it bloomed, was employed as the pollen parent in crossing with *F. refracta alba*, and the cross originated the *F. Tubergeni* varieties. By comparison with *F. refracta alba*, the flowers of *F. Armstrongi* are considerably smaller, but the value of the hybrids consists in their lovely tints, and more numerous flowers. *F. Armstrongi* differs from *F. refracta alba* in its weaker habit, its less stiff pose and weaker flower stalks which reach an unusual height, and the many side flower-shoots produced. The chief flower stalks carry from 9-12 flowers and the side stalks mostly 6-8 each, as against a total number of 8-9 on *F. refracta alba*.

F. Armstrongi was next crossed by Herrn Tubergen with the largest flowered *F. r. alba*, snow white and destitute of all spotting, the last named being the seed bearing parent; and the male, the most intensive in color of the varieties he had. Several hundred of seedlings of this cross have been raised, of carmine and rose tints, with many gradations; and some differences in habit. The darkest in color and strongest in growth will be selected for perpetuation, and for use in future crossings; and some of these were shown at the Haarlem Show, obtaining the Golden Medal, as being the most "valuable quality."

Some continued crosses of *F. refracta*, *F. r. alba* and *F. Leichtlini* with *F. Tubergeni*, have given in the second generation, quite other results. Along with many valueless varieties, a certain percentage of desirable new forms and rare colors in the flowers may be anticipated; and thus far, the results have been satisfactory, and tints produced hardly to be hoped for in *Freesias*. One variety, which from the first, exhibited great vigor of growth and flowers of a soft mauve color, has received the name *F. Tubergeni Amethyst*, and is already in commerce; and it promises to be much sought after. The variety received an award of merit at a recent meeting of the R. H. S. in London.

Andrick Moore

THE SPECIAL CONVENTION NUMBER

In Honor of the

S. A. F. Twenty-Fifth Anniversary

At CINCINNATI

WILL BE ISSUED ON AUGUST 14

This will be an issue of exceptional interest and will be widely circulated and widely read. Its value as an advertising medium for all floral and horticultural material cannot be over estimated. S. A. F. trade is always worth a special effort at Convention time. Send your order in early and it will have our best attention.

NEWS OF THE CLUBS AND SOCIETIES

A JOINT MEETING AT MINNEAPOLIS.

The Minnesota State Florists' Association held their first field meeting this season at the Rose Garden of the Minneapolis Park Department on July 2, 1909. At the same time the Minnesota Rose Society had a meeting there, also. The attendance was not very large, probably on account of the extremely hot weather.

The rose garden is located on Lyndale Park, near the northeast corner of Lake Harriet. On all sides it is screened with woods, protecting it from the cold, dry, northwestern winds.

There are sixty-four beds (one variety to each bed), two-thirds of which are planted with H. R.; the rest with H. T. On one end there are four large beds with Rugosas and the whole is enclosed with a fence along which there are climbers. Outside of the fence the grounds are planted out with different wild roses. The garden was planted only last year and considering this it looked very good and promising.

Among the H. R. the following stood the climate test best so far: Francois Michelin, Mabel Morrison, Clio, General Jacqueminot, Helen Keller, Magna Charta, Pride of Waltham, Mrs. John Laing, Perfection des Blanchés, Gloire de Margottin, Jules Margottin. In H. T.: Lady Moyra Beulerc, Pink Cochet, White Maman Cochet, La France, Killarney, and Gruss an Teplitz wintered very well, are making good growth and are very free bloomers.

In climbers the Polyanthas did not do so well, except Rubin, which came through the winter very good. The Wichuraianas fared better than the above and with but few exceptions did very well.

Boule de Neige, Duc de Rohan, Marchioness of Downshire, Countess of Rosberry, Alfred Williams, Duchess of Fife, Richmond, Mme. Abel Chatenay, Jennie Dickson, Xavier Olibo, Victor Hugo, Marchioness of Dufferin, Louise Van Houtte and Bertha Gieman got very badly winter-killed and it looks as if some of these varieties will have to be discarded.

All in all the Rose Garden is proof that roses can be grown even in this severe climate. It is educating the people, they come and see the roses, take the names down of those that are doing well and in this way influence the nurseryman to get the variety they want, and not something "just as good."

The inspection of the garden being over, the members of the two associations retired to a shady spot, where Mr. Wirth gave a short talk on the preparation of the rose garden, explaining the original lay of the land and the changes that had to be made to get a garden with good exposure and drainage. A walk was taken from here to the greenhouses, where the perennials were inspected, refreshments served and the picnic committee reported that the picnic would take place on July 15 at Big Island, Lake Minnetonka.

SOCIETY OF AMERICAN FLORISTS AND ORNAMENTAL HORTICULTURISTS.

What Is the Matter with Cincinnati?

The writer has just returned from a visit to Cincinnati in regard to Convention matters, and after a thorough canvass of the situation is prepared to most emphatically state that both Cincinnati and the Cincinnati florists are "All Right."

They seem to have anticipated every difficulty and every discomfort which might arise to their visitors and have taken effective steps to avoid them. They say unanimously that Cincinnati is not so hot a place as people think, but as they have learned that the impression has gone out that exceptionally hot weather is likely to be experienced at the Convention time, they are taking steps to avoid that discomfort all along the line. They have decided not to decorate the hall, which would cost \$150 or \$200, but instead to put all of that money into extra ventilating fans so that there will be a good breeze stirring in every part of the hall and visitors will be perfectly comfortable at all times. At the Gibson House, which will be headquarters, they have arranged that a fan will be furnished in every room, without charge, for all those who engage rooms in advance.

The President's reception will not be held in a stuffy hotel ball-room, but will take place outdoors in a park up on a hill where the cool breezes play and where the absence of a vest or even a coat will not cause comment. After the reception there are great doings in store, but the writer is sworn to secrecy regarding them for the present.

The arrangements for bowling are admirable. The alleys are ideal and it is stated that no one can get hot there unless from the violence of his own physical exertions or from mental anguish caused by failing to make as many strikes as he would like.

Friday will be devoted to an excursion by boat up the river to a large island maintained as an amusement park. Here also much secrecy was maintained and many knowing looks were exchanged among the local men regarding the "stunts" which were to be pulled off. I did hear accidentally, however, something about a barbecue—an ox and two or three sheep to be roasted whole, and it was stated that the ball game would be held at this place in the afternoon. Take it all in all, the prospects for a comfortable time and a most enjoyable one could not be better.

Superintendent Murphy is the busiest man ever these days. He has already sold over ten thousand feet of exhibition space and says that the way inquiries and applications are coming in there is no doubt but what all available space will be taken, even though the full space is three or four times as great as at Niagara Falls. His address is William L. Murphy, 311 Main Street, Cincinnati, and those who have not already arranged for exhibition space should take heed that they make application at once or it may be too late.

W. N. RUDD, Secretary.

July 9, 1909.

PITTSBURGH FLORISTS' AND GARDENERS' CLUB.

Since the abandonment of our old hall after the April meeting, owing to the construction of a new building on its site, the club has been meeting in the rooms of the different cut flower commission houses. This arrangement will probably continue during the summer and early fall months, while the attendance at the meetings is comparatively small. The meeting of Tuesday, July 6th, was held in the rooms of the McCallum Co. Picnic committee reported in favor of Keystone Park for Thursday, July 15th.

When the subject of the S. A. F. Convention, Aug. 17-20, at Cincinnati, was brought up, it developed that there would probably be a good attendance from our club and the president appointed E. C. Reinemann to take charge of the transportation arrangements.

The only exhibit was a large one of potted fancy caladiums by the North Side Park Conservatories, Jas. Moore, foreman. The size and fine quality of the exhibit drew much commendation and a vote of thanks was given Mr. Moore.

There will be no August meeting. Subject for the September meeting: "Gladioli and Seasonable Flowers."

H. P. JOSLIN, Secy.

ST. LOUIS FLORIST CLUB.

The last meeting of the current year of the St. Louis Florist Club took place on Thursday afternoon, July 8. Only twenty members were in attendance including all the officers. The present officers have been very faithful, having missed very few meetings during this term. The secretary stated that half of the delinquent members had paid up and the other half were given until the August meeting before being dropped from the rolls. The trustees reported that all arrangements for the annual outing on July 21st, at Romona Park were complete. Everything will be free for the florists and their friends without any expense to the club. The list of prizes is large and valuable.

A letter was received from the St. Louis Horticultural Society asking the members to co-operate in giving a fall flower show and the Club showed its good will by voting to assist and to provide cash prizes for \$50 to be competed for by local growers only.

W. C. Smith who will this year have charge of local S. A. F. matters stated that he had arranged with the Big Four R. R. for a special car known as the Florists' Special for the trip to Cincinnati. He has quite a good list of names already and expects to fill his car.

Officers were nominated as follows: Frank J. Fillmore and W. C. Young for president, John Cannon and Henry Kahrs for vice-president, J. J. Beneke for secretary, William C. Smith for treasurer and Fred H. Weber and A. J. Bentzen for a three-year term trustee. Nominations are still open and election will take place at the August meeting. The question came up as to holding out-door meetings during the months of August and September. A. J. Bentzen invites the Club to hold its

August meeting at his place and on a vote the invitation was accepted. For the September meeting Frank Weber of the H. J. Weber & Sons Nursery Co., also invited the Club to meet at their grounds and the kind invitation was also accepted.

NATIONAL SWEET PEA SOCIETY.

(Continued from our Issue of last week.)

At the session on Wednesday evening an interesting discussion followed Prof. Craig's paper on the desirability of establishing test gardens. It being stated that the Cornell staff at Ithaca would be glad to take up the work and that there was abundant ground there for the plantations, the proposition was favorably acted upon and a committee consisting of Prof. Craig, A. T. Boddington, Maurice Fuld and William Sim was appointed to co-operate on behalf of the Society.

On Thursday evening a final session was held at which the usual resolutions were passed and announcement made of a committee meeting at Cincinnati at the time of the S. A. F. Convention. The attendance of the public at the exhibition was very small although the New York daily papers gave considerable space to an account of it. The banquet on Wednesday evening was a very pleasant affair. Thirty gentlemen were present and remarks were made by every one, J. Austin Shaw contributing a poem full of congratulatory sentiments.

The Awards.

Howard Gould, gardener Harry Turner, won the Boddington cup; William Duckham the W. Atlee Burpee cup, first prize of the Morris County Gardeners' and Florists' Society, first Watkins and Simpson prize and one special mention; W. W. Rawson & Co., the Peter Henderson & Co. cup, the W. Atlee Burpee prize, the Harry A. Bunyard prize, first John Young prize, the Frank H. Traendly prize, the C. C. Morse Co.'s prize, the Chas. H. Totty prize and the A. T. Boddington prize, and three seconds and two third prizes; Chas. R. Hedden, W. W. Rawson silver medal, one third prize and two special mentions; Hon Seth Low, gardener Hugh Birch, the Stumpp & Walter prize, the H. A. Dreer prize, the J. M. Thorburn & Co. prize, the F. R. Pierson Co. prize, the Florists' Exchange prize, the Jerome B. Rice prize, the H. E. Fiske Co. prize, five seconds and one third; A. T. Boddington, the C. C. Morse & Co. cup; A. T. DeLaMare, the H. F. Michell prize and one second; T. S. Ormiston, gardener J. F. Anderson, the Harry Turner prize and two thirds. Lager & Hurrell, honorable mention for display of orchids. Special mention to Howard Gould for *Acalypha Sanderiana hispida*, Rosary Flower Co. for table decoration, Julius Roehrs Co. for decorative plants and orchids, Jos. A. Manda for orchids and John Lewis Childs for callas and iris.

CLUB AND SOCIETY NOTES.

The florists of Indianapolis are arranging for their picnic in the near future.

The Kentucky Society of Florists will have their picnic at Stower's grove, July 22.

The Maryland State Horticultural Society will hold its summer meeting at

FIELD OF 2-YEAR PEONY QUEEN VICTORIA

Gilbert H. Wild, Sarcoxie, Mo.

Mountain Lake Park, July 31 and August 1, 2, 3.

The Massachusetts Horticultural Society will hold a sweet pea exhibition in Horticultural Hall, Boston, on July 17 and 18.

The Georgia State Horticultural Society will hold its annual meeting in the Hotel Georgian, Athens, Ga., on August 4 and 5, opening at 10.30 a. m. The program presents an attractive array of topics for consideration.

OBITUARY.

Mrs. Godfrey Aschmann.

Margaret B. Aschmann, wife of Godfrey Aschmann, died July 10, in her 64th year. The funeral services were held on Wednesday, at 2 p. m., at her late residence, 1012 W. Ontario St., Philadelphia. Interment was private, at Chelton Hills.

Philip Hagenburger.

Philip Hagenburger, for thirty-five years florist for the Lake Shore Railroad, in charge of decorations between Buffalo and Toledo, died suddenly at his home in Mentor, Ohio, on July 5, at the age of 64. A wife and four children survive him.

Mrs. John E. Haines.

Word reached Philadelphia by telephone on the morning of July 13, recording the death of Mrs. John E. Haines, Bethlehem, Pa., wife of the well known carnation grower.

A. C. Ullrich.

Adam C. Ullrich, a native of Germany and one of the old-time florists of Ironton, Ohio, died on June 27 at the age of 83. Eight sons and a daughter survive him.

A. G. Burtnett.

Abraham Garrison Burtnett, a former florist in Maiden Lane, New York city, died at his home in Bronxville on July 5, aged 72.

During Recess

GARDENERS' AND FLORISTS' CLUB OF BOSTON.

The annual club picnic will be held at Randolph Grove, Randolph, Mass., on Wednesday, July 28, 1909. To reach the picnic grounds: Take any elevated, tunnel or surface car in Boston to Dudley Street; from there take any electric car to Mattapan, where a Randolph, Avon and Brockton electric passes the grounds; running time about one hour. A circular giving full list of sporting events is ready for distribution.

There will be an unusually attractive collection of prizes for the various athletic events, donated by club members and firms.

Tickets for gentlemen are 50 cents each and are procurable only from Peter M. Miller, 32 South Market St., Boston. No tickets will be sold after July 24.

J. P. A. Guerineau will captain the Commercial base ball team, while R. W. Curtis will captain the Privates. All necessary particulars concerning sports and other matters will be found in the circular. Good weather only is necessary to make the coming picnic the best ever.

The club will hold a field day with W. B. Whittier & Co., Framingham Nurseries, on August 14; the Eastern Nurseries, Holliston, will also be visited if time permits. On September 11 a field day will be held with W. H. Wyman at the Bay State Nurseries, No. Abington.

A cordial invitation is extended to any who are not club members to attend the picnic and have a pleasurable day, also to be present at the field days.

W. N. CRAIG, Secretary.

The institute of the State Board of Horticulture held at University City, Mo., for three days was largely attended and one of the most successful ever held by the organization. About 150 of the visitors were guests of Mayor Lewis at luncheon on Wednesday and a banquet was tendered the members at Shaw's Garden, St. Louis, on Thursday noon.

RELICS OF THE SAN FRANCISCO FIRE.

An especially difficult feat of landscape gardening that has taken the time of six men for nearly two weeks, was accomplished by the MacRorie, McLaren Co., when two huge thirty-foot specimen Phoenix canariensis were removed from the abandoned residence of H. E. Huntington on the top of Nob Hill, San Francisco, and transported a distance of five hundred miles to his new residence at Los Robles, near San Gabriel, Cal.

Palm-moving is quite an every-day occurrence in California, but I question whether any have ever been moved such a great distance with so much

success. The accompanying illustrations will give a fairly good idea of the size of the palms. Each palm when boxed weighed eighteen tons, and a string of ten horses was required in order to transport the palms to the railway station, a distance of two miles, through some of the busiest streets in San Francisco.

The palms figured were also of more than ordinary interest to the citizens of San Francisco, having stood there for over twenty years. In addition to this fact, they might be classed as most interesting relics of the earthquake-fire of 1906, at which time Mr. Huntington's magnificent residence was destroyed, along with everything in that district. The fire stripped the palms completely of their foliage, leav-

ing only the bare and blackened stems. Since that time, in the course of three years, fresh growth has been made by them, new well-developed crowns have appeared and they bid fair to become two of the most interesting objects on the Huntington estate.

The work of removal was under the supervision of D. MacRorie, and from start to finish was done without a hitch.

WM. McM. BROWN.

CIVIC IMPROVEMENT IN CHICAGO.

On July 3rd the Commercial Club made public its plans for the enlargement and beautification of the city of Chicago. The work of this club has covered a period of thirty months and is submitted in a 164-page volume, giving detailed plans and pictures of proposed changes that will show the new Chicago in a harmony of parks, boulevards, plazas, public buildings, and perhaps most needed of all, systematized traffic.

First is the improvement of the lake front by building out into the lake a park and lagoon to run the length of the lake front and the establishment of a big harbor at the river's mouth. Second, the creating of a system of four highways outside the city with cross-roads conveying to the heart of the city like a spider's web. Third, improvement of railway terminals. Fourth, the acquisition of the long-talked-of outer park system. This provides for the buying up of the natural forests surrounding Chicago on three sides. Fifth, refers to the more systematic arrangement of the streets; and sixth, to the centers of intellectual life and civic administration. As the club realizes, the first step now is to educate the people up to it. The proposed changes are illustrated by a series of paintings, drawings and designs exhibited in the Art Institute and opened to the public, July 12th. These are the original paintings by Jules Guerin, Ferdinand Janin and other artists, and the photographs are of the beauty spots of other cities.

This movement has been under way ever since the World's Fair, and the long struggle for the improvement of the city will be appreciated by people all over the country.

Louisiana, Mo.—Stark Bros. Nurseries & Orchards Co. have elected A. E. Senteny secretary, to succeed the late Hon. Eugene Stark; Eugene Duncan, director; and William, son of W. P. Stark, assistant treasurer.

THE SECOND NATIONAL APPLE SHOW.

Widespread as was the interest in the first national apple show last winter, when growers from various districts in the Northwest and South and other parts of the continent exhibited their choicest fruit in competitions, ranging from a full car of 640 boxes to a single apple, there are already many indications that the second exposition, planned for the week of December 6 at the state armory in Spokane, will bring even greater results in popularizing the apple as a national fruit and food.

REN H. RICE

Sec'y Mgr of National Apple Show, 1909.

The board of trustees, headed by E. F. Cartier Van Dissel, has plans in hand which will give more room than was allotted last year, when 75,000 square feet of floor space was filled to overflowing, making it necessary to refuse exhibits after the opening day, as no additional room could be prepared to accommodate them.

The original organization, headed by Louis W. Hill of St. Paul, president of the Great Northern Railway Company, has been maintained with two changes in the executive board. Harry J. Neely becomes first vice-president, succeeding L. F. Williams, retired, and Ren H. Rice succeeds Mr. Neely as secretary-manager, with headquarters in room 216 of the Hutton building, Spokane, where a staff is already at work preparing for the coming show.

"The show will be complete in every detail," said Secretary Rice in making the preliminary announcement, "and advices already to hand indicate that we shall have even a greater variety of exhibits than in 1908."

Denver, Colo.—Albert E. Mauff has filed a complaint against the State Horticultural Board charging that Mrs. Martha Shute is drawing the salary of secretary while another person holds the appointment.

Moving Large Palms.

BOUGAINVILLEA GLABRA SANDERIANA UNDER GLASS.

It is seldom that Bougainvilleas of any species are planted out in beds of soil, but they are almost universally cultivated in pots, with the results that the plants make an extraordinary vigorous growth and bloom sparsely; yet the culture of the plants is of the simplest kind when planted out in a properly prepared bed of soil, and the flowering period lasts for nearly six months, and includes the winter season at which time the plants afford the best paying blooms for cutting purposes.

The method of treatment pursued by Max Mayer, gardener at Schloss Tutzing, as given by him in "Moller's Deutsche Gartner-Zeitung," No. 24, 1909, is as follows:

"In the months of January or February short cuttings in a soft condition are taken and struck in the propagating house or dung bed frame, in silver sand washed clean of all loamy particles. The cuttings should be placed in the bed in a slanting direction, and not more than one-half an inch deep; the temperature of the bed being 73 degrees to 82 degrees Fahrenheit. By the more moderate degree of warmth they make roots in three to four weeks. Cuttings taken from the upper branches root more quickly than others. The rooted cuttings should be potted in light rich soil mixed with a loamy kind, and placed in a warm dung-bed. When well rooted they may be afforded manure water at frequent intervals, and in the month of July receive frequent pinching of the points of the shoots. In August the plants may be set out, without any disturbance of the ball, on a bed placed in the middle of a span-roofed house provided with portable lights, and means of heating. The bed must be provided with good drainage and a layer of decayed manure, with a layer of rather heavy soil topped with a lighter description. The plants should stand in this bed at about 3 feet apart, and the entire soil of the bed built up to a height of about 3 feet. When the plants are established in the soil, the lights should be removed, and not brought into use until cold threatens at night. During rainy weather the lights should be put on the roof. Syringe the plants morning and evening, and apply shading at about mid-day, when the sun's rays are fierce. In order to mature the young wood and cause the fall of the older leaves let the soil be kept dry from the end of the month of August. As soon as the glass house must be heated, it is time to commence to afford water to the plants and to take care that as great an amount of sunlight as possible reaches them. With the above described treatment the plants develop fine bloom in the first year in December.

"In the second year during and after flowering, afford manure, pinch the shoots and train the plants. The lights should be removed earlier the second year than in the first. According to the time of year when the plants are required to flower, so must the dry period commence. Aged plants can be brought into flower at the beginning of November.

FREDERICK MOORE.

CARNATION BRITANNIA AS A POT PLANT.

H. A. Barnard of Low's sends the accompanying picture, remarking that as nearly all the carnation growers whom he met on his recent tour in America spoke of Britannia as a failure, he is glad to be able to present so good an evidence of its worth. The plant illustrated was exhibited at the Temple Show. It was 2 years and 5 months old and carried 12 flowers, 58 developed buds and 219 flowering growths, the flowers measuring 3 1-2 inches in diameter. It was propagated in January, 1907, flowered in a 7-inch pot all the following winter until latter part of June; was re-potted into

a 10-inch pot in July, 1908, and flowered from the following autumn. It is only fair to state that it was fed exclusively on Low's Carnation Fertilizer for the past 9 months. It has been often suggested that pot-grown carnation plants would be a welcome addition to the exhibition of the American Carnation Society. Perhaps the foregoing may have a suggestive value to our carnation growers in that respect.

TOTTY LEASES FLORHAM FARMS GREENHOUSES.

C. H. Totty has leased the Florham Farms Greenhouses at Madison, N. J., which have been under Mr. Herrington's management hitherto. It is an immense plant and affords Mr. Totty a big field for the enterprise and business ability which he has displayed in so marked a degree since establishing himself commercially in Madison a few years ago. We know of no one better entitled to the good wishes of the trade, and HORTICULTURE cordially joins in the congratulation.

NEW PUBLIC PARKS AND GARDENS IN GERMANY.

As an evidence of the astonishing progress and wealth of the towns in Germany we may state that the municipality of Heidelberg has sanctioned the payment of 421,000 M. for a new central cemetery on the right bank of the Neckar. Mannheim is about to lay out a park of about 100 hectares for a sum of 293,000 M., according to the estimate of the town landscape gardener F. Keerl, who will be entrusted with the carrying out of the work.

PROPAGATING ARAUCARIA EXCELSA.

Editor HORTICULTURE:

Allow me to give L. M., your inquirer on page 42 of HORTICULTURE, more complete directions for propagating Araucaria excelsa.

As is well known all branches of the Norfolk Island pine will root but only cuttings of the leader will give symmetrical plants. To get a large amount of leaders, cut the leader and soon several adventitious buds on the main stem between the branches of the top whorl will start to grow. Some growers simply girdle the leader to produce the breaking. One grower of my acquaintance makes a cut immediately under the top whorl, puts a bit of charcoal in it to keep it open and mosses it, cutting it off and potting it as soon as the moss is filled with roots.

By which ever method used the practice is the same after the top whorl has broken. When the new breaks are 3 or 4 inches long they are carefully removed with a heel and put in the cutting bench; the whorl is cut off and the plant carefully grown on. Soon the next whorl breaks and the treatment is the same, and the same process is repeated until each whorl has given several terminal cuttings. In this way each plant is made to produce 20 or more cuttings, according to the number of whorls of branches, that will produce symmetrical plants, specimens just as good as are imported. B.

A PROFITLESS NARCISUS.

Editor HORTICULTURE:—

Two years ago last fall I purchased from our local sedsmen and planted two thousand of the double white narcissus, Alba plena odorata. The next spring the foliage and spikes looked to be in good condition and the plants were full of flower buds. But the buds never opened; they seemed to blast and rot without passing beyond the bud stage. From the two thousand bulbs I got one hundred and twenty-five cut flowers. I thought it might be due to an unfavorable winter, so I did not dig up and throw away the bulbs, but mulched them well and waited anxiously to see what they would do this spring. The same thing was repeated, but a little worse than the preceding year. I scarcely got a hundred blooms from the two thousand bulbs. I might mention that the bulbs are planted in two separate lots about three-quarters of a mile apart on widely different soil.

Under the circumstances do you think it worth while to keep these bulbs any longer, or would you throw them away now? I would very much like to grow this flower, as it comes just at a time when I can use it to advantage.

Yours respectfully,
EMSWORTH.

Alba plena odorata is not a profitable bulb to grow, outdoor or under glass. I have tried this for three years, but the loss is too great. It is about the average that you get 6 to 10 per cent. flowers. While the narcissus keeps on growing right along, just before flowering the buds dry up; therefore, I should not trouble any longer with the bulbs.

IMPATIENS HOLSTII NANA LIEG- NITZIA.

(Translated.)

On the occasion of a visit paid to a little flower show at Schweidnitz in Silesia in search of what was new, I came upon a group, hidden in a very unfavorable half-dark part of the hall, of *Impatiens Holstii* in flower, whose dwarf, compact growth and close flowers of a vermillion color arrested my attention. *Impatiens Holstii nana* Liegnitzia, the raiser, Oskar Otto of Liegnitz, had named it, and I will acknowledge the name openly pleased me not, for I do not like the Latinizing of plant names so long as one is in the position to give a German name to a new plant or variety that will become popular among the people as a new child among flowers. Still, this apart, this Red Riding Hood *impatiens* quickly pleased me, and I named her *Fleissige Lieschen von Liegnitz*, on the spur of the moment—a very passable name. This pretty child among flowers was noted down, and shown at the great exhibition at Berlin.

Convinced of the good points of this novelty, I undertook the distribution commercially of the variety, and was a witness during the days of the exhibition, how readily the public took to the little plant. Ach! See how sweet, how charming is the *Fleissige Lieschen*, and how distinct the coloring, and how modest. And the idea took me to imagine how a group of the azure blue *Clematis Lazurstern* (Goos and Koenemann) would look with an edging of the same.

This novelty was selling well the entire year—in the spring as a pot-plant, and more especially as an edg-

ing plant in the garden, or as filling for flower beds of one color, in partial shade, and in full sunshine. Also in the autumn it was still being sold as a window plant, where it would blossom all the winter, at least in a spot where a modicum of the sun's rays could reach the plant.—Emil Chaste, Wilmersdorf, in *Die Gartenwelt*, May 21, 1909.

(An illustration in colors in the above corroborates the writer's encomiums.)

Seed Trade

AMERICAN SEED TRADE ASSOCIATION.

President, J. C. Robinson, Waterloo, Neb.; First Vice-President, M. H. Duryea, New York; Second Vice-President, F. W. Bolgiano, Washington, D. C.; Secretary-Treasurer, C. E. Kendel, Cleveland, Ohio; Assistant Secretary, Leonard H. Vaughan, Chicago.

WHOLESALE SEEDSMEN'S LEAGUE.

F. W. Bruggerhof, Pres.; Burnet Landreth, Sec'y.

Secretary Wilson's Reported Retirement.

The report that Secretary James Wilson of the National Department of Agriculture is to retire December, next, will be read by the seed trade with interest. That Mr. Wilson is a most adroit politician no one will deny. In fact it has often been said that he was the most skillful politician in any of the administrations with which he has been identified. No charge against Mr. Wilson's personal integrity has ever been made by any responsible person and nothing of the sort is intended here, but without wishing to discuss the Secretary in a general way, it may be said that he was no friend of the seedsmen. During his administration the free seed evil has attained enormous proportions, growing from around 11,000,000 pkts. in 1896, to 60,000,000 for 1910. It cannot be claimed that the Secretary is in no wise responsible for this great increase in the distribution of free seeds, for though he probably has not specifically asked for it he has not opposed it, while many of his subordinates, like greedy cormorants, have continually asked for more. Many of these subordinates have spoken in contemptuous and disparaging terms of the seedsmen of the United States, and it is earnestly hoped that his successor will break up many of the bureaus or bureaucracies which have grown up under his administration. The Hon. Charles Frederick Scott of Kansas, who report says has been slated as Mr. Wilson's successor, is a newspaper man, but regardless of his profession it is hoped he will not continue the policy of antagonizing so important an industry as the seed business.

The Corn Crop.

According to the statistician of the New York Produce Exchange, this year's corn crop is to be 3,000,000,000 bushels, easily the largest ever raised, and indicates of course a high condition of the crop. If field corn is in such fine condition sugar corn is probably not lagging much, and in fact, reports from the West, including Ohio and Nebraska, would bear out this statement, but in New York and New England quite the reverse is the case, and particularly New York. Outside of Monroe and Washington counties, but little sugar corn seed is raised in New York state, though thousands of acres are grown for canning. At the present time, with a few exceptions, this corn is not at all promising, and will have a hard time reaching the canning state before frost, while its chances of making seed

ONION SETS **Get Our Prices** 79 and 81 **E. KINZIE STREET, CHICAGO**

are very much less. However, with the right conditions, corn can make rapid growth and it is not at all safe to figure on a failure just yet.

Pea Prospect.

Peas have not improved since last report, and unless all reports are misleading, there will be a short crop of seed. How short cannot be stated at present, but estimates will be made in a few weeks. Michigan is the chief sufferer, and it is due to lack of rain. Wisconsin seems to be in better condition, but reports from there are more or less conflicting, and the true condition cannot be given as confidently as that of Michigan. As to other crops, no material change has been noted, but the crisis will soon be reached for better or worse.

A Good Outlook.

Business with the seedsmen is well nigh over for this season, excepting for the sale of turnips, spinach, and late planting of beans, but the latter is a relatively small matter, and most of the business is of a routine character. If the volume of next year's business equals this, there will be little complaint, and present indications are certainly favorable.

Notes.

Oklahoma City, Okla.—The Western Seed Co. is in bankruptcy.

Fremont, Neb.—The Western Seed & Irrigation Co. will make an addi-

tion to their seed warehouse and bids are in order.

Shenandoah, Ia.—The Henry Field Seed Co. declared an 8 per cent dividend at their annual meeting on July 1.

Columbus, O.—The Livingston Seed Co. will locate their mail order and seed departments in the new building recently leased by them.

Yankton, S. D.—The Gurney Seed Co. have purchased additional land to accommodate their increasing business and will erect a modern brick and concrete seed warehouse 72 x 76.

Aschersleben, Germany. — Gustave Jaensch has retired from the firm of G. Jaensch & Co. and Lorenz Zopez is made first director. Mr. Zopez has carried on the seed business under the name of Carl Kampf for the past five years.

SEED LEGISLATION, ITS USES AND ABUSES.

Prof L. H. Pammel, Iowa State College of Agriculture, presented a valuable paper on the above topic before the American Seed Trade Association at Niagara Falls. He said that cheap seeds mean poor seeds. The passage of laws in Europe while improving quality there has thrown poor quality seeds on the market here. Seed testing work originated by Dr. Nobbe, at Tharandt, Germany, in 1867, revealed startling conditions in the German trade in seeds. Later, other control stations started in other parts of Europe and laws were enacted correcting abuses. Pioneer work was done in this country by Dr. Jenkins, of Connecticut thirty years ago. Subsequently by McCarthy, N. C.; Dr. Beal, Mich.; Butz, Penna.; Deval, Selby and Hicks, Ohio; Hillman, Nev.; Robbert and Freeman, Kansas; Harvey, Maine; Garman, Ky.; Stewart, Rolfs, Pammel and King, Iowa; Jones, Vt.; Hicks, Pieters, Brown, Key, Hillman, of U. S. Dept. of Agriculture; Clark, Paton, Saunders of Canada. This work has revealed the necessity of laws to restrict the sale of seeds containing weed impurities, and to demand a reasonable standard of vitality. The average gardener and all small consumers depend for their seeds upon the seedsmen, who must therefore furnish a good quality, reasonably free from noxious weeds and showing reasonably good germination. The farmer is anxious to put all blame on seed merchant, and the seed merchant claims that he cannot be held responsible for seed after it has left his hands. The farmer in many cases is responsible for weediness of seeds. Tests made by the writer and Miss Charlotte M. King in the spring of 1908 and 1909 on the vitality of grass and clover seeds showed results in field tests lower than in incubator and greenhouse tests, more strikingly so during the unfavorable season of 1909.

The lecturer believed it would not be wise to fix by law a standard of purity and vitality as in Iowa but better to allow a commission to fix these every year, especially as to vitality. Seed will vary as to germinating power, depending on many factors. Prof. Holden has shown how poor the vitality of corn was in Iowa under different conditions there. The same is true of other seeds. For a federal commission let the members be the Secretary of Agriculture, a seed expert and a seedsman; in the case of states, the commission to consist of the State Botanist, the director of the experiment station and a seedsman.

States should have uniform laws, so that seedsmen can adjust themselves to them; no law should be passed that cannot be honestly and fairly well enforced, and buyer and seller should be equally considered. Laws should specify what noxious weeds are prohibited, and when these are present they should be specified on the label. Every law should contain sections on adulteration of seed. Substitutions of Canadian Blue Grass for Kentucky Blue Grass or Fescue for Awnless Brome Grass should not be tolerated nor should seeds be misbranded. The farmer should be held equally responsible with the seed merchant, and subject to the same laws without any

favoritism to him. Clover and grass fields should be inspected before harvesting, by an expert, and those foul with weeds should not be harvested.

The various experiment stations should publish more bulletins about seeds. The lecturer doubted the wisdom of publishing the names of seed merchants who have sold seeds found to be below standard requirements. Co-operation is wanted between all interests, seedsmen, farmers and seed merchants. Imported seeds from Europe should be rigidly inspected, and importations stopped of seeds containing Canadian Blue Grass, Canada Thistle and Dodder in clover seed. Prof. Pammel endorsed the bill proposed by Mr. Green to be introduced in Congress. He called attention to the variance in results of tests by the various stations and U. S. Department of Agriculture, and declared that until methods are more uniform results will continue to vary. He urged the American Seed Trade Association to pursue experimental testing and compare results with those obtained by Mr. Edgar Brown, of U. S. Department of Agriculture in checking up the tests by the various stations, etc.

PHILADELPHIA SEED TRADE NOTES.

Alfred L. Hart of the C. C. Morse Co., San Francisco, was a visitor on the 10th inst.

The three big B's of the seed trade. Bruggerhoff, Buist and Burpee, sailed on the "Cedric" on the 10th. Mr. Buist will make but a short trip, his main object being to get the benefit of the ocean voyage.

Simon & Son, the new seed firm on North Water Street, are well pleased with their first season's business, and are hunting around for additional warehouse space to make room for the largely increased new crop seeds to arrive from now on.

The Philadelphia Seed Co., \$5,000 capital, is the name of a new concern chartered recently. The names of the incorporators are not known at this writing. We have enquired at the principal seed houses without results. An enquiry has been sent to Harrisburg, the state capital.

No. 518 Market St. takes on a new aspect as the months roll by. More light, better facilities, occur from time to time to the bright minds of the Michell organization. The outfit will be pretty nearly perfect by the time the old home at 1018 is abandoned. It's not every house that has such a chance to make the new shell perfect before shedding the old.

AMONG THE PALMS.

The Heacock palm-growing establishment consists of about 80,000 sq. ft. of glass. There are a few side lines, but palms are the chief crop. A hearty welcome always awaits there the inquiring student in horticulture, and as Wyncote is only about a dozen miles outside of Philadelphia, with excellent and frequent train service, visitors are numerous—both for pleasure and business. On our trip we had the benefit of the cheerful companionship of John G. Gardner. Mr. Heacock conducted us through the vistas of kentias, arecas, cocos—in all sizes from thumbs to six, eight, ten and fourteen-inch pots. We saw none over six feet in height; but there were some very fine specimens of that size—and they are the limit of the commercially profitable. There is no money in very large palms—when their actual cost is carefully figured. Kentia Belmoreana is the popular favorite. All the others are subsidiary. Areca lutescens is not in the running any more. Only a few houses of it are now being grown.

The demand for palms the present season is fully equal to last year, which was the best in the history of the establishment. Two houses are devoted to carnations, mostly of Mr. Heacock's new pink variety, Dorothy Gordon, which is to be disseminated next spring. Cattleyas and cypripediums are becoming a more extensive side line here of late to keep pace with the growing commercial importance of the orchid. A house of Princess of Wales violets is another side line. Mr. Heacock's palms are shipped to all parts of the country and he has a deservedly high reputation for first-class stock and careful packing. His green-houses have all been constructed on modern principles by his brother, who is a horticultural builder. Thermostats, Lonsdale evaporating pans, and other up-to-date accessories are in evidence. Altogether, a most enjoyable and profitable two hours can be spent in looking over this fine plant—which by common consent of Philadelphians is now dubbed—"The Home of the Palm."

Flower Market Reports.

BOSTON Very dry times in this market just now—a dearth of rain and a dearth of business. There is but little activity in any line of trading. Quality remains about the same as for several weeks back on most staples. Killarney is easily the best rose in sight and it is coming in from a number of sources; Killarney is small of bud and weak in color. Carnations are very inferior. Sweet peas are unprecedentedly abundant and there is no possible outlet for a large proportion of those received. Lilies have shortened up in supply and nobody complains thereat.

BUFFALO Trade is very moderate and there is an abundance of about everything in the cut flower line. Carnations are more than over-plentiful; the severe hot weather of the past two weeks has not alone forced them all in but most of the blooms are only half size and the prices low, there being no call for them. It would certainly be the wholesalers' delight if there could be one McKinley Day each week during these times. Sweet peas are being grown so extensively around this section that they are hardly worth while handling by the wholesaler; in fact, the larger portion are peddled direct to retailers from the farmers' wagon. Lily of the valley is forgotten altogether since the weddings ceased; other outdoor material such as snapdragon, candidum, lilies, daisies, asters, etc., are prominent amongst the list of daily receipts. Greens in good supply.

CHICAGO The condition of the market is about as usual at this time of the year. Good roses are very scarce and when orders come in a lively move is necessary to find the stock to fill them. Beauties are in fair supply. Carnations in general are poor and are considered out of the market, but J. A. Budlong and Poehlmann Bros. are selling as fine stock as anyone could wish. It is a question no one can answer, but themselves, how they can produce such blooms in July. The first asters are in and of course quite small. Sweet

peas are good again and the first Golden Glow chrysanthemums are here to remind us that fall is just ahead. Lilies are in good demand. The shipping trade has been greatly hampered the past week by the floods in the west and south. The express companies have been obliged to refuse consignments of flowers because there was no assurance that trains would go through. Mail that should have reached Chicago Friday morning did not come until Sunday and many florists were obliged to disappoint their customers. Kansas City was especially inconvenienced, mail from there taking 48 hours to reach Chicago.

DETROIT Business has been good with most of us principally on account of the numerous conventions in the city, which seem this year to be more disposed to spend money than they were last year. In a large automobile parade, except for large floats which called for big plants of all descriptions the more elaborate decorations were done in artificial flowers; still there were several hundred cars trimmed with large bunches of flowers which made a pretty show and used up a large quantity of outdoor material.

PHILADELPHIA For a “good old summertime” week. Monday,

July 5th to Saturday, July 10th, was a fairly satisfactory proposition in the wholesale cut flower trade of Philadelphia. Carnations have dropped off in quality very conspicuously, and the asters are not yet good enough to take their place satisfactorily. Most of the latter arriving are under sized and short stemmed. Maryland and Kaiserin hold the fort among the roses, although Beauties are pretty good, and Killarney fair. The best Killarneys are still coming in from down east points. A few white Killarneys are arriving from local sources but they are rather short stemmed so far. Water lilies of the fancy varieties are scarce—there is plenty of common stock from the Jersey ponds. Sweet peas are not very good, and supply limited—yet plenty for the demand. Orchids move fairly well. Irises are over except for a few cold storage lots which will last for a week or two yet. Inside gladioli are nearly over and dependence now is on the outside crop: Pink oleanders are something of a novelty among the outdoor items. A charming flower, chaste and delicate like a camellia or gardenia, and fragrant—but not good to eat. Beware!

SOUTHERN CALIFORNIA NOTES.

Edward W. Davies, late of Denver, Colo., has taken a position as rose grower for J. W. Wolfskill, Los Angeles.

P. D. Barnhart of Los Angeles, has taken the position as editor of the Pacific Garden, the Pasadena horticultural paper.

A few weeks ago the members of the Pasadena Gardeners' Association paid a visit to Jno. Bodger & Sons' sweet pea farm at Gardena.

J. R. Norris and son of Troy, Ohio, who spent the winter months in Los Angeles have gone east, and thence to Europe to replenish stock for next season.

Charles Winsel, seedsman and nurseryman of Los Angeles, has just purchased five acres of land at Montibello, which he intends to stock with palms and high grade shrubbery.

Recent visitors in Pasadena: Leonard Vaughan, Chicago; W. Atlee Burpee, and H. M. Earle, Philadelphia; Mr. Kirby of Henderson & Co., New York; Ernest Benary, Jr., Erfurt, Germany.

FLOWER MARKET REPORTS.

(Continued from page 83)

INDIANAPOLIS The past week has been one of extremely hot weather, and there has been little doing except an occasional wedding. The intense heat has told on the sweet peas and they are about gone. Carnations, and roses with exception of Beauties, Kaisersins and Killarneys, are of inferior quality. Bright colored gladioli are arriving in good shape and are very much in demand. A fine lot of lilies of all kinds are in but meet with little demand. Green goods are in good supply. Chrysanthemums are looking well with all of the florists and the indications are that there will be a good supply this fall. A few asters are now on the market, but it is a little early for the outdoor crop.

NEW YORK The supply of greenhouse-grown flowers in this market has been steadily diminishing, but there is an abundance for all the requirements

of the trade at this time when the flower store neighborhoods are forsaken by everybody who is not compelled to show up. Outdoor material is, of course, in heavy supply with but few takers for a large part of it, but the economically inclined retail dealer finds in it a welcome resource for a few vases of any garden or pasture flower at a trifling cost suffices to fill the show window and if, perchance, a customer for something more choice should drop in, the ever-ready telephone will put him in prompt touch with all the goods he wants without taking any risks at all. The wholesale section is a great and inexhaustible reserve supply—the best asset that the New York retail trade enjoys. Lilies are less abundant and prices are approaching normal. Sweet peas are an avalanche and do not pay for picking.

John Congdon, traveling representative of the W. W. Castle Company, Boston, has just returned from a trip in western Massachusetts with a big list of orders for Castle hot water boilers and Automatic Circulators.

Calla Bulbs.
For page see List of Advertisers.

BULBS.—This ad. is our drummer. We certainly have got them and they are O. K. in size and condition owing to cold and damp spring. And the prices are right—delivered to you at 50 per cent. below Dutch bulbs, and being acclimated they flower ten days sooner. They are true, sound, clean, dry, healthy, selected stock. A postal will bring you all details as to varieties to plant or force, with cultural directions. D'Alcorn, The Southern Daffodil Farm, Portsmouth, Va. Where the fine Emperors come from.

OIL AS A FUEL FOR STEAM BOILERS.

We have of late years heard a good deal of discussion regarding oil as a fuel under our steam boilers, but notwithstanding the fact that all admit the saving of dollars after installment of oil-burning boilers, the expense of installation deters.

For some time I have collected data and for the benefit of those enterprising florists to whom our grandfather's ways are obsolete I present a rough sketch, showing how to transform a coal burner into an oil burner.

One condition is essential, viz.: that the boiler must withstand a 50-lb. pressure and a hydrostatic test doesn't cost much. When a boiler is quoted

bars are covered with clay three to four inches deep. The steam pressure would also necessitate a water injector and I think the most favorable would be "Penberthey's." To do away with watching day or night there are in the market many automatic devices for regulating oil, water and steam supply, and although they may be expensive at first sight they would save their cost in a short time. As regards draught regulation, it would probably be necessary to cut down the chimney, or put a damper in. Of course, the flues will only need cleaning at rare intervals.

The advantage of oil installation may be summed up as follows: Saving of space—no ashes or coal to handle; abolition of smoke; cleanliness; and an immense saving of labor. But

very large cupped blooms and pointed buds; Wm. Shean, H. T., a deep pink bloom, of an unusually large size and fine form, which received the gold medal of the National Rose Society; Lady Fair, a fine sport of Mrs. W. J. Grant (Belle Siebrecht) which is a great beauty; Paul Lede, one of the best roses of recent introduction, with well-developed flowers in which there is a yellow suffusion apparent in fine sunny weather; the climbing variety of Mrs. W. J. Grant, with very fine striking foliage; Reine Olga von Wurtemberg, a climbing H. P., with rampant, half pendant shoots, the flowers semi-double and of a cerise color; Flora Fairfield, a perpetual flowering Rambler, which has the property of flowering on the lateral shoots.

On the occasion of my visit, Messrs. Stuart Low & Co. entertained about 150 of their employees, heads of departments, clerks, etc., at a supper in the village assembly room; and it was most gratifying to note the good feeling existing between employers and employed at this agreeable function, which inaugurated the formation of the new partnership.

FREDERICK MOORE.

CATALOGUES RECEIVED.

W. E. Marshall & Co., New York.—Bulb Catalogue and Illustrated Price List for 1909.

H. F. Michell Co., Philadelphia, Pa.—Summer Catalogue for Florists and Gardeners. Seeds, bulbs and sundries. Forest Nursery and Seed Co., McMinnville, Tenn.—Wholesale trade price list of ornamental trees and shrubs.

at 50-lb. pressure it means that it has been tested to 75 lbs. The price of oil is another consideration. The price of lower grade crude oil varies according to locality and can, in some parts, as for instance Ohio, be obtained for 75c. or \$1.00 a barrel.

To heat a greenhouse plant of say fifteen 25x100 ft. houses one steam boiler 22 H. P., would consume six barrels in 24 hours. The oil tank can (as most of our boilers are underground) be placed on the level, but care must be taken to protect it from contact with fire. Then run a 1-2 inch pipe which should have a valve close to the tank (in case of accidents) down to your "jet." This "jet" is a very simple affair, as can be seen from the sketch, and can be bought cheap. It is important that the nozzle of the jet be as short as possible to prevent the oil from separating before leaving the nozzle. Valves should be put on both steam and oil pipes for the regulation of supply and these valves would be safest about 12 in. from inlet into the jet. The steam pipe, of course, connects in the "dome" of the boiler.

To place the "spray breaker," it will be necessary to test your spray, which is best done with an iron plate. When the position is reached where the spray is most broken, build a fire-brick partition right across the bars, about half-way up. This is to prevent the spray from striking the back wall and leaving the front of the boiler cold. The

most of all to be considered is the constant regular pressure of steam which, with coal fuel, is practically impossible to obtain.

In our present time of competition it behooves every florist to look out for economy, and cutting down the coal bill would mean approximately 7-8 per cent on money invested, as well as per boiler a year for labor, close on \$900—that is, if equipped with automatic regulators. A. PENGEL.

STUART LOW & CO. NURSERY.

The nursery of this eminent English firm is situated at the modern village of Bush Hill Park, a mile or thereabouts from the town of Enfield, and about a dozen miles from London. Fruit trees, roses, etc. grow elegantly on the fairly heavy soil of this section and in the hottest summers never look distressed, or are checked in growth, as is often the case in more easily worked, light or sandy soils. That trees are transplanted from such land with an excellent system of roots, goes without saying. Among the newer varieties of roses noted on a recent visit were Betty, a H. T. of a coppery tint, shaded with yellow, having large petals; Antoine Rivoire, H. T., a very light blush, occasionally flushed with buff, excellent for planting in masses; Leon, a deep blush rose of great vigor; Madame Segond Weber, H. T., a salmon pink rose having a bright centre,

CHICAGO NOTES.

Two Failures.

One of the oldest establishments in Chicago, was closed by order of the Municipal Court July 9th, on action brought by the owners of the building. Chas. Schneider was in business at the corner of Randolph and State when the Central Music Hall occupied that site. When this building was torn down and the ground bought by Marshall Field he went into business on Wabash Ave. Two years ago he went back to State opposite the old location, but rent is very high and his hard struggle came to an end last week.

Many of the wholesale florists in Chicago are heavy losers in the failure of A. G. Lozier of Des Moines, Ia., who are settling with their creditors for five cents on the dollar. They find little satisfaction in the fact that this same company failed once before and are now preparing to start again. At their first failure they settled at ten cents on the dollar.

Personal and Miscellaneous.

C. M. Dickinson is at Pelican Lake, Wis.

Wm. A. Peterson is with his family taking an auto trip through the Northwest.

Mrs. W. E. Horton, bookkeeper for Bassett & Washburn, is spending a two weeks' vacation in Milwaukee.

Benj. E. Gage and bride are expected home next week from a months' auto trip. Their home will be in Evanston.

Visitors: Lyal C. Waterbury, manager for Denver Wholesale Florist Co., Denver Colo; H. A. Fisher, Kalamazoo, Mich.

John Thorpe is not gaining and his condition is very serious. All his children are here and to all appearances the end is not far off.

F. F. Lindsay, president of the Hiawatha Garden Co., of Minneapolis, is spending a few days in Chicago. This company will enlarge extensively next year.

The five bowlers having the highest average to date, July 12th, in the bowling contest are: John Zeck, Allie Zeck, Victor Bergman, Geo. Asmus and T. Yarnell.

Lord & Burnham are now nicely established in their Chicago office and Mr. Sykes reports satisfactory business. They are contemplating an exhibit at the Cincinnati convention.

Phil Schupp is selling June blooms of My Maryland and Mrs. Marshall Field. Though not classed as summer roses and though the plants have bloomed well all winter it is an interesting fact that they are producing excellent results now.

City Forester Prost is in the east visiting the principal cities, making a study of what they have done, and it is expected that he will bring home many valuable hints regarding the work in Chicago. J. P. Pedersen is attending to Mr. Prost's duties during his absence.

MISCELLANEOUS WANTS

WANTED TO BUY—Complete greenhouse plants and all kinds of greenhouse material, to be taken down and removed at once. Terms cash. Address I. Smeerman, 229 Livingston St., Newark, N. J.

WANTED—Second-hand bags and bur-lap, any kind, any quantity, anywhere. Richmond Bag Co., Richmond, Va.

WANTS, FOR SALE, ETC.

Advertisements in this column one cent a word. Initials count as words. Cash with order. All correspondence addressed "care HORTICULTURE" should be sent to 11 Hamilton Place, Boston.

HELP WANTED

GOOD MEN

When you need good men, skilled or unskilled, Write:

THOS. H. BAMBRICK

34 South 7th Street Philadelphia

Help of all kinds, including that for Florists, Nurserymen, Seedsmen and the Horticultural trade generally.

WANTED—An honest, sober, industrious man who understands the growing of pinks, mums and single violets, principally, for local trade. To call at 40 Columbus St., Newton Highlands, Mass., at once. E. A. M., Newton Highlands, Mass.

SITUATIONS WANTED

GARDENER, 31, married, wants situation. Honest, sober, thoroughly understands the care of gentleman's place, growing flowers, fruits, vegetables and landscaping. Ed. Waither, Millwood, N. Y.

FOR SALE

GREENHOUSE PLANT FOR SALE

Plant can remain on mortgage, consisting of three houses, 32x142, 18x75 and 10x15 respectively, with cold frames and sash. Built by Lord & Burnham Co., steam heated with Burnham boiler. Strictly up-to-date and with every convenience for commercial business. Apply to Norcross & Stratton, with Jones, McDuffee & Stratton, 33 Franklin St., Boston.

FOR SALE—Special 16 x 18 and 16 x 24 double thick glass in "A" and "B" qualities. Buy now and save money. Write PARSHESKY BROTHERS, INC., 59 Montrose Ave., Brooklyn, N. Y.

FOR SALE—Retail Florist business with good bedding and landscape trade. Will sell cheap for cash, as we are going West. Address R. S. B., care HORTICULTURE, Boston, Mass.

FOR SALE—1-8 section Weathered boiler in good condition; nearly new. N. F. McCarthy & Co., 84 Hawley St., Boston, Mass.

DISSOLUTION NOTICE

NOTICE IS HEREBY GIVEN that the partnership heretofore subsisting between us, the undersigned Stuart Henry Low and Edward Valentine Low, carrying on business as Nurserymen and Orchid Growers at The Royal Nurseries, Bush Hill Park, Enfield, Middlesex, under the style or firm of Hugh Low & Co., has been dissolved. The said Stuart Henry Low will in future carry on business at Bush Hill Park aforesaid under the style of "Stuart Low & Co." and the said Edward Valentine Low will carry on business at The Orchid Nursery, Vale Bridge, Haywards Heath, Sussex, under the style of "Edward V. Low." All debts due to and owing by the said late firm of Hugh Low & Co. up to and including the 2nd June, 1909, will be received and paid respectively by Frederick Orlando Collier of 15, 16, and 17 Eldon Street, London E. C., Chartered Accountant.

DATED this 15th day of June, 1909.

PHILADELPHIA NOTES.

Business was very dull up at "the Home of the Palm" at Wyncote one day last week. So "the boss" thought he would take a run into town and look around. He was careful not to step on any cracks in the pavement to spoil the luck. When he got back a man from Washington had been there and left an order for \$1,169.75. Something always happens when one goes away from home! That last statement may be true; but, as Mrs. Sweeney says, if you want something to turn up, you'd better go out with a crowbar and pry it up. The crowbar used by "the boss" the past two years has been liberal advertising in the trade papers. It's not enough to have the goods. You have to tell people. The boss has and does both!

Eva E. Foss, late of the Pennock-Meehan ribbon department, was married July 3rd, to Arthur George Watson Dent, of Collingswood, N. J. The event proved a complete surprise to the lady's fellow-workers in the P. M. establishment—showing that the old adage about a woman being unable to keep a secret is not always true. Bless you, my children! May you live long and prosper!

The Pennock-Meehan Co. are gradually abandoning the fibre vase as a flower holder. Galvanized iron buckets, hand-made, of special construction, and various depths and diameters, are the thing now. These cost twice as much but they will last four times as long. Besides

they are cooler, and flowers keep much better than in the fibre receptacles.

Edward Reid left on a three weeks' southern tour on the 9th inst. Business and pleasure combined.

W. Crawford of Kift's is authority for the statement that the magnolia leaf is destined to supersede the galax in design work, the reason given being greater durability. One can stem magnolias now in the slack season.

New Chicago Sprayer

This sprayer is made of aluminum with two brass plates, one fine, one coarse. These are easily removed and quickly cleaned. Spraying face 4½ inches wide, nozzle 6½ inches long; ¾ inch pipe connections. These sprayers will never wear out and are said by users to be the finest on the market.

Send to us for testimonials from growers using them.

Price \$2.50 Each

E. H. Hunt, 76-78 Wabash Ave., Chicago, Ill.

and they will be just as fresh and good six months or a year hence. The cost is a little higher but not enough to have any weight when the advantages are considered.

Harry Woltemate, Jr., son of H. C. Woltemate, Mt. Airy, succeeds G. W. Waterfield on the old Butler place at Chestnut Hill. Mr. Waterfield has joined the forces of Alfred Burton.

Visitors last week: Mr. Nunally, Jr., of the Nunally Co., Atlanta, Ga.; Geo. H. Cooke and G. Milton Thomas, of Washington, D. C.; Mr. Schoenhut, Buffalo, N. Y.; Jno. A. Haines, Bethlehem, Pa.

We regret to report that W. K. Harris has not improved during the past week. A telephone message from Mark Mills, his son-in-law and business manager, indicates that his condition is causing his family grave anxiety.

The transportation committee of the Florists' Club desires to hear at earliest convenience from those wishing to join the Philadelphia party to the convention. The larger the party the lower the fare. Address either Jno. Westcott, E. J. Fancourt, or Arthur Niessen. Non-members of the club from nearby towns will be welcome.

NEWS NOTES.

Mt. Carroll, Ill.—John Lambert of Savanna intends to start in the greenhouse business here.

Chillicothe, Mo.—The large smoke stack of R. M. Isherwood was destroyed in a recent severe gale and will be replaced by one of brick.

It is rumored that a purchaser for Horticultural Hall, Philadelphia, has been secured at a figure not far from \$600,000.

PUBLICATIONS RECEIVED.

"American Medicinal Barks," a bulletin prepared by Miss Alice Henkel, has been issued by the Department of Agriculture at Washington. It is a 60-page pamphlet, with 45 illustrations and contains very much that is interesting and instructive on the topic designated. Botanical and common names, habitat and range, description of tree or shrub and its bark, methods of collecting, prices and uses are given fully in each instance.

The fourth annual report of the "Superintendent for Suppressing the Gypsy and Brown-tail Moths" has been published by the Moth Department of the Massachusetts State Foresters' office. A large number of full-page illustrations are given, particularly interesting among which are those showing the new parasitic enemies of the moths and their methods of feeding on the caterpillars.

"Chrysanthemum Society of America: Proceedings of the Seventh Annual Meeting." This useful little publication gives the record of the meeting at Chicago, Nov. 7, 1908, list of varieties disseminated during the year and other information, fully demonstrating the valuable work this organization is doing and its right to the support of all who grow or sell the Golden Flower. A portrait of President Elmer D. Smith forms the frontispiece.

Which Spray Pump?

shall you buy? Buy the Spray Pump that fully meets the demands of the Government Agricultural Scientists and all practical Fruit Growers. These pumps are widely known as

DEMING SPRAYERS

and are made in 23 styles for use in small gardens or immense orchards. Write for our 1909 catalog with Spraying Chart. Add 4 cents postage and receive "Spraying for Profit," a useful guide book.

SPRAYED

A DESTRUCTIVE BORER.

Another pestiferous insect has invaded Boston Common and Public Gardens in the form of the Leopard Moth (*Zenzera Aesculi*.) The leopard moth larva penetrates the bark and alburnum, sometimes encircling the latter before pupating. I notice that in many cases pupation takes place at the entrance. The borings are emitted and can be seen at the base of the tree; that is, where the soil is freshened up around the tree. In the Dutch elms another indication of their presence is a small streak of sap emitting from the hole. The trees mostly infested are the sugar maples, ash, oak, American and Dutch elms. The latter are completely invaded, as can be seen along Lafayette Mall, and it is interesting to notice the injury caused by last year's larvae and the concealed methods of the present year. Its presence in a tree does not mean immediate death to the tree, but renders it dangerous to pedestrians where large trees are infested on public highways inasmuch as the limbs are weakened by the borings and by the interruption to the flow of sap.

It is very difficult to exterminate this insect on large trees, owing to its method of concealment; but in the younger trees they are more easily detected if, as I have already said, the soil is freshened around the base, so that the borings may be seen when they fall. The moth is white with black glossy spots, resembling the spots of a leopard, and these same designating marks together with a blackish segment next the head are to be seen on the larvae. Cutting and burning the limbs affected, treating the eggs on the bark of the trees or, where holes are observed, pouring into them some carbon bisulfide, and then plugging the hole with putty, soap, or something of a similar nature, or pushing a piece of strong wire into the hole and thereby killing the larvae are some of the remedies used.

RICHARD J. HAYDEN.

A LEAF MINER

(Coleophora Hemerobiella)

The Imperial Biological Institution for Agriculture and Forestry at Dahlem in reply to the editor of Moller's Deutsche Gartner Zeitung in regard to methods of combating this injurious insect on fruit trees, states that the treatment of the caterpillars by the application of poison, is made exceedingly difficult by the sack-like envelope that protects the creature. Still the spraying with petroleum emulsion mixed in the proportion of 1-9 of water has been proved of great use when applied at the unfolding of the leaves. As the insect as a rule forms burrows in the leaf and leaves the epidermis untouched, excepting at the point of entry, it is only in summer just at the time of the escape of the young caterpillars from the eggs that spraying is of much use. The application of arsenical mixtures for this purpose has to be carried out with a great deal of caution, in view of the dangerous effects of the poison on human beings and animals; and for this reason it cannot be recommended. The young

"Every Bug Has His Dose."

Insect-destroying preparations that do their work well and effectively are the cheapest. Bowker's Arsenate of Lead and Bowker's Pyrox are recognized standard insecticides and fungicides for both indoor and outdoor use. Bowker's Insect Emulsion destroys many kind of plant lice, black and green flies, etc. Call or send for catalogue.

Distinctive Greenhouses

To most people a greenhouse is just a greenhouse—a long, low, glass covered building, unimportant except for what it contains. They all look alike. But ours are made with a beauty of design and a conformity to their surroundings—it is just this, (next to utility), to which we devote great care.

This one we built at Chestnut Hill, Pa.—a simple, well designed, attractive layout, in every way practical. Steel frame construction.

Our circular shows numerous others just as attractive—send for it.

GERANIUMS

We want to impress it on the minds of the Florists throughout the country, that we are getting ready to furnish them with Geraniums next season. That we have an immense stock in splendid condition to propagate from; that we are confident we will be able to give you satisfaction in every way; that if you write us giving us an approximate number of what you will need, we will convince you that it is more to your advantage to buy good 2 in. stock, just when you need it, and just the kinds you want, then to propagate it yourself. In writing for Special prices don't forget to say how many you can use. You can save money by placing your order now.

SPECIAL. THIS WEEK WE OFFER AT \$3.00 PER 100, PREPAID

JEAN OBERLE, Bruant 1907, introduction, one of the most beautiful among that color known as Peach pink, an exquisite shade of Hydrangea Pink, shading tenderly to almost pure white at the outer edge of each petal. The florets are especially well formed, the trusses are actually immense, often having over a hundred florets to a truss, strong, vigorous, clean, healthy grower, free bloomer and stands the sun well.

We Stake Our Reputation on our Collections of 1000 in 20 varieties, our selection, at \$18.50 per 1000, 2 in., and \$25.00 per 1000, 3 in. An immense stock for immediate shipment.

THE SPECIAL CONVENTION NUMBER

In Honor of the

S. A. F. Twenty-Fifth Anniversary

At CINCINNATI

WILL BE ISSUED ON AUGUST 14

This will be an issue of exceptional interest and will be widely circulated and widely read. Its value as an advertising medium for all floral and horticultural material cannot be over estimated. S. A. F. trade is always worth a special effort at Convention time. Send your order in early and it will have our best attention.

The Significance of Cookson Formula

The increasing interest shown in this fertilizer by orchid growers and others means much to the student of the soluble fertilizer question. This and similar soluble compounds have been used by them for some years with success and in the only way possible to secure success—little and often or dilute-and-all-the-time—which corresponds exactly with Nature's best conditions although rarely met with.

The accurate control of fertilizer is no less important than that of light, heat or water. These factors of environment, except perhaps light, we may vary at will and we are making daily gains towards exactness in producing results by variation of these factors.

Orchid culture is a half-way house between ordinary soil and the historic "Water Culture" where first, primal questions of fertilizers were put to the test. Orchid roots being surrounded with but little material make a culture possible almost free from the complicated and uncertain factors introduced along with soil. Thus it comes about that when a soluble chemical is applied to orchids—with extreme dilution, remember—it is not changed before it gets to the root to any such extent as might well happen had it come in contact with or in fact been filtered through the soil as commonly occurs. The soil itself has chemical powers to change the character of fertilizers before they can get to the plant's roots.

It is refreshing to see the culture of plants beginning to approach the accuracy necessary in any other manufacturing enterprise. Cookson applied to plant culture the same care in use of chemicals he would have, had it been any other question of chemical technology. He chose a combination of chemicals which have no comparatively useless elements as soda, chlorine or sulphur, but which do contain in reasonable proportions the three elements we hear so much of, nitrogen, phosphoric acid and potash.

To be sure plants need a wee bit of several things which, however, they are extremely likely to get in the ordinary course of events through the water or somehow.

Cookson's Formula has nitrogen in both forms (neither organic) nitric and ammonia as exemplified respectively by the nitric part of nitrate of soda and the ammonia in sulphate of ammonia. It has phosphoric acid in combination with ammonia while the potash is linked with the nitric nitrogen.

The proportion of two parts ammonium phosphate to three of nitrate of potash would show over 12 per cent. nitrogen and double that of both phosphoric acid and potash.

Now what interests the student of chemistry as applied to horticulture is this—how soon are the so-called "practical men" going to swallow this proven theory of "dilute-solutions-only," and act accordingly? Many have done so, the late Dr. Cookson being a distinguished pioneer in this field.

Note the dilution. His formula as used by him gives the proportion in water of one to 80 thousand in the case of nitrogen while with phosphoric acid and potash the ratio is one part to 40 thousand. Many well and pond waters are as strong as this but never with as valuable fertilizers as this. In fact this does not occur in Nature and none but a soluble chemical of chosen constituents could be applied with the ease, accuracy and

extreme but certain dilution obtained with Cookson Formula.

Boston, Mass.

Some Points in Peony Growing

EFFECT OF SOIL AND CLIMATE

Soil and climate have much to do with these flowers. Location, even in the same neighborhood, plays an important part. Those in a protected position will often bloom profusely, while those exposed will not have a flower.

Just south of our house is a large clump of *Festiva maxima*. At blooming time I counted sixty-five blooms and large flower buds. Not many rods away where the plants of the same variety were exposed to the full sweep of the northwest wind it took three clumps to produce one flower.

There are some sorts which will bloom under all conditions. I note that *Grandiflora Rosea*, *Faust* and *Golden Harvest* always bloom—especially the latter, no matter where it is planted. It is a favorite in Manitoba.

I have just returned from our branch nursery at Paynesville, Minnesota, under the care of Frank Brown. When I visit that place where the peonies always bloom two weeks later than in this locality, I am ashamed of Nebraska. Up there, winter hangs on till spring and the plants escape the late freezes which nip the flowers in the bud. The cooler and moister air gives greater beauty to the bloom. For instance *Humei*, that late cinnamon scented pink, is being discarded in Illinois and Nebraska and other portions of the West as well as in some parts of the East, but up there it is one of the grandest flowers, and almost always carries off the prizes for pinks.

A CURE FOR GOUTY ROOT, THAT TERRIBLE FRENCH DISEASE

Once in awhile we will get caught in our importations. I once got a lot of *Humei Alba* from a Chicago firm. The roots of these disease plants are the most uncanny and repulsive things in the vegetable kingdom—all knotted and gnarled. No fibrous roots and the poor things can only live, and have no vitality for blooming. I once tried lye and made it so strong I killed one hundred roots; but I didn't mind that. Others I planted in slacked lime, that killed some and nearly cured others. By cutting off the diseased parts and planting in fresh soil, which never had been manured, they nearly recovered. I conceived the idea of sending a lot to Mr. Brown of Paynesville. I told Mr. Brown to plant them on the barest knoll without any covering, and see what 40 degrees below zero would do for them. He selected a gravel and clay soil which had never been manured, and last week I dug up some of them to see how they were getting along. The old roots were there as repulsive as ever, but outside of them new ones had been found clean and healthy and full of vigorous little rootlets, making a strong contrast to the old diseased ones, so that disease which has baffled every effort can be remedied by the cold air cure, just as consumption is often cured by a mountain climate.

York, Nebraska.

C. S. Hammon

Water Scenery in the Garden

(See Frontispiece)

AQUATIC PLANTS

First and foremost among plants suitable for cultivation in the water must be placed the hardy nymphæas whose flowers have beautiful shades of yellow, rose, carmine, and blue, like those of some of the tropical species. It is to M. Latour-Marliac, of Temple-sur-Lot, in France, that the merit is due of imparting these tints and graceful shapes to the hardy and more vigorous species of the temperate parts of the globe. With these new additions aquatic gardening bids fair to become a great feature in gardens furnished with suitable areas of water of the necessary depth, namely 1 1/2 to 3 feet. The planting may be performed in the months of May and June. The soil should be strong loam of good quality, slightly enriched with decayed ox dung, and placed in slight hillocks or in wire or willow hampers, and covered with a thin layer of small stones, in order to avoid its washing away, if there should be a current in the lake. I would recommend the following species and varieties: *Nymphæas Marliacea albida*, a fragrant, pearly white flower; *M. carnea*, of a pale flesh tint, with yellow stamens like the preceding; *M. chromatella*, straw color with orange stamens, fragrant, and a continuous flowerer during summer and autumn. Then there are *N. Marliacea flammea* with reddish purple flowers, *N. M. ignea*, deep crimson, *N. M. rubropunctata*, reddish mauve, the petals tipped with carmine. Another section consists of the *Laydekeri* varieties, viz., *N. L. fulgens*, deep crimson flushed with orange; *N. L. lilacina*, pale rose color; *N. L. prolifera*, pure rose; *N. L. purpurata*, bright rose-carmine with stamens of orange red; and *N. L. rosea*, pink tint, changing to rose pink as it ages. Of the British species *N. alba* there are two forms differing from the type, viz., *plenissima*, whose flowers are fuller, and pure white; and *rosea*, a rather rare, rose pink variety. *N. odorata* is the deliciously scented pure white North American water lily. There are several varieties of this fine lily, of which mention may be made of *Exquisita*, with rosy carmine flowers; *Gigantea*, whose flowers are white and many petalled; *Luciana*, with deep rose pink flowers; *rubra*, cup-shaped blooms of pink; *Paul Hariot*, *Seignouretii*, *Richardsonii*, a strong growing form of *N. tuberosa*, having white blooms thrown high above the surface of the water; and *N. Falconeri* with blooms of bright red, having a tinge of lake, and reddish leaves when young, but changing with age to green, the veins only remaining reddish.

To afford variety of form and color the following species may be planted in lakes of any extent, provided the water is of moderate depth; it being borne in mind that depths exceeding 5 feet in the summer season are unfavorable to growth. *Acorus calamus*, *Aponogeton distachyon*, *Butomus unbellatus*, *Caltha palustris* and its double flowered variety, *Cyperus alternifolius*, *Iris Pseudo-acorus*, *Menyanthes trifoliata*, *Polygonum amphibium*, *Sagittaria Japonica fl. pl.*, *Stratiotes aloides*, *Vallisneria spiralis*, etc. For these and indeed all aquatic plants, suitable sites near the banks should be chosen, and soil laid, and weighted down with a few flat stones,

and the richer the soil in reason the better the future growth will be. It may here be stated that some water lilies—especially native species—but more rarely hybrids, grow in course of time, with such luxuriance as to crowd out all other plants. This evil is much to be feared when species of reeds are planted in any quantity.

The smaller growing water lilies have a good effect when planted in such small basins as are found in the garden near to the house, which seldom exceed 30 feet in diameter, and in such receptacles there is no necessity to endeavor to heighten the effect by planting many of them. More agreeable are the impressions afforded by the formation of receptacles for plants in the outer wall of the basin and extending these outwards two or three feet. This kind of addition is easy of accomplishment at the time the basin is built, as well as subsequently. In these receptacles may be planted *Cannas*, small growing *Arundinaria* (Bamboos), *Bambusa palmata*, *Carex Japonica*, *Eulalia Japonica* and its varieties; *Funkia grandiflora*, *Gyncrium argenteum*, *Iris Kaempferi*, *I. ochroleuca*, *Osmunda regalis*, *Spiræa aruncus*, etc. The same species may likewise find a place on the shores or banks of large pieces of water; either singly or better still as clumps not too closely planted together. When placed around a basin, a few flowers should be added to afford coloring and contrasts, and to fall over the edges of the masonry. In such positions as this the following species may be put to effective uses, in the warmer months. *Fuchsias*, *Gladioli* of species, *Iris* of many kinds, *Montbretias*, *Ixias*, *Tigridias*, *Lilies*, tuberous rooted *Begonias*, *Incarvillea Delavayi*, *Myosotis*, *Lobelia erinus* in variety, *L. cardinalis*, *Clematis aethusifolia*, flowering in September and October; *C. coccinea* Countess of Onslow, Duchess of Albany, Duchess of York, Grace Darling and Sir Trevor Lawrence—five of the progeny of the American species *C. coccinea* crossed with the Star of India an old hybrid. The plants are hardy and free flowering. Any of the annual summer climbing plants as *Lophospermum*, *Maurandya*, etc., may be planted at the margins.

Fredrick Moore

British Horticulture

THE "WHITE CITY" GARDENS

The wet, unsettled weather which has characterized the early part of the summer has not been very favorable to the Imperial International Exhibition which is being held at the "Great White City" at Shepherd's Bush. In spite of the climatic shortcomings the gardens, which form a large portion of the city's 150 acres, have presented a very bright and attractive aspect. By the art of the landscape gardener what was at one time an unsightly piece of waste ground has been completely transformed. The effectiveness of the design has been enhanced by the formation of a number of lagoons, with grassy banks and islands. A specially made mower, with an unusually long handle is employed to keep the grass in order. The lawns, most of which have been produced from grass seed, have materially improved as the result of another year's growth, and their splendid appearance has been the subject of general admiration. This year the Exhibition authorities have laid out a sub-

stantial sum of money in the preparation of the beds in the central part—the Court of Arts. Many thousands of pelargoniums have made a brilliant display, the varieties chiefly used being Paul Crampel, Jacoby, Denmark, Raspail, etc. Nothing very original, however, in the way of design has been attempted, the object apparently being to furnish an abundance of gay parterres. For originality we must evidently wait for next year, when the enterprising Japs are coming over to the "White City"—in order to demonstrate to Westerners the advance they have made in arts, sciences, and inventions.

SOME TRADE EXHIBITS

A popular feature in the gardens last month was the grand display of rhododendrons made by Messrs. Waterer and Sons, of the American Nurseries, Bagshot, who worthily upheld the high reputation they have attained in this special line. In the Elite Gardens, which are bordered by artistically designed buildings, there is a meritorious array of roses planted by G. Paul and Son. Polyanthas, such as Lady Gay, Godiva, Goldfinch, and Waltham Bride, occupy prominent positions in the various beds, surrounded by a fine selection of the leading varieties of the "Queen of flowers." Close at hand Messrs. Lane and Sons make an excellent show with some well arranged dwarf conifers and ornamental shrubs. A similar display is made by the Harrow Nursery Co. Kelway and Sons make a special feature of pyrethrums, peonies and gaillardias. An interesting collection of begonias from the nursery of John Laing and Sons is seen in the beds fronting the garden club. A batch of dahlias planted by Toogood and Sons are making satisfactory progress, the varieties including Daisy, Bruce, Gazelle, Hyacinth, Victoria, Mercury, Rev. D. R. Williamson and Harold Peerman. Contrary to expectations, it is not intended to hold any flower shows at the exhibition this season. Last year some attractive shows were held, at which the leading members of the nursery trade in Britain and France were well represented, and the proceedings were of an international character. Possibly all efforts in this direction are being kept in reserve for next year, when the exhibition is to receive the official support of the Japanese Government.

SOME NEW ROSES

At the National Rose Society's show on July 2nd, some choice novelties were to be seen. As usual, the Irish firms were well to the fore in this direction. In the class for new roses offered by the trade for the first time in 1906, Messrs. Hugh Dickson, of Belfast, were first. Their exhibits included Miss Cynthia Ford (salmon pink), W. R. Smith (creamy white), and the Lyon rose. In the seedling competition, the same firm secured a gold medal for Countess of Shaftesbury. This is of a rich cerise pink hue, with an outer shading of silvery pink. Lady Pirrie was also another gold medal seedling, this being similar in tint to the Lyon rose (coral red, tinted chrome yellow). Muriel Johnson, of an apricot shade, received a card of commendation. Other seedlings shown were Mrs. Herbert Stevens, creamy white; Thelma, a single flowered Wichuraiana of a deep red color; Climbing Lady Ashtown, deep pink; Monaghan, a rich crimson single. The championship in the nursery classes this year was carried off by A. Dickson & Sons, Newtownards, Ireland. In the trade section a silver medal was awarded to the following varieties as being the best of their class in the show: A. K. Williams, H. P., shown by A. Dickson & Sons; Mdme. Melaine Soupert, H. T., shown by S. McGreevy

& Sons, Portadown, Ireland; Mrs. Edward Mawley, T., shown by H. Drew, of Oxford. The quality of the exhibits was not up to the usual standard, the unfavorable weather having had a prejudicial effect on the blooms.

W. H. Gidsett.

Notes from the Arnold Arboretum

Among the new Chinese plants there are many beautiful climbing shrubs and some of them with strikingly variegated leaves such as we see in some stove plants as *Cissus discolor* and others, but not in any of our hardy vines. One of the most noteworthy is *Pseuder Henryana* (*Vitis Henryana*) which very closely resembles in shape of its foliage our native Virginia Creeper and possesses like that species and the Boston Ivy the property to cling to walls and trees with disk-bearing tendrils. Its leaves are in shape exactly like those of the Virginia Creeper, but are bright purple when unfolding, turning later to purple and finally into ruddy bronze, on their upper side, with beautiful silvery marking along the midrib and partly along the veins, while the under side keeps the purple color. The hardiness of this vine has not yet been tried here, but in England it is considered hardy and it is even said to be quite hardy in northern Germany, so that we may hope it will be fairly hardy here. It will certainly rank among the horticulturally most valuable new plants from China.

There are also several new Chinese *Clematis* with prettily variegated foliage, but we know as yet very little about their correct names, as they have not yet flowered, and nothing about their hardiness.

Another new vine with beautiful foliage is *Actinidia chinensis*. Of this genus we already possess two species, viz., *A. Kolomikta* and *A. polygama* of which, particularly in the staminate plant, the foliage is strikingly colored, their leaves assuming partly a silvery white color, in the first species tinged with pink. In *Actinidia chinensis* the foliage is very handsome in a young state when the leaves are densely covered like the stems with bright red hairs, later the upper side becomes almost glabrous and dull green and the under side is covered with a grayish white pubescence; in outline they are almost round and measure four to five inches in diameter. The flowers which appear at the base of the young shoots and on short branchlets of last year's growth are cup-shaped, nearly one and a half inch broad and bright yellow and followed by edible fruits about the size of walnuts with a flavor resembling ripe gooseberries. It is to be regretted that at the Arboretum this species has not proved hardy, having been killed to the ground during the winter, but vigorous young shoots have sprung up again from the base and show the beautiful foliage. Another *Actinidia* from China not yet named has the young leaves purplish and beautifully marked almost like those of *Cissus discolor* which they also resemble in shape. It has not yet been tried in regard to its hardiness.

John Thorpe "Uncle John" as many affectionately called him—has joined as we knew him the great majority. Nevermore shall we see his well-known figure in the flower exhibition halls or listen to his shrewd counsel and sanguine forecast of the future triumphs of his favorites. Flower shows were John Thorpe's centre of gravity and when one was within his reach he fairly haunted it from beginning to close with an idolizing

devotion which knew neither hunger nor fatigue. Contrary to the rule with most men when past the meridian of life, retrospect and reminiscence had very little part in John Thorpe's make-up. He was forever looking to the future rather than to the past and no adverse conditions or discouragement could down this optimistic trait which enabled him to view with imperturbable serenity emergencies and consequences which would utterly disconcert an ordinary man.

Who could help loving John Thorpe? In forming a just estimate of the man the scale of points applicable in judging the rest of humanity is almost valueless. In things small or great he was original and inimitable always. In matters horticultural he was an enthusiast and a genius. In his contact with his fellowman a rare magnetic influence was his and all who came under its radiance, whatever their social or intellectual position in life, became oblivious to all those external marks by which we are all too ready to measure one another and, greedily drinking in the inspiration of his buoyant enthusiasm and captivated by the intensity of his love for everything connected with plants and flowers, perceived only the lustre of his great mind, the sway of his choice and master spirit which no privation could conquer.

"Were I so tall to reach the pole,
Or grasp the ocean with my span,
I must be measured by my soul:
The mind's the standard of the man."

Rest in peace, dear old John Thorpe! In American horticulture your memory will be forever green.

The Rural New Yorker's "set to" with Luther Burbank over the identity of his "Wonderberry" will be watched with keen interest by the horticultural world.

The horticultural trade as a whole glories in the achievements of its geniuses and always has done so. It respects and honors the man who gives us a Seckel pear, a Concord grape, an Early Rose potato, a Maryland rose, or an Enchantress carnation. It has a right to resent and unhesitatingly condemn anything that savors of faking or deception, or in any way tends to bring dishonor and humiliation to the profession. For a quarter of a century the Society of American Florists has raised its voice repeatedly in favor of the highest standard of ethics and morality in such matters, and today the trade insists upon and the public demand a clean bill with whatever is pushed forward as a sensational novelty. On Saturday, July 17, 1909, "Luther Burbank's Wonderberry," in plant form and fruit, was displayed upon the exhibition tables of the Massachusetts Horticultural Society, marked "Worthless," and this fact was duly proclaimed in the Boston dailies, together with a statement of the poisoning of two Italians who had eaten of the fruit. The public have been so industriously drilled into the idea of the wizard's marvelous powers that in the popular frame of mind up to date it will buy anything bearing Burbank's name, so it is desirable that the true character of such introductions, untested except possibly for a short time in California, should be ascertained and given the widest publicity. HORTICULTURE has no bias in the present instance, our only desire being to see Truth prevail and now that the bout is started we hope the light will be fully turned on and the matter thoroughly sifted until facts either vindicating Mr. Burbank or justifying the Rural New Yorker are conclusively shown. From what we know of Editor Collingwood's ways we have no doubt he'll hang on all right and there's plenty of fun ahead, if we are not greatly mistaken.

TWO NEW CLIMBING ROSES.

We have pleasure in presenting illustrations of two new climbing roses, Dr. W. Van Fleet and Silver Moon. Messrs. Peter Henderson & Co., the introducers, write as follows: "These varieties will, we believe, mark an epoch in hardy climbing roses. The first is now in its ninth year and has stood the winters at Little Silver, N. J., without injury. The second is in its fourth year and has also stood the winters there perfectly. We append descriptions.

"Dr. W. Van Fleet (Sourv. de Pres Carrot x Rosa Wichuraiana). The open flowers run four inches and over in diameter, center built high, petals beautifully undulated and cupped. The color is a remarkably delicate shade of flesh pink on the outer surface, deepening to rosy flesh in the center. Flowers full and double, buds pointed, stems 12 to 18 inches and fine for cutting; delicate perfume. The foliage is a peculiar shade of bronze green, large and glossy, spines a bright bronze red. A vigorous grower and immune from mildew.

"Silver Moon (Rosa Wichuraiana x Rosa Sinica or Cherokee Rose). This is a most interesting cross. The flowers run four and one-half inches and over in diameter, clear silvery white in color, petals of great substance and beautifully cupped. The center is filled with bright yellow stamens, a very attractive feature. It is very floriferous, the plants literally covering themselves with the great clematis-like flowers. They are borne on strong stems, twelve to eighteen inches long and are delicately fragrant. The foliage is large and abundant, a pleasing shade of bronze-green and glossy. Vig-

NEW ROSE SILVER MOON

orous grower and immune from mildew."

Both these roses were awarded a silver medal at the rose show in New York, 1908, by the Horticultural Society of New York. They will be offered for sale in 1910.

ROSES W. VAN FLEET AND MAY QUEEN

WASHINGTON (D. C.) NOTES.

A severe wind and rain storm visited portions of the District of Columbia on July 16, and more than 500 fine shade trees were victims to its fury.

Much interest is being aroused in the second automobile flower parade, which will be held here about September 30th. The Chamber of Commerce is getting it up and it is thought that there will be a great many more entries than in the last one. It is proposed to have the cars decorated with natural autumn flowers.

NEWS NOTES.

A white sport from Dorothy Perkins' rose has appeared and promises to be one of the bright novelties of the near future.

The diminutive cactus plants in 1-in. pots advertised as "Cobweb plants" in our Buyers' Directory ought to sell by the hundred thousand at the pleasure resorts this season.

The Boston Journal has set aside July 27 as Flower Day. Receiving stations will be arranged at the terminals of the Elevated and steam railroads for flowers brought in by suburbanites, and these will be open until noon. The donations will be distributed as rapidly as possible among the children in the poorer sections of the city.

Obituary.

John Thorpe.

John Thorpe, father of the Society of American Florists and its first president, Chief of Floriculture at the World's Columbian Exposition and one of the best informed plantmen in America, died at his home in Chicago on Thursday, July 15.

Mr. Thorpe was born at Keyham, Leicestershire, England, April 3, 1841, and came of a family of horticulturists. At the age of 11 he was apprenticed to his uncle. After serving his term he took charge of the large estate of his cousin John Turner of Little Thorpe and while there was married in 1862 to Miss Clara Soar on Christmas day. He then went to Bristol and became a market gardener. In 1868 he moved his business to Stratford-on-Avon, and controlled extensive nurseries. In 1874, wishing a wider field for his labors, he came to America to take charge of Gordon park, Cleveland, O. He moved to Queens, L. I., where he became a partner in the firm of V. H. Hallock, Son & Thorpe. In 1888 he went to Pearl River, N. Y., in business for himself. In 1891 he was appointed Chief of Floriculture at Chicago and since that time has been a resident of Chicago. Four children and seven grandchildren survive him.

John Thorpe had a profound knowledge of plant physiology, was blessed with an inborn love for the beautiful, had keen perceptive faculties and followed up his work with patient industry, all of which qualifications brought forth good fruit as a result of his efforts in cross-fertilization while at Cleveland, Queens and Pearl River. His special subjects were zonal pelargoniums, gladioli, carnations and chrysanthemums. At one time the firm of Hallock, Son & Thorpe may be said to have ranked first in the country in the origination of new varieties of the above-named subjects and there was scarcely a catalogue in either America or Europe that did not list some of their productions.

During the period between 1881 and 1889, Mr. Thorpe introduced to the trade between twenty-five and thirty carnations under name. Practically all of these have shared the fate of all other introductions of that time, but they surpassed any that had been produced up to that time and it is only necessary to mention Portia and Mrs. Ferdinand Mangold to show the position some of these attained in the trade. In the years immediately following, his work in fertilization was concentrated on the chrysanthemum of which he was, up to 1892, one of the ablest advocates. Many of his seedlings were of advanced type and at one exhibition of the New York Horticultural Society (1884), Mr. Thorpe received 24 first-class certificates of merit for an equal number of distinct varieties of chrysanthemums.

The appointment to the position of Chief of Floriculture at the World's Fair marked the close of Mr. Thorpe's activities in hybridization and plant improvement. During the excitement and turmoil of that memorable time he was "Uncle John" to everybody and became a character of almost national

celebrity. Within the past four years contributions from his pen have appeared in HORTICULTURE from time to time, all giving evidence that his love for the avocation in which the best years of his life had been spent had not grown cold.

John Thorpe repeatedly asserted that at Cleveland, six or seven years before the S. A. F. was organized, he had advocated the forming of such a body. That he was recognized as justly entitled to a large share of the credit for the inception of the idea which took practical form at a meeting in the Sherman House, Chicago, in 1884, is indicated in the following extract from the report of the committee on final resolutions at the Philadelphia Convention in 1886, signed by Peter Henderson, John H. Taylor and Wm. J. Stewart:

Resolved, That, knowing that the Society of American Florists, now a solid success, was the inception of its retiring president—Mr. John Thorpe—who, in despite of great opposition from many members of the Nurserymen's and Seedsmen's Association, determinedly sowed the seed

JOHN THORPE

that has now become such a fruitful tree, he deserves in the highest degree our most hearty thanks, for the time so generously given, and the great ability so markedly displayed in bringing the work to such a high measure of success.

An insight into Mr. Thorpe's heart may be gained by a perusal of the following extract from his opening address as president before the Society of American Florists at its first Convention in Cincinnati, 1885:

"Of all the beauties there are to be found in nature, flowers stand pre-eminently first. They evidently are intended by the Creator to be companions of the human family. The man or woman is not born who does not inherently love flowers. It is only those who have unfortunately been denied the opportunity of ever seeing flowers that do not love them.

"Florists are among the best educators in the country. They teach by example, as well as precept, all that is good and true; they will mould the character of generations to come; they help those afflicted with sickness, and make the long hours of pain more endurable. They teach also that with even all the buffeting of life, there is really something worth living for, and that, withal, the beauties of nature are ever truthful, full of inspiration, and prompt us all to do that which is right."

For a few lines on John Thorpe as

we knew him see editorial on page 104 of this issue.

C. W. Smith.

Charles W. Smith, traveling salesman for the past twelve years for the Leonard Seed Co., Chicago, while swimming in the rear of the Chicago Beach Hotel on July 18 was drowned in full view of crowds of people, and at this writing his body had not been recovered.

Mr. Smith had just returned from a business trip and intended to start out again at once. With his brother Albert he was spending the morning at the lake front. He had been in the water but a few minutes and it is thought cramps must have seized him. To his many friends in the trade this will come as a great shock. Mr. Smith was 33 years old and unmarried.

Herbert Heller.

Herbert Heller died at his home in New Castle, Ind., on July 9 in his thirty-ninth year. His name has become familiar to the trade through his success as a rose grower, and as an exhibitor at the large flower shows his firm, The South Park Floral Co., has secured many prizes. Mr. Heller was a genial, whole-souled man; he was a member of the S. A. F. and numerous other trade societies. A wife and infant son constituted his immediate family. A brother, Myer, was associated with him in the business which will be continued.

Otto C. Lenz.

Otto C. Lenz, a native of Germany, died at his home in Providence, R. I., on July 10. For the past twenty-five years he has been devoted to horticulture and his large greenhouse contained many rare specimens. A widow, three sons and five daughters survive him.

NEWS NOTES.

Albany, N. Y.—John J. Berberick, florist, is increasing his floor space and will have two large show windows.

Rochdale, Mass.—The Maple Ridge Greenhouses are being thoroughly remodeled to meet the extended business which the proprietors are arranging for.

Denver, Col.—The Denver Wholesale Florists' Co. will open a wholesale cut flower commission and supply business at 1433 and 1435 California street on Sept. 1.

New York.—Charles Millang, the wholesale florist, will hereafter be located only at 55 and 57 West 26th street, having discontinued his store at 444 Sixth avenue.

Bar Harbor, Me.—Among the many improvements at the Mt. Desert Nurseries is the installation of an automatic sprinkling system, which will include about 12,000 feet of pipe when completed.

Lockport, N. Y.—D. McCarthy & Son have completed their new rose house and are about through with planting. This is their first attempt at rose growing. This firm has produced some of the finest stock of carnations in the past few years.

NEWS OF THE CLUBS AND SOCIETIES

MASSACHUSETTS HORTICULTURAL SOCIETY.

The annual sweet pea exhibition at Boston, always a beautiful and popular show took place on Saturday and Sunday, July 17 and 18 and was in all respects a worthy successor to the many fine displays recorded in previous years.

The sweet peas occupied a goodly proportion of the hall space and were in quantity and quality well worth a long journey to inspect. The "Spencer" sensations were all there and the exhibitors, as a rule, deserved credit for their admirable arrangement of colors.

Among the leading exhibitors were Giraud Foster, gardener Ed. Jenkins, whose flowers were superb in size and finish and to whom honorable mention was given for Mrs. George Higginson, Jr., lavender, and Countess of Northbrook, pink; Mrs. F. S. Dehue; T. D. Hatfield, all Spencers; W. J. Clemens; W. A. Riggs, beautifully arranged with long stems and sprays of foliage; Francis Skinner, brilliant colored varieties predominating; Morton F. Plant, a very extensive collection; Langwater Gardens, 12 large vases; Wm. Whitman, 100 vases, unnamed, mixed.

No description can do full justice to the extensive array of summer garden flowers, arranged with consummate taste with rock border and clumps of osmundas and other wild ferns, from R. & J. Farquhar & Co. From the same exhibitors came two immense groups of Japan iris in glorious profusion and a display of amaryllis grown outdoors. The Bellevue Nurseries also staged a rich collection of hardy herbaceous material as did also Old Town Nurseries and F. J. Rea.

Mrs. J. L. Gardner was represented by some elegant specialties among which *Francoa ramosa* stood forth as a suggestion for general use as a florists' flower. Its graceful sprays of pretty white flowers should appeal to every artistic flower worker. The new *Hydrangea arborescens grandiflora* was shown by Mrs. E. M. Gill and F. J. Rea. Wm. Riggs got honorable mention for a superb seedling delphinium colossal in size of flower spike and dazzling in its tints of purple and blue. *Browallia speciosa* major from Walter Hunnewell attracted attention as a lovely pot plant.

The vegetables and fruit were simply gilt-edged. A silver medal went to Thos. E. Proctor, gardener James Marlborough, for a display of fruit grown under glass including figs, peaches, nectarines, apples, pears and plums, part of the exhibit being shown growing on little trees in 12 in. pots. "Wonderberry," the reputed child of Luther Burbank and protege of John Lewis Childs, was shown in plant form and basket of fruit, labelled "Appears to be identical with *Solanum nigrum*—Worthless."

SOCIETY OF AMERICAN FLORISTS AND ORNAMENTAL HORTICULTURISTS.

Registration of Rose.

Mr. Wilmer W. Hoopes, of Hoopes Bros. & Thomas Company, West Chester, Pa., offers for registration the following rose:

Name—"Climbing American Beauty."

Parentage—An unnamed seedling crossed by American Beauty.

Growth—Of strong climbing habit, making shoots of 10 to 12 feet in a season. The foliage is a rich dark green, free of mildew or black spot. Color and form of flower is similar to its pollen parent, American Beauty, 4 to 5 inches in diameter. It blooms very profusely in June and occasionally all during the summer. The plant is hardy, having withstood a temperature of 5 degrees below zero without injuring even the tips of the shoots.

The application for this registration having been submitted to the American Rose Society and not having been objected to by them, the registration is completed under the rules of this society. W. N. RUDD, Secretary.

MINNESOTA STATE FLORISTS' ASSOCIATION.

The picnic of this association took place on July 15 at Big Island on Lake Minnetonka. The day was ideal; the two-hours' boat ride was especially enjoyed; nearly five hundred people were in attendance, and the program was carried out to the satisfaction of everybody. In the ladies' race, Anna Michaelson was 1st, Bernice Cole 2nd, Agnes Anderson 3rd. In the men's race, J. White, Harry Slater and Harry Dysinger, won in order named. In the tug of war St. Paul won the box of cigars; they also won in the ball game, seven innings were played, score 12 to 10. Helen Grelley was the prize-winning lady waltzer; H. E. Geyer won the gentlemen's prize. The children had their share of the sports and enjoyed them to the limit, boys', girls' and children's races being listed. The bowling is booked for July 23 at Pfister's alleys, St. Paul, the contest to be in individual teams and ladies' bowling.

NASSAU COUNTY HORTICULTURAL SOCIETY.

The regular meeting of the society was held at Pembroke Hall, Glen Cove, on July 14, with a good attendance. President Everett occupied the chair. The secretary read several communications offering special prizes for the Fall Show. Judges for the month were Messrs. Johnston, Duthrie and Garrett. Awards in the points competition were: V. Cleres, 85, for vase of poppies; P. Reul, 82, for sweet peas; H. Gaut, 78 1-4, for antirrhinums; G. Wilson, 75, for fuchsias. G. Wilson, P. Reul and G. Ashworth were each awarded a cultural certificate for sweet peas. J. Brombosky for *Platycodon* and *Stokesia cyanea*, V. Cleres for sweet peas, and S. J. Trepas for cucumbers received honorable mention.

The society will join the Tarrytown Horticultural Society on their outing to Rye Beach on August 11.

WM. MACKENZIE, Sec.

JOINT MEETING AT NEW ORLEANS.

Southern Florists' Association Disbands.

The Southern Florists' Association was disbanded at the annual meeting held on July 15 in the clubhouse at Milneburg, over the wind-swept waters of Lake Pontchartrain. The end came after a long but futile fight to stimulate interest among florists of the South. A number of members of the association joined the ranks of the New Orleans Horticultural Society.

The association was organized a little more than four years ago, and for a time the florists of the South took an active interest in its affairs. In the past two years interest has been found lacking.

From the failure of the Florists' Association the New Orleans Horticultural Society gains strength. The meeting of the Southern Florists and the Horticultural Society were held at the same time and place.

The session of the Horticultural Society was fraught with interest. The principal event was the election of officers to serve during the coming year. The following officers were elected: A. Alost, president; Herman Doescher, vice-president; C. R. Panter, secretary, and John Eblen, treasurer. Richard Eichling, one of the popular members of the society, was nominated for the vice-presidency, but he declined, and retired in favor of Mr. Doescher. Secretary Panter, who was re-elected, will enter upon his sixth term. He has done a great deal in the interest of the association, and the members are wideawake to his value as an officer. J. Eblen has served in the capacity of treasurer for twenty-four years, and has never been found wanting. He is also numbered among those active members who are always doing something for the society.

There were a number of interesting reports read by the officers, showing that the society is enjoying success and that its treasury is in a healthy condition.

After the meeting adjourned the members of both societies marched to Moreau's restaurant, near the end of the long pier, where a sumptuous fish dinner was awaiting them. The spirit of conviviality predominated. There were bright speeches by the retiring officers and some of the invited guests. The officers elected at the meeting were also heard from. There were other short talks and stories by Ed Baker, J. A. Newsham, Richard Steckler, C. W. Eichling, Charles Eble, H. Papworth. On behalf of the retiring officers, H. Sherman made a brief address.

The outing was one of the most successful ever given by the society. The committee was composed of Messrs. C. R. Panter, chairman; Henry Cook and Paul Abele.

Quite a delegation from this society will be in attendance at the Cincinnati convention of the S. A. F.

ROYAL HORTICULTURAL SOCIETY.

The summer horticultural show of the R. H. S. which took place on July 6 and 7 was as usual well attended by private cultivators of plants and by the principal nurserymen of the southern parts of England and a few from Ireland and Scotland. The visitors were numerous and the exhibits exceedingly interesting to horticulturists of all grades. It is my purpose in the present letter to briefly touch upon the novelties observed among the plants and cut flowers, these being always of the most interest to people at a distance. Taking those shown from Scotland first, I would direct attention to fine varieties of pentstemons, derived from *P. gentianoides*, a Mexican species, hybridized, according to some authors, with *P. Cobaea* and *P. Hartwegii*. The flowers of the best varieties excel the *gesneras* in the brilliancy of their colors and freedom of flowering. Mr. J. Forbes, who for many years has paid attention to the raising of new varieties, showed over 100 varieties.

Orchids were shown as plants in very large numbers. Messrs. Stuart Low & Co., Bush Hill Park Nursery, Enfield, exhibited *Cattleya Schilleriana*; *C. Hardyana*, with a lip of a beautiful purple color striped with orange; the other parts of the flower of a rosy buff tint; *C. Mollis*, a cross of *C. Gaskelliana* and *C. superbiens*; *Cattleya Canhamiana alba*; *Laelio-Cattleya Lustre*, a cross between a variety of *C. speciosissima* and *L. Callistoglossa*; *L. C. fulvescens*, a cross between *Laelia Forbesii* and *C. aurea*, a striking flower having a large conspicuous lip. From the gardens of Mr. Menteith Ogilvie came, besides many other superb orchids, some new *Odontodas*, viz.: *Charlesworth* and *Bradshawia*; *Odontoglossum Pescatoris* var. *luteum*, having lemon colored blooms on short spikes, the former spotted with crimson at the back. F. Sander & Sons, St. Albans, showed *Cattleya Mossiae Reineckiana amabile*, a flower having sepals, petals and exterior of the tube white, and lip of a rich color streaked with orange and purple; *Cattleya Mrs. Myra Peeters*, a cross between *C. Gaskelliana alba* and *C. Warneri alba*; the flower pure white, excepting the lower half of the throat, which is pale yellow. *Laelio-Cattleya Martinetii* possesses sepals and petals of buff tinted crimson; lip and tube purple. A variety of the above named, "The Prince" is a higher colored flower. A first-class certificate was awarded this variety. Messrs. Sander showed a *Cypripedium gigas* Corndean variety, with immensely large blooms and petals $2\frac{1}{2}$ feet in height; and a plant *Aerides Houletiana*, a white and lemon yellow bloom, the sole representative shown of a once favorite species. Messrs. Charlesworth & Co. were the exhibitors of a bigeneric hybrid-Miltoniada *Harwoodii*, the result of a cross of *Miltonia vexillaria* with *Cochlidia Noezliana*. The plant carried one flower about two inches in length, and having sepals and petals of a cherry-red tint and a lip bearing resemblance to that of a *Miltonia cuneata*, milk white, with pink markings.

Messrs. Wm. Paul & Son, Stuart Low & Co., Hobbies, Ltd., and the Dicksons were all represented by

RHODODENDRONS, ANDROMEDAS, KALMIAS AND SPECIMEN EVERGREENS

JOHN WATERER & SONS, Ltd.

large groups of roses. Carnations of both sections were finely shown by J. Veitch & Sons.

Sweet peas were plentifully exhibited. The novelties most noticeable for coloring and size were of the Spencer type shown by Messrs. Jarman & Co., particularly the varieties Mrs. Townsend, a flower of a white ground, with violet edges; Ida Townsend, large, deep mauve; Mildred Townsend, an improved America; and Mrs. Cawthorn, very large flowers of a pale blush tint. Mr. Chaplin of the Joynings Nursery showed blooms of a pure yellow sweet pea, not yet in commerce.

Messrs. J. Veitch & Sons showed their tuberous rooted *Begonia Washington*, a variety of neat, compact growth, having trusses of bright scarlet blooms. $2\frac{1}{2}$ inches in diameter, very double and abundantly produced. This firm likewise showed bedding *Pelargonium Snow Queen*, a dwarf-growing variety with trusses of white blooms and white variegated leaves, and an acquisition for either outdoor or indoor decoration. The firm showed a large number of the new improved strain of *gloxineas* with a half-drooping pose in the blooms, and some standard fuchsias with straight stems about 4 ft. in height and umbrella-shaped heads covered with flowers.

Messrs. Blackmore & Langden made splendid show of tuberous rooted *Begonias* with large frilled, single and semi-double flowers, which have great decorative value for greenhouse work. Perennial herbaceous *Delphiniums* with white and lemon colored flowers, a new departure, were shown by Messrs. G. Bunyard & Co. *Ampelopsis Lowii*, a creeper, the foliage of which in the autumn has pretty coloring, and *Bougainvillea W. K. Harris* with green and white variegated leaves, were shown by Messrs. Stuart Low & Co., Ltd., as were likewise some ripe fruits of the Lowberry (*Blackberry* x *Raspberry*), and the Branble, Phenomenal (*Raspberry* x *Loganberry*), both large fruited novelties, good for the dessert and preserving.

F. W. Bruggerhof, Pres.; Burnet Landreth, Sec'y.

The National Organization of Seed Analysts: Its Purpose and Scope.

A paper read by E. H. Jenkins, President of the Association, before the American Seed Trade Association.

On December 31, 1908, representatives from sixteen of the states, from Canada and from the United States Department of Agriculture, met in Washington, D. C., and after discussion, formed the Association of Official Seed Analysts.

While no formal declaration of purposes was put on record, the discussion indicated two objects for the work of this body: first, to improve and unify the present methods of seed testing and, second, to work for more uniform and satisfactory laws regulating the sale of agricultural seeds.

In brief, our aim regarding methods of seed testing is to get uniform and accurate methods and manipulation in all seed-testing laboratories for fixing the purity and vitality of commercial seeds. Seed-testing is no new thing with the Agricultural Stations in this country. More or less of it has been done at the Connecticut Agricultural Station for more than thirty years, and quite as much of it in the interest of seed growers and dealers, as directly for buyers of seeds. Other stations have also engaged in such work.

But this kind of work is now being forced upon the attention of all the agricultural stations of the country by the logic of events and from the side of the retail purchaser. It follows as a consequence of other kinds of control work which state institutions are doing. For example, fertilizers are now sold only under a guaranty of composition; they are officially tested, and, if they fail to meet their guaranties, the buyer has some redress, or the seller is more or less injured in his business reputation. The same is true, in a way, of cattle feeds, food products, and of drugs.

It is plain that clean seed, true to name and of good germinating power, is more essential to the grower than standard fertilizers. He has seen his mowings seeded with pestilent weeds. He has seen his clover fields overrun with dodder and, in some cases, growing almost as much yellow trefoil as clover. He has sown "orchard grass" and got chess in part, and while these utter disasters may not be very common, almost every farmer's own experience teaches him that he is not sure of getting good seed and that bad seed may do more serious and lasting damage than poor fertilizers. But the seller offers him no assurance of any kind regarding his seed. He reads on his packages: "While we exercise the greatest care to have all seeds pure

and reliable, they are sold without guaranty and without any responsibility, express or implied, in respect to the crop." Neither regarding the purity, nor the vitality, nor the genuineness of the goods he sells will the dealer take any responsibility. This is "caveat emptor" with a vengeance! The farmer's crops are his livelihood, but for his seed no one will be in any degree responsible!

Naturally, with his experience regarding fertilizers, cattle feeds and human food products, he turns to the stations. His only protection at present is to have the quality of the seed which is offered to him fixed, so far as may be, by some impartial and competent person, so that he may avoid what can be clearly proved to be inferior by laboratory tests, and thus in some degree protect himself. Perfect protection he cannot get in this way. At present, for instance, no one can surely distinguish for him the seeds of many agricultural varieties or strains of the same species. Nor can it be determined in advance whether a given lot of seed will yield strong, healthy plants, or weaklings that can germinate but not withstand the accidents of growth in field culture. But it can be certainly determined in almost all cases whether the seed in question is of the species named on the label, whether it is relatively light or heavy seed, what percentage of foreign matter it contains, what proportion of weed seeds and of what kinds, and how much of the pure seed is capable of germinating under

the most favorable conditions. These determinations are obviously of the greatest value to the buyer.

This work, as I have said, is forced on some of us by the state of the trade, the disasters of farmers and their calls for assistance. We must meet the demand and we must meet it with skill and experience, with accuracy and uniformity of method and results. A leading purpose of our Association is to secure these things by co-operation in study of the methods. I may make this clearer from our experience in the examination of fertilizers. Twenty-five years ago there was organized the Association of Official Agricultural Chemists, for the purpose of securing this accuracy and uniformity in the analysis of commercial fertilizers. At that time chemists were following different methods, some of them quite faulty, and in consequence

Mum Canes

What you want now

7 to 8 ft. \$7.00 1000

Wm. Elliott & Sons
42 Vesey St., New York

their results were often discordant and wrought much confusion in the trade. That Association, at first quite small, now includes most of the official agricultural chemists of the country; it considers all methods for the analysis of fertilizers, feeds, food products and drugs; each year its members do a large amount of co-operative investigation work, they compare their work from time to time by the testing of identical samples and, as a result, the work of official chemists in different sections of the country yields much more uniform and consistent results than it did before and commands the confidence of the trade.

Now we propose the same kind of work for the official seed analysts. We shall, I hope, study the methods of sampling seeds, for my experience of more than thirty years convinces me that correct sampling of any material is as important and as difficult as—often much more difficult—than the work of analysis. To illustrate: Some time since, a considerable quantity of carrot seed, of which we found over 70 per cent germinated and which was sold on that guaranty, was refused by the purchaser, who found under 40 per cent germination. On going into the matter, it appeared that the purchaser's sample was taken from the top of the package and contained, in consequence, the lightest seed in it. A sample taken after careful mixture of the whole contents gave a test differing little from our own.

We are studying the whole matter of germination, the control of temperature, the best material on or within which the seed is to be placed to germinate, the time limit of germination, always with the object of making every seed sprout which is at all capable of germination within any reasonable time.

The separation of the pure seed from its own chaff and from all foreign matters, the identification of all foreign seeds, the detection of what are to be considered adulterants, etc.—all these things must be subjects of study and discussion in this Association.

It will also be competent for this Association, after sufficient data have been gathered, to determine for the more important agricultural seeds the limits of purity and of vitality; that is, what shall be considered a satisfactory degree or percentage of purity in each and a satisfactory germinating power.

For planning and directing the work of studying all these matters regarding the testing of seeds, a committee was appointed, consisting of Mr. Edgar Brown, in charge of the Seed Laboratory of the U. S. Department of Agriculture; Prof. H. Garman, botanist of the Kentucky Agricultural Experiment Station, Lexington, Ky.; and Prof. A. D. Selby, botanist of the Ohio Agricultural Experiment Station, Wooster, Ohio. A considerable number of seed analysts are now engaged in the co-operative work and study which has been suggested to them by this committee.

In all these matters we need and I know shall welcome any facts or suggestions with which the American Seed Trade Association or any of its members may favor us. Our relations should be most cordial.

The feeling is perhaps not unnatural, but certainly wrong, that an institu-

tion or a society concerned with the testing of the quality of any product is, ipso facto, in some sense hostile to the producers or dealers in that article. Such a society should aim to foster legitimate trade and fair competition. To expose inferior goods or fraudulent practices is the work of a friend and not an enemy. And if we may have occasion to call attention to what seem to us grave faults in the methods of the seed trade, it is only that in our view certain changes would be to the advantage of both buyer and seller.

The grower will not go on for long buying seeds regarding the quality of which he has no knowledge, in packages whose label calls attention to the fact that all responsibility is disclaimed. He will insist on getting this knowledge from some source. He will trade only with those firms who give what knowledge they can give as to purity and vitality of seed.

I cannot suggest how it is to be secured, but I am convinced that in time the seed trade will put itself into shape to give a statement as to the purity and vitality of the leading agricultural seeds, such as the grasses and clovers, which they handle.

The main points which I wish to emphasize are—that the testing of seeds as a part of Control work in the interest of farmers is being forced upon us; that we are trying to secure uniformity and accuracy in this work; that we believe it will help and not seriously embarrass legitimate trade, and that we need and invite suggestion and fair criticism from the members of the Seed Trade Association.

About Danish Root Seeds.

We have received from Hjalmar Hartmann & Co., the leading vegetable seed growers of Denmark, a large chart giving illustrations in colors of the principal types of roots, showing the standards of form and color which the Danish government is encouraging by establishing periodical competitions between the large growers of seed for export, and awarding certificates for "First Class Stock" to those firms who excel.

In an interesting letter Messrs. Hartmann say that formerly the root-seed used in Denmark was imported from Scotland and Germany. By experiment it was ascertained that excellent conditions for the produce of this kind of seed prevailed in Denmark, however, and it was not long before the government became interested in promoting this home industry and the results were in all respects unexpectedly gratifying. By carrying out the policy above mentioned a constant improvement of quality is assured. The government award is a very highly prized and valuable acquisition for any firm and there is constant, unremitting striving for the honor. The comparative trials at the government experiment station take cognizance not only of beautiful typical form and smoothness but also the percentage of nutritive substance per kilo per Hectar. The government's experiments have proven that a first class stock of Danish seed—for instance, "Barres Sludstrup stock"—yields an extra profit of about 50 Kroner per Danish acre. It is reported that all root seeds will be scarce this year as the roots were badly damaged during the last winter.

Everything "For the Land's Sake."

The one firm in Boston where all good forms of plant food may be obtained, is the Bowker Fertilizer Company, opposite Faneuil Hall at 43 Chatham St. All greenhouse chemicals, Nitrate of Soda, Ground Bone, Potash Salts, Sheep Manure and Wood Ashes can there be had at first hands.

BOWKER FERTILIZER COMPANY

Everything "For the Land's Sake."

GIANT PANSY SEED

The KENILWORTH Strain

is unsurpassed; the immense flowers of 3½ to 4 inches are of perfect form and substance; every tint and shade is produced in striking combination and endless variation of beautiful colors and markings; it is the result of years of selection; it embraces the largest and best of English, French, German and American novelties; 1909 seed greatly improved by rich shades of brown, bronze, red and mahogany. New seed: 1000, 25c; 2000, 40c; 6000, \$1; 12 oz., \$1.40; 12 oz., \$2.50; oz., \$5.

RAINBOW is a blend of over 50 of the latest introductions of giant pansies of the most beautiful, gorgeous colors blotted, striped, veined, marbled, etc. With every \$1.00 worth of Kenilworth strain, I will send 1000 of Rainbow free; and with other amounts in like proportion.

Of Interest to Retail Florists

THE USE AND ABUSE OF A GREAT CONVENIENCE.

Probably nothing in the way of an innovation has done more to help the cut flower business at a season when it is most in need of a boost than the adoption of the plan of mutual interchange of business, by telegraphic order. "Flowers by Telegraph" was a shibboleth which quickly found favor with far sighted florists in various popular centres and instead of shipping designs or cut flowers long distances in cold or hot weather with little assurance of their arrival in time or in good order at their destination a telegram to a brother florist at the point of delivery did the work satisfactorily to all concerned.

The advertisements on this and adjoining pages are those of the live florists in the towns represented and any florist in remote locality can transfer

orders to these firms with a certainty that they will be promptly and adequately filled. But there is reason in all things and strange tales come to us occasionally of the absurd demands sometimes made by thoughtless florists in the transmission of orders. One New York florist furnishes instances as follows:

"A prominent florist in one of our western cities wrote asking me to deliver a \$3.00 box of flowers, through our correspondent in Denmark. I waited some time before replying and then asked whether they had considered the amount of order \$3.00, after the discounts—20 per cent. for the western or original florists, 20 per cent. which I would require, 20 per cent. for our representative in Denmark—had been deducted, making a total of \$1.80 for discounts or percentages, and leaving a balance of \$1.20 for flowers for the poor recipient.

"Frequently we have requests to meet incoming steamships at their landing dock and present the bouquet or box of flowers to the passenger as they step ashore; \$1.50, \$2.00, perhaps \$3.00, is the amount for these orders and it takes more than an ordinary messenger to make this delivery as it requires some one with no little detective ability.

"Sometimes we receive rather dictato-

rial letters requesting us to send \$1.00 or \$1.50 box of sweet peas to a departing steamship leaving Hoboken, N. J.

"However, I don't rebel against small matters providing we can get cost out of the transaction. Of course you are familiar with the old Scotch adage, 'Many Micksles Macks a Muckle.'

"I find quite a difference between certain towns as to the general run of orders, some towns being much given to economy. To such I would apply another Scotch phrase and remind them that, 'You canna get a gold sovereign for a shillin'."

We are inclined to believe that a little more courage in handling the customer, giving him or her a more vivid idea of what it costs to command such modern luxuries, might have a salutary influence in inducing a more liberal stretching of the purse strings.

A NUISANCE CONDEMNED.

Thomas F. Galvin, of Boston, has given publicity to the following notice through the Boston daily papers, which will, no doubt, strike a responsive echo of approval from every florist in the country who respects his business and himself.

Certain florists of this city in soliciting orders for flowers for funerals are so lost in their zeal to obtain business as to fail to appreciate the amenities due the grief-stricken, and inconsiderately intrude themselves or their grasping representatives on families suffering from the shock incident to the loss of those near and dear to them. These ghouls of the business are frequently rebuked by the indignant mourners and friends of the deceased, but their actions sometimes tend to create a false impression of the methods employed in the flower business, and those of us who conduct our efforts along legitimate lines are often unjustifiably criticised. We appreciate that flowers as a gift are usually the best external evidence that persons have of showing their sentiments towards the departed and their family, but we most emphatically disapprove of the tactics employed by the inconsiderate element referred to. Their importunities have grown akin to a common nuisance, and my purpose in writing this letter in behalf of my fellow florists is to ask the public to aid the reputable dealers in our efforts to correct the abuses by giving short shrift to these objectionable solicitors.

CHICAGO NOTES.

S. A. F. Convention.

The florists' bowling team is getting into line to do some good work at the convention. They beat the Breen & Kennedy team crack players last Friday night.

The array of silver cups on exhibition at Ed. Winterson's is a fine one, and helps to increase the interest in the coming convention, when they will be awarded.

W. H. Murphy of Cincinnati, superintendent of Trade Exhibits for the S. A. F. convention, is here looking after that business and evidently is meeting with success.

Personal and Miscellaneous.

J. McNeill, of J. Kidwell's, is at St. Charles, Ill.

Bernie Zalinger will take a vacation in a few days.

Mrs. Port has closed her store on West Madison street.

Frank Hagan, of George Reinberg's store, is away for a rest.

J. Klingel spent a week in Milwaukee and another in the country.

Wm. J. Smyth is expected home from the hospital within a week.

F. Radke, 435 East 43rd street, is spending two weeks at Wheaton, Ill.

The Fleischman Floral Co. have closed their North State street store.

Miss Hertha Tonner is planning a northern lake trip for the near future.

Louis Winkleman, head rose man for Bassett & Washburn, is on a vacation.

Ed. Hauswirth returned from Elgin with his cavalry after an enjoyable ten days' camping.

Frank Beu has returned from an eastern trip and is ready for another year's business.

Sidney Wiffin, of the Flower Growers' Market, had a week-end vacation at St. Joseph, Mich., and South Bend, Ind.

Visitors: J. F. Fox, of J. M. Fox & Son, Milwaukee, Wis. Mr. Fox recently figured in an auto accident and suffered a broken arm, which gives him an enforced vacation. J. W. Davis, Davenport, Iowa; Harry Philpot, Winipeg, Man.; J. D. Carmody, Evansville, Ind.; LeRoy Thorpe Romaine, Park Ridge, N. J.

Much interest has been shown in the series of five games of base ball between the greenhouse employees of Bassett & Washburn of Hinsdale, and J. C. Vaughan of Western Springs. The final game was played on July 18 and was won by the Bassett & Washburn men, they having scored 26 points to the Vaughan's 19, securing three games out of five. Up to the last half of the game the score was even and the crowd was enthusiastic to say the least.

NEW RETAIL FLOWER STORES.

Plainwell, Mich.—E. M. Latte.

Dixon, Ill.—The Dixon Flower Shop, 106 E. 1st St. (C. H. Fallstrom, proprietor).

In advertisement of Alex. McConnell, New York, in last week's number, his telephone number was printed incorrectly—487-488 Murray Hill, is correct.

Flower Market Reports.

BOSTON Mid-summer dullness is evident to a marked degree. Sweet peas are on the wane while carnations, although poor in quality, have a fair demand. Roses are holding well but the large supply of short-stemmed has held prices down. Asters are just beginning to appear and the few that have been received are in excellent condition.

The market was well supplied with everything in season the past week, but there was very little business up to Friday. Carnations are as plentiful as ever but the quality very poor. Winsor is very satisfactory, also Perfection in white. In the rose line Killarney and Detroit are of fine quality and have found ready sale. Asters have made their appearance, but of short stem. Longiflorum and giganteum lilies have been in over-supply, with little or no demand; the same may be said of sweet peas.

CHICAGO According to our old-time florists the summer business is not falling below its usual record. In fact, there are plenty of times when there is a lively hustle to secure enough good stock to fill orders. This is especially true of roses. New Beauties are coming in, and though small, they are readily taken up. Beauties, Kaiserins, and Killarneys are the trio that lead. Carnations are proving the old saying, that they are never in the market with asters. This is the first week when asters of any quantity can be said to be in. The Queen of the Market is here and with fairly long stems, too. The season in some localities has favored a good crop and in others has produced poor flowers. On the whole it is considered a fairly good one for asters. Sweet peas are too much in evidence on all sides, but the stock is fine for July. There is a good demand for Easter lilies.

DETROIT Two words, "Nothing doing," are about all that can be said of local affairs. Have we got to accept that situation every summer? Are we making so much money in nine months that we can lay idle for three months? Suppose we do, have we a right to do that? Even if everybody has flowers in their own yard, is that a sign for us to stop? Not a day passes but the request is made for a flowering pot plant. What can we offer now? Our cut roses and carnations are now at their worst; can that not be remedied? Look at the flower shops in Paris, Berlin, Leipzig, they are looking as splendid and tempting now as they do in winter time. Who is going to make the break here and show the way to convert three long months of loss into a period of profit? The demand is there, stimulate it, coax it, cater to it.

Business continuing fair for the season, there being a fair volume of trade, with supplies and qualities corresponding. Roses of all kinds are a little draggy—excepting the white varieties, which are in very good demand. American Beauty keeps on an even keel as to quality, but the demand lacks that

liveliness which is so essential to a healthy market. Very few Liberties are coming in, and these only of medium quality. As for Richmonds they are almost a negligible factor and fly open so quickly that profitable marketing is next to impossible. Kaiserins are leaders in white roses, of course, and the demand for these has been exceptionally good. Killarneys are also among the cheerful propositions. Little can be said of the carnation market—this staple being largely superseded for the present by the aster. The latter is improving daily and some of the greenhouse-grown stock which is now commencing to arrive is really excellent. There is a brisk demand for gladioli—especially the high grade sorts such as America and Shakespeare. Sweet peas are very poor and no likelihood of improvement for some time to come. There is the usual summer demand for lily of the valley—a little spasmodic, perhaps—but evening up fairly well as returns are made up. Quite a little crop of Easter lilies appeared during the week and these met with ready sale. The demand for orchids has improved slightly—with supply more plentiful, if anything. The ideal cool subject for decorations, etc.,

Field Grown Carnation Plants

On account of general scarcity caused by the dry weather we advise early booking. Send to us for your requirements. We can furnish the very best the season affords.

is the water lily—especially the fancy sorts—the latter being in excellent demand.

There has been a very marked dropping off in business within the past week. Water lilies are more in demand than almost any other flower. Carnations are of inferior quality. There is a very limited quantity of sweet peas owing to the destructive rains earlier in the season.

FLOWER MARKET REPORTS.

(Continued from page 115)

There are no interest-
NEW YORK ing features of the market now. The Bridesmaids and Brides being shipped are of an inferior quality. Beauties are plentiful enough to supply all demands and do not command much of a price. Killarneys, Marylands and Kaisersins of good quality are to be had in quantity. Carnation shipments are somewhat lighter than last week, but most of them are small, although some good stock is still to be had. Asters are much more plentiful than they were. The number of lilies received and disposed of daily, even though the price is low, is remarkable. The demand for lily of the valley is spasmodic; there is usually sufficient to supply a good demand. Gladioli are on the increase. Receipts of orchids are light. General business is quiet, but up to usual July averages.

Calla Bulbs.
For page see List of Advertisers.

BULBS.—This ad. is our drummer. We certainly have got them and they are O. K. in size and condition owing to cold and damp spring. And the prices are right—delivered to you at 50 per cent. below Dutch bulbs, and being acclimated they flower ten days sooner. They are true, sound, clean, dry, healthy, selected stock. A postal will bring you all details as to varieties to plant or force, with cultural directions. D'Alcorn, The Southern Daffodil Farm, Portsmouth, Va. Where the fine Emperors come from.

AMERICAN ASSOCIATION OF RAILROAD GARDENERS.

The third annual meeting of the American Association of Railroad Gardeners will be held in Philadelphia Aug. 24 at 10 A. M. A very interesting program has been arranged for, and some of the best examples of railroad gardening in America will be inspected.

All railroad employees having superintendence of lawns, care of flowers, shrubbery and trees, and the general aesthetic appearance of railroad waylands are eligible to membership, and all persons interested in this feature of railroad work will be gladly welcomed.

GEO. B. MOULDER, Secretary.

BUFFALO FLORISTS' CLUB.

The regular meeting of the Buffalo Florists' Club was held on Tuesday, July 13, and considering the warm evening it was well attended. Among the special items was the discussion of the annual picnic which was later decided to be held on Wednesday, July 28, at Bedell House, the entertainment committee having full power to act.

At the regular September meeting a paper will be read by W. A. Adams on the "Slaughter of Flowers." Other papers are being prepared for later meetings by President Slattery, Wm. Legg and Chas. Guenther.

CLUB AND SOCIETY NOTES.

The Bar Harbor Horticultural Society will hold their second annual flower show on August 14, in the Building of Arts, Bar Harbor, Me.

The Albany Florist Club propose to hold their first flower show in November; the date is not yet announced. The committee has already begun its solicitation for exhibits.

INCORPORATED.

Denver, Colo.—Northern Colorado Nursery Co.; M. R. Kilburn, A. S. Kilburn of Loveland; capital, \$10,000.

During Recess

GARDENERS' AND FLORISTS' CLUB OF BOSTON.

The list of games at the club picnic on July 28, at Randolph Grove, includes the following events, 22 in all, starting promptly at 10 a. m.:

Base Ball for Boys. Base Ball—Commercial Growers vs. Private Gardeners. Putting the Shot—Open. Flag race for Girls under 16—Handicap. Three-legged race, Open—for Men. 100-yard race for Girls under 16—Handicap. 50-yard race for Boys under 12—Handicap. Married Ladies' race, 75 yards—Handicap. Three-legged race for Boys. 50-yard race for Girls under 12—Handicap. Sack race for Men—Open. Hoop race for Girls over 18. Quoit Match—Club Members. 100-yard race—Club Members. High Jump—Club Members. Flag race for Married Ladies. Fat Men's race—Open. Running Broad Jump—Open. Half-Mile race—Club Members. 30-yard race for Girls under 8. 30-yard race for Boys under 8. Tug of War—Commercial vs. Privates.

The prizes, as usual, consist of a varied selection of valuable and useful articles, which have been donated by members and friends of the club. Circulars giving full particulars, rules, etc., have been distributed and additional copies can be procured from Secretary W. N. Craig, North Easton, Mass., or Peter M. Miller, 32 South Market street, Boston. Tickets, 50 cents each, can be procured from the latter and must be purchased by 24th inst. Ladies and children (boys under 16) admitted free.

On August 9 the Detroit florists will have their outing to Bois Blanc. The regular athletic events, notably Rob. Rahaley's base ball nine, will stimulate the usual large attendance.

SEED TRADE NOTES.

St. Joseph, Mo.—The Mission Valley Seed Co. has sold its stock to the Neudorff Hardware Co.

Hudson, Wis.—Miss C. H. Lippincott has recently transferred her seed business here from Minneapolis.

Sioux City, Ia.—The Sioux City Seed & Nursery Co. has planted about 5,000 acres of corn for seed.

Boston, Mass.—A meeting of the stockholders, stall holders and other florists who sell their flowers in the Park Street Market is called for July 24 at the American House, to take action on a change of location.

Jacksonville, Fla.—The business of Mills, the Florist, is to be incorporated for the purpose, as stated in their application, of conducting a florist, nursery, horticultural, pottery and real estate business.

RICHMOND (IND.) NOTES.

On July 1 The E. G. Hill Co. removed their office to their West Side place which has been under construction for the past three years. They have moved a good portion of the glass from the East Side place, but have left some ten houses there for a retail plant, which are now the property of Mr. F. H. Lemon, he having withdrawn from the corporation and undertaken the city retail trade on his own account. He has a fine lot of glass admirably located for his purpose and with a first rate outlook for business.

The Hill corporation consists of E. G. Hill, president; Jas. H. Hill, vice-president and general manager; S. A. Hill, secretary; E. H. Mann, treasurer. The new plant consists of eleven houses each 500 feet long, heated and benched according to the latest and best ideas, and planted with the best standard and fancy novelty stocks in this firm's specialties.

LENOX (MASS.) NOTES.

G. Wells Allwood has taken a position with A. J. Loveless as foreman.

Herman Schmeiske, formerly gardener for Miss Kneeland, has taken a similar position with Senator Crane at Dalton.

Robert Macconachie has taken a position as gardener for Miss Adele Kneeland.

Ernest Marsh, formerly foreman at Wyndhurst Gardens, sailed July 3 for a visit to his home in the west of England. On his return he expects to resume work on the James B. Duke estate, Somerville, N. J.

PHILADELPHIA NOTES.

William K. Harris, we are glad to report, is much improved this week and his family and many friends are now breathing more freely.

Visitors the past week: Mr. Stein, of Stein and Levin, San Francisco; Edward Roehrs, of Julius Roehrs Co., Rutherford, N. J.; Mr. Becker, of Avondale Flower Co., Cincinnati.

The Pennock-Meehan Co. report an unusually brisk demand for field-grown carnation plants. The dry weather has played havoc with development in many localities—hence good stock is scarce—especially among the most desirable varieties.

Edward Roehrs used to think there were at least two wizards in this country: Luther Burbank and the Castle Circulator. Since the R. N. Y. got its work in on Luther, he is inclined to cross one off, and be theocratic and automatic. Summer street scouts please note.

The schedule of prizes for the Fall Show of the Pennsylvania Horticultural Society has been issued, and copies of same may be had on application to D. Rust, Horticultural Hall, Broad and Locust streets. The show will be of four days' duration: November 9th, 10th, 11th and 12th.

H. C. Woltemate, Mount Airy, asks a slight modification of last week's news item. He has leased the old Butler place at Chestnut Hill, with a privilege of buying at a stated price; and has put his son Gilbert in charge. There is something like ten thousand feet of glass on the place; and while it may develop a retail trade it is not the intention to cater to that at present.

Wm. J. Muth, of the Philadelphia Cut Flower Co., has just returned from an enjoyable sojourn at Dutton's Mills—a modern Newport located between West Chester and Malvern. We have heard nothing of roulette wheels there as yet—like the other Newport—but think that anyone who wished might roulette all he wanted and no one would say what! Ralph Shrigley, of the Leo Niessen Co., has had a splendid time up Lancaster way. And—but no—there are too many for the size of this paper. We refrain.

The transportation committee report progress, with a good prospect of connecting with Baltimore and Washington for the trip to the convention. Estimates for the number of the Philadelphia party vary from thirty to sixty. The difficulty is that we have so many plant and supply concerns who send their help on ahead to arrange their exhibits. This reduces the party by at least twenty or twenty-five. The Chesapeake and Ohio is the route favored so far. All nearby members wishing to join the Philadelphians should write at once either to John Westcott, Arthur Niessen, or E. J. Fan-court.

WANTS, FOR SALE, ETC.

Advertisements in this column one cent a word. Initials count as words. Cash with order. All correspondence addressed "care HORTICULTURE" should be sent to 11 Hamilton Place, Boston.

HELP WANTED

GOOD MEN

When you need good men, skilled or unskilled, Write:

THOS. H. BAMBRICK

34 South 7th Street Philadelphia

Help of all kinds, including that for Florists, Nurserymen, Seedsmen and the Horticultural trade generally.

HORTICULTURE needs a wide-awake representative in every town in the land. Good commission paid on advertising and subscriptions. If you are ambitious, write for terms.

WANTED—An honest, sober, industrious man who understands the growing of pinks, mums and single violets, principally, for local trade, to call at 40 Columbus St., Newton Highlands, Mass., at once. E. A. M., Newton Highlands, Mass.

WANTED—A young, married, hustling, working foreman to take full charge of place where roses and carnations are principally grown. Must be sober, experienced and well recommended. Fair wages and increase when ability is demonstrated. Permanent if successful. J. R. Freeman, 612 13 St. N. W., Washington, D. C.

SITUATIONS WANTED

GARDENER. 31, married, wants situation. Honest, sober, thoroughly understands the care of gentleman's place, growing flowers, fruits, vegetables and landscaping. Ed. Walther, Millwood, N. Y.

FOR SALE

For Sale Greenhouse Property

Located at Somerset and Howard streets, North Plainfield, Somerset County, New Jersey. Dimensions 248 x 106 ft. Contains three greenhouses 20 x 175 ft., steel frames. Trolley lines pass property. Will sell cheap and on easy terms. For particulars apply to F. B. DAILEY, care F. BERG & CO., - - Orange, N. J.

FOR SALE—Special 16 x 18 and 16 x 24 double thick glass in "A" and "B" qualities. Buy now and save money. Write PARSHESKY BROTHERS, INC., 59 Montrose Ave., Brooklyn, N. Y.

IS YOUR NAME IN THE ABOVE LIST? IF NOT, WHY NOT?

LAWN DECORATION.

(A Paper read Before the Florists' Club of Philadelphia by Edwin Lonsdale.)

Lawn adornment opens up a very wide field, altogether too wide to be considered at all satisfactorily in the brief space that may be allotted to its consideration this evening, so that the best that can be done with so important a subject under existing conditions is to give same a "touch and go" treatment.

The first thing that naturally suggests itself when considering the embellishments to a lawn is to produce an inviting and restful effect, and the very best material to make use of is shrubbery and shade trees judiciously planted, and what is of equal importance is a seat here and there; let these be as informal or as rustic, yet as comfortable for the purpose intended as it is possible to have them. Let shrubs, both the deciduous flowering and the ornamental evergreens be disposed as nearly with natural effects as it is possible to do. Many of the strong growing grasses add a grace to any plantation that nothing else can give.

Don't Dot the Lawn With Plants.

Do not dot plants on a lawn unless same is made to appear to have naturally escaped from a nearby group. I once saw a lawn planted with such regularity that in the distance the bushes had the appearance of cocks of hay.

Let the shrubs occupy spaces on the extreme outsides of the lawn, avoiding straight lines in the planting in all cases, allowing sufficient space between each plant for the future development, and for the first few years after planting what may seem too much room may be occupied with such flowering annuals as may suggest themselves to those who have the work in charge, and the more lasting hardy perennials could to advantage be interspersed between.

Avoid Clashing Colors.

Great care must be exercised in the association of the various colored annuals and the perennial flowering plants to avoid clashes in coloring. It is by far easier to avoid color clashes in the tender bedding plant combinations than it is with the hardy outdoor flowering plants, although too often we do see the scarlet zonale pelargoniums and the majenta-pink colored varieties of the same, in too close proximity with each other to be harmonious.

Vases judiciously placed, which means never in the centre of a plot or lawn, and where water is of easy access so as to give in abundance when requisite, which is generally once a day and frequently twice, are oftentimes very effective. Especially is this the case on the edge of a pond or lake, but by all means refrain from planting purple petunias in the same vase with scarlet geraniums or any other colors with which they may produce discord.

Many of my hearers will remember that strong paper read at a convention in the early history of the Society of American Florists, held in Buffalo, N. Y., in which the essayist advocated the omission of all flowering plants from lawns and pleasure grounds, to have nothing but grass, trees and shrubbery, and you will also remember what an uproar went up all over the

country in vigorous protest. And only last summer a lady visitor at Girard College, on entering the lodge gate, stood, and in no unmistakable terms declared, "What a pity to cut up the lawn and plant thereon those horrid geraniums," and so it goes. It is impossible to please everyone.

Cactus Bed a Great Attraction.

The cactus bed which we have in Girard College grounds attracts more attention than all the croton, geranium, or miscellaneous beds combined.

The President of Girard College only a short time ago said 'with much apparent gratification that the "front" never looked better. While the too plentiful use of the scarlet geranium (*zonale pelargonium*) may not be considered in the very best taste as we have it this year, I believe its very brilliancy in coloring in the past has attracted many persons' attention to the gardening, and when once a person's interest has become aroused in gardening, the rest is easy. The end has justified the means. It has acted as a means to an end, and has acted as a primer as it were, or rather the kindergarten to aid floriculture.

In a public, as well as any other garden, the geranium appeals to the popular fancy, and for that purpose I believe it will hold its own for a very long time to come. Personally, I have no use for the pink varieties, for the most part, because they do not harmonize with the brighter reds or scarlets. At one time I did not like the salmon-tinted varieties of geranium, but now I welcome them, because they harmonize with the brighter reds and scarlets. There is no color clash with these brighter colors, provided the blue combination is kept in due subjection.

A Hammock Corner.

It should be understood in this connection that the landscape gardener has completed his work, though one suggestion I will venture to propose, and that is when space admits, I would advise that a triangular tree plantation be made not too far away from the residence, and that these trees be the pin oak (*Quercus palustris*) where said trees render a good account of themselves, or some better tree for a given locality when such suggests itself. Let same be planted at least 16 ft. apart, in triangular form and those of my hearers who contemplate such a planting will be surprised how amenable they will be to the prescribed landscape effects and, what is of equal importance, after they have had a few years growth they may be brought into requisition as hammock supports. Three trees properly disposed will support or rather furnish supports for three hammocks, which will undoubtedly furnish another point in the restful effect so much desired in all lawn adornments.

Keeping Up a Succession.

The planting of flower and foliage beds in lawn adornment is considered to be worthy of our best thoughts. Especially does this apply in public and semi-public gardens connected with our popular institutions. In the Girard College grounds with which yours truly is connected, the idea is to make as much display with the plants we have on hand as is possible, and we proceed as follows: In the spring time we

plant pansies, forget-me-nots, *Alyssum saxatile*, and *Arabis alpina* between and associated with tulips, hyacinths, etc., which had been planted during the late October and early in the November previous. This combination, for spring flowering, is very effective. Wall-flowers are also found to make good for spring bedding when planted as above indicated between bulbs of last fall's planting or for independent planting in spaces unoccupied. Wall-flowers sown late in June or early in July, if taken care of, as to transplanting once or twice, will make very effective planting for spring work, and for summer blooming there is nothing superior to geraniums and when we desire foliage plants nothing is comparable to crotons. The surprise is, judging from how well these showy-leaved plants cover themselves with glory in and around Philadelphia, that more of them are not used elsewhere. Cannas, as a large flowering plant for distant effect are most satisfactory, and as edging plants nothing is superior to *Abutilon Savitzi*, which gives the "white line" more effectively than any other plant that I know. *Echeveria* and *alternanthera* are much used where formal designs are desired, but these are being used less and less as truly artistic instincts are developed, and the time is not far distant when the formal flower bed will be a thing of the past.

PUBLICATION RECEIVED.

The Grapes of New York—It is a splendid service that the Department of Agriculture of the State of New York has rendered to the fruit culturists of the country in issuing this noble volume. The preface states that the purpose of the work is to record the state of development of American grapes and that while the title implies limit to a locality, yet this locality (New York) is really representative of the entire country. The book, which is a quarto of 564 pages, is the result of years of recorded observations by the New York Experiment Station staff and is the second in the series of fruit publications being prepared under the supervision of Director W. H. Jordan, the Apples of New York having been previously issued. The author, U. P. Hedrick, and the other gentlemen who have assisted him in the immense amount of labor which such a work involves have evidently done all in their power to cover their subject completely from all standpoints and the book bears on every page distinct evidence of the painstaking devotion with which their task has been carried out. While a vast amount of data has been recorded, yet the text is notably free from dry statistical flavor and all is presented in the most interesting narrative form. The history of the origin of the Rogers' hybrids is almost a romance. Grape breeding should and undoubtedly will receive a great stimulus as a result of the issuance of this volume and the inspiration which its pages yield. Not the least of the interesting and instructive features is the series of full-page color plates of which there are 101, each showing a bunch of one variety with foliage and stem, beautifully executed. A portrait of Edward Stanford Rogers is given the place of honor as a frontispiece.

MASSACHUSETTS AGRICULTURAL COLLEGE.

The demand for graduates has been greater during the past season than the supply. Several changes have been introduced in the course to be given by the floricultural department during the coming year. Up to the present time the course has been given only in the senior year, but next year it will be extended to the junior year.

During the first half year a practical course in greenhouse management will be given. There will be no definite lecture work but the students will be taught to do the practical work which goes with the management of a commercial establishment. Students selecting this course will be expected to arrange their hours according to the needs of the work.

During the second half year the instruction given will be in greenhouse design, construction and heating. The course for the first semester of the senior year will be in the care and management of greenhouse crops, design work and the retail trade. During the second half year the instruction will be in spring greenhouse crops. In this course it is intended to give more attention to the treatment of outdoor herbaceous material, which should form such a prominent feature of florist work. The Short Course in Floriculture will be given during January and February, the same as last year.

The department has recently received from a manufacturing company a complete model of their return steam trap for greenhouses. This model will be used for class-room demonstration. The action of this firm is greatly appreciated by the college and it is hoped more firms may co-operate in this way, so the instruction may be more and more practical and helpful along all lines.

USEFUL BOOKS.

We can supply the following books, postpaid, at the prices listed:—

The American Carnation. C. W. Ward. Price, \$3.50.

Chrysanthemum Manual. Smith. Price, 40 cents.

The Chrysanthemum. Herrington. Price, 50 cents.

Manual of the Trees of North America. C. S. Sargent. Price, \$6.00.

Soils: How to Handle and Improve Them. S. W. Fletcher. Price, \$2.20.

Daffodils-Narcissus and How to Grow Them. A. M. Kirby. Price, \$1.10.

The Art of Landscape Gardening. By Humphrey Repton. Price, \$3.20.

"Every Bug Has His Dose."

Insect-destroying preparations that do their work well and effectively are the cheapest. Bowker's Arsenate of Lead and Bowker's Pyrox are recognized standard insecticides and fungicides for both indoor and outdoor use. Bowker's Insect Emulsion destroys many kind of plant lice, black and green flies, etc. Call or send for catalogue.

DEVOTED TO THE
FLORIST, PLANTSMAN, LANDSCAPE GARDENER AND KINDRED INTERESTS

PUBLISHED EVERY SATURDAY AT 11 HAMILTON PLACE, BOSTON, MASS.

SUBSCRIPTION, \$1.00 PER YEAR

DEAR SIR:—

It occurs to us that you may have under consideration the revising of your catalogue list of Geraniums, Cannas or Dahlias but the difficulty is where are you to secure the stock to fill your orders without having to wait a year to work it up.

Do you know that we can suggest a list that is right up to date; and that we can furnish the stock so that you may depend on any order you may place with us being filled to your entire satisfaction; that we are prepared to propagate these Specialties in large quantities and that our collection will compare favorably with any in the country,—there are few equal and none better.

You know where we stand on the Geranium propagation, but thought perhaps you did not know that we grow Cannas in 3 in. pots, extensively, and that we have some 200,000 Dahlias planted out, and that we never had a better prospect for a splendid crop of roots; and then we have 70,000 Dahlias in 3 in. pots, nice roots for mailing; besides this we grow a general line of Bedding Stock and are making interesting special prices for next season.

We extend a cordial invitation to all interested to visit us. If you cannot come, will you kindly write us what your probable requirement will be.

Araucarias OUR Specialty

Araucaria Robusta Compacta and **Excelsa Glauca**, Specimen Plants, Spring 1908 importation, 7 inch pots, 25, 30, 38, 40 inches high, 6 years old, suitable for the veranda, porch or lawn, \$2.00, \$2.50, \$3.00 each, worth double that amount.

Same Varieties, April 1909 importation, 15-20-22 inches high, \$1.00, \$1.25, \$1.50.

Araucaria Excelsa, 5, 5½, 6 inch pots, 2-3-4 years old, 40c., 50c., 60c., 75c., \$1.00.

Kentia Forsteriana, 6-7 inch pots, 25, 30, 40, 50 inches high, \$1.00, \$1.25, \$1.50, \$2.00, \$3.00 each. **Belmoreana,** 6 inch pots, 5 to 6 leaves, \$1.00, \$1.25, \$1.50.

Cocos Weddeliana, 3-4 inch, 15c., 18c., 25c.

Adiantum Hybridum, valuable for fronds for cutting, big bushes suitable for 6, 7, 8 inch pots, 30c., 40c., 50c.

Araucaria lutescens, 4 inch, 25c.

Begonia Gloire de Lorraine, 4 inch, 25c.

Lonsdale light pink and the dark pink.

Sago palms, 10c. per leaf.

FORTUNES IN FIG ORCHARDS

E. C. Robertson

General Sales
Manager

501 Kiam Bldg., Houston, Texas

Texas Figs Are World's Fair Winners

The famous fig preserves made at Aldine, near Houston, are the finest and best known in the world. One important thing which must not be overlooked is that fig orchards never fail to produce large, profitable crops here.

One Acre Set in Figs and one Town Lot, both for \$230, Payable \$10 down and \$10 per month, without interest. No payments when sick.

CLEAR WARRANTY DEED IN CASE OF DEATH

Local cash market for fruit. Single crop pays for land and lot. Money back in four years with annual income thereafter for life. Better than banks, bonds, or life insurance. If you want to enjoy life in South Texas under your own "vine and fig tree," or make a safe and profitable investment, write for further particulars.

THE SPECIAL CONVENTION NUMBER

In Honor of the

S. A. F. Twenty-Fifth Anniversary

At CINCINNATI

WILL BE ISSUED ON AUGUST 14

This will be an issue of exceptional interest and will be widely circulated and widely read. Its value as an advertising medium for all floral and horticultural material cannot be over estimated. S. A. F. trade is always worth a special effort at Convention time. Send your order in early and it will have our best attention.

Euphorbia fulgens *E. Jacquinæflora* and *E. Poinsettia pulcherrima*

The name *Euphorbia* was given to this plant by Dioscorides. Pliny says it was so called in honor of Euphorbus, physician to Juba, king of Mauritania. The history of the names of plants, or their meaning I find to be quite a useful study, as it helps to fasten the name of the plant in one's memory, the one helping to recall the other. Again, if anyone asks the name of a plant, and you tell them, see how helplessly the average person looks at you, but if you can tell them also the meaning or history of the name, they get interested and begin to think that you are not simply making it up on the spur of the moment to hide your ignorance. I remember some time ago a lady asked me the name of a *Clerodendron*, and when I told her, she asked me if I knew what the name meant. I replied that I believed it came from *kleros*, which means chance, and *dendron* a tree. The natives did not know whether it had any healing virtues or not, but they took chances on it. "There," she exclaimed, "is a good common name for it—the chance tree."

But to return to *Euphorbia*, a genus comprising about six hundred species of trees, shrubs and herbs. The two above named are the most useful for the gardener or florist for greenhouse culture. Some have told me they have a hard time rooting *E. fulgens* and considering the treatment I quite often see this attractive Christmas flowering plant gets after cutting the crop, I do not wonder they do. Very often it is pushed under a bench, or thrust into some dark out of the way corner, and then they try to root the soft spindly growths that start away from the old wood. A better way is to set the cut-back plants on a shelf near the glass in the full sun, and not dry them off severely. In the spring you will get nice firm cuttings. When they are about three inches long remove them from the old plants, and trim the lower leaves and insert in sand. We use a seed pan about two inches deep and a foot square, in which we put about 120 cuttings, giving them a thorough soaking with water, and set them near the glass in a house where the temperature is about seventy degrees. Do not water them again until the sand begins to have a dry appearance on top, then give another good soaking. They will be rooted in about a month, after which, we prick seven or eight into a six-inch pot filled with a good rich open loam, keep close and slightly shaded for a day or two, and then place in the full sun.

After the first of June they can be set outdoors. Ashes is a good thing to set them on or plunge them in. By the second week in September they will have a nice sturdy growth, and can get some manure water once a week. Removing them to their quarters indoors will also be in order. A house around sixty degrees will bring them in flower nicely by Christmas. At the time of writing, July 19, there is plenty of time to root more cuttings. These, if desired, can be pricked thickly into a ten or twelve-inch pot when rooted, and staked out nicely with thin twigs when they come in flower, making a good specimen plant. When cutting the flowers for vases, it is better to have a dish of boiling water near by to dip the ends of the stems in, to prevent the flow of the milky sap, then cover over the head in cold water for a day and there will be no trouble with their keeping qualities.

The popular poinsettia, *E. Poinsettia pulcherrima*, requires quite a long period of rest. A good place to store them is under a carnation house bench. About May 1st, is a good time to start them. They can be planted outdoors in June, and one gets a far firmer cutting than if they had been kept under glass. We find it is a good plan to pot each cutting singly in a two-inch

pot, putting about half an inch of sphagnum moss in the bottom of each pot, and filling up with a mixture of powdered charcoal and sand. Placed in a tight cold frame shaded with a cotton cloth, they will root in about four weeks, from June until the middle of September. The earlier rooted ones we plant in nine or ten-inch pots about a dozen or fifteen to a pot. They make nice specimens about three feet high for Christmas. The last rooted batch make nice dwarf plants in pans.

We find that both these *Euphorbias* are very sensitive to fresh bone meal, and would not advise its use, unless it had been mixed with the soil for three months.

George F. Stewart.

Notes from the Arnold Arboretum

In one of the preceding notes *Sorbaria stellipila* was described as a new species closely resembling the well known *S. sorbifolia* but flowering later. Today another new species may be mentioned which is just now beginning to bloom, thus flowering about a month later than *S. sorbifolia*. This species is *Sorbaria assurgens* from China. It differs in habit more from *S. sorbifolia* than *S. stellipila*, growing into a much larger shrub about six feet in height or even more. Its foliage is more graceful, the leaflets very numerous, longer and narrower with closely set veins and usually more or less curved. The large panicles of white flowers are from eight to twelve inches long and looser and broader. It has proved hardy at the Arboretum and is, particularly on account of its late and showy flowers, a shrub to be recommended. In connection with this mention may be made of another closely related species, viz., *Sorbaria Aitchisonii* (*Spiraea sorbifolia angustifolia*) from Afghanistan. This species unfortunately is not quite as hardy as the preceding one and died last winter at the Arboretum, though it had stood two of the preceding winters with but slight injuries. It is still more graceful than the preceding species, growing into a rather tall shrub of a more open habit with partly spreading and ascending stems. The flowers appear about the same time as those of *S. assurgens* in looser panicles. The foliage too is handsomer, the numerous narrow leaflets are of a bright glossy green with usually purplish stalks and also the stems are tinged purple which gives a pleasing contrast with the lustrous graceful foliage. *Sorbaria Aitchisonii* is certainly the handsomest of the *Sorbarias* and for situations where it is hardy to be preferred to the others.

The much advertised *Hydrangea arborescens grandiflora* is now in full bloom and there can be no doubt that it merits the recommendations it has received. Particularly larger shrubs are very effective, as the plant is of good habit, forming a broad round bush studded all over with its large clusters of pure white flowers borne well above the foliage. It has, however, now got a rival in the new *Hydrangea cinerea sterilis* which has as large and beautiful clusters of white flowers according to flowering branches received last year from Teas' nursery in Centerville, Ind., and a few days ago from Meehan's nursery in Philadelphia. Botanically it is easily distinguished from the other form by the grayish down of the under side of the leaves and also by the more rounded not pointed sepals; about its horticultural points I can say nothing so far, as I had not yet the opportunity to observe living plants.

Alfred Rehder.

Applying the golden rule

"The Message of the West to the East" is the title of one of the addresses to be presented at the National Irrigation Congress to be held next month at Spokane, Washington. We shall read the "message" with interest. "The West" as represented by certain senators in their action on the Appalachian bill in Congress administered a rude shock to the friends of conservation and reclamation which is all the more acute

when we recall the support given by eastern legislators when the plans for the vast irrigation operations in the West were before Congress. No wiser or more patriotic proposition is before the country at the present time than this to prevent the laying waste of the remnants of original forest still standing in the White and Southern Appalachian Mountain ranges, and no more comforting and encouraging message can come from our fellow countrymen in the far West than the assurance that the killing of the Appalachian bill was antagonistic to the sentiments of the western people and that they wish to be so understood when the question is again brought up.

Seed trade east and west

Judging from the news columns of the Des Moines, Ia., News our friend C. N. Page, president of the Iowa Seed Company, has been having something to tell the folks after his return from a trip to Washington and the meeting of the Seed Trade Association at Niagara Falls. "Eastern seed dealers are fast losing their supremacy in the seed business of the country. It was but a few years ago when the East had all the seed business, but the West is now taking the rank which it should have in this line of business," Mr. Page is quoted as having said. The gentleman does not indicate where he draws the line as to what constitutes East and what West, and this makes it rather vague as to where the lemon is presumed to fall. Neither does he specify what sort of seeds he has in mind. Whatever interpretation may be put upon the claim, however, we doubt very much whether the seed dealers East of the Mississippi for instance, or even in the line of cities fringing the Atlantic Coast are losing sleep over any fear of the diversion of their "supremacy" to the great and growing West. None, so far as we know, will admit that they ever had a better business than they have enjoyed this present season. And the dealer who will see to it that his supremacy in quality is uniformly maintained need have no fears for his future, whether he be in the far East, far West, or any other old place.

On to Cincinnati

The coming Convention of the Society of American Florists at Cincinnati should be made memorable—not alone by the work accomplished, the speeches made, the plans matured and the mammoth trade exhibition which is assured, but by a record attendance from all parts of the country. There is no question but that every individual who honors the good old Society on this quarter-centennial celebration will get full value many times multiplied for every dollar of money and every hour of the time spent regardless of the distance he may have to travel. And we should not forget that Cincinnati is entitled to all the respect we can show her on this occasion and the very least we can do is to appear in large numbers, thus helping to make the affair impressive and showing that the horticultural interests remember with gratitude the honorable part she took in giving the organization a good start in life. Cincinnati, through her florists, her hotel people, her city officials and through the generous co-operation of the Cincinnati, Hamilton and Dayton R. R. Company, set the pace for every S. A. F. Convention which has followed. The reception extended was a princely one, the welcome had the true ring, for it came from the heart and the signal success achieved by the Society to which Cincinnati so hospitably played the host owes not a little to the comradeship so well exemplified in Cincinnati's greeting to her florist visitors. So pack up and join the happy pilgrimage and help swell the crowd for your own sake, for Cincinnati's sake and for the sake of the noblest avocation that man can follow.

European Horticulture

SOME NOVELTIES IN ROSES

Etoile de France. This is Tea hybrid having flowers of a dark purple color, velvety and bright, and a bud of considerable length and pleasing shape, which has the property of keeping or lasting for a long time. The open bloom is globular, a matter of small consequence compared with the elegance of the bud stage. It is a particularly pretty flower, withstanding cool and wet weather. For cutting as a bud it is to be highly recommended. It does well in heavy soils; in light ones it is advisable in dry times to supply water to the plants in abundance, otherwise the color pales somewhat.

Karl Rosinck, H. T., is a fiery red glittering flower of a fine shape, delicious fragrance, and great durability. As a bud or in the half-open state, or fully expanded, it is a capital variety that does not deteriorate in color as it ages—a good variety as second early or late flowering, and for all purposes in the open air.

Mme. Jean Everaerts, H. P. This is one of the finest bright red roses of the best full form, with good perfume, and, being an abundant bloomer, is an excellent subject for the cut flower trade.

Mrs. A. M. Kirker, H. P., is a variety with bright cherry red flowers, double, very fragrant, with reflexed petals which impart a peculiar charm to the flowers. Growth is vigorous and the wood firm. A good autumn rose. *Victor Morlot, H. P.*, is a velvety light red flower, with a blackish tinge, large and well filled, the bud of egg form. *Mme. Segoud Weber, H. T.*, salmon pink, grand form and very full (good blooms were observed of this variety at the late show of N. R. S. at the Royal Botanic Gardens, London). Excellent for every purpose to which a rose can be put. It prefers a strong soil, and moderate warmth when forced.

Andenken an Lydia Grimm, H. P. This fine variety, of a pure, silky light pink tint, has a well filled, interesting form and fragrant flower. The growth is robust, and erect. It is one of the best of its color for cutting, the flowering shoots being of great length; and the flowers develop perfectly in any sort of weather. The color is a purer one than that of the well-known Baronne A. de Rothschild, which it also exceeds in vigor of growth and shape of the flower. Short stalked flowers are never found on the plant.

Mme. Jules Gravier, H. T. This fine variety is becoming a great favorite with rosarians. The bloom is light pink, the buds very beautiful, and the shoots of a great length. Growth is very vigorous—indeed semi-scandent; excellent for covering a wall or fence, etc., and suitable likewise as a bush, pyramid or standard. The plant is not tender, withstanding a rather low degree of cold without protection.

Mme. Ravary, H. T. This is a very free variety, having fragrant flowers, fairly full, of a light yellow color at the lips of the petals and a darker tint in the centre. Growth is compact and bushy, and in heavy soils the flower stalks frequently grow to a considerable length. For beds, borders and edgings the plant is very effective.

Mme. Melanie Soupert, H. T., is a beautiful variety of an orange salmon tint; has a long flower bud; and half opened it is extremely fine and graceful. The tint of the flower is most taking. As a mid-season and late, in frames, and the open ground, it is a rose that is becoming a universal favorite.

THE EFFECTS OF HARD FROSTS ON ROSES, ETC.

In the central region of Europe away from the sea coast the rule is still, in the winter season, to place some kind of protective materials over the roses of every

class. Even climbing varieties on walls and fences are protected with straw and mats, or they are unfastened, and the branches bundled-up in straw or dry fern treads and then laid on the soil and covered with tree leaves. In this manner the writer of this note was accustomed in Austria to protect his roses; and in no year from 1873-1880 was it an unnecessary work. Other plants besides roses had, for safety's sake, to be protected in the winter, viz., *Magnolia purpurea* and *M. Lenzii*, two deciduous kinds, the latter white inside, and deep purple on the outside of the flower, needed a thick covering of straw to be wrapped around them. The effect of such protected plants is rather bizarre to the stranger from milder climes, but seeing that in the generality of winters the snow covers everything from the end of the month of October till the first week of April, the eye gets accustomed to these white statues, and hillocks of tree leaves scattered about the garden and pleasure ground. The effects of winter cold vary unaccountably in Central Europe, and plants which escape injury one year, may be severely injured or totally destroyed in another, without apparent reason; and some striking cases of this fact are given in a recent issue of the *Gartenwelt* by a correspondent resident at Karlsruhe. A fine old *Calycanthus floridus*, which for many years in succession was covered with hundreds of its deliciously fragrant flowers, was last winter completely frozen, in so far as the ends of the shoots, and cryptomerias and rhododendrons in exposed positions, were similarly injured, some plants of the latter being killed. Further, the frost acted injuriously on young plants of *Ribes sanguinea* and *Taxus baccata*, the last named being killed; likewise a *Magnolia obovata* with the exception of one branch, although *M. macrophylla*, *M. parviflora*, *M. glauca*, *M. Yulan*, *M. tripetala*, etc., have not suffered in the least degree. The plants of the common Furze, *Ulex Europæus*, had to be cut back to the ground level, but they are now putting forth young growth. *Cercis Siliquastrum* and *Carpinus betulus* var. *quercifolia*, have the upper parts of the crown completely frozen; but all other fine species of shrubs and conifers have escaped damage, such as *Ceanothus Americanus*, *Zelkova Keaki*, *Exochorda grandiflora*, *Chionanthus virginica*, *Halimodendron argenteum*, *Cunninghamia chinensis*, *Cedrus Deodara*, *C. atlantica*, *C. atl. glauca* and *C. Manetti* and *Pinus Jeffreyi*, which in most districts must be more or less protected, are at Karlsruhe not protected at all. A correspondent resident at Schlachtensee near Berlin states that at that place there is scarcely a trace of injury from frost although no protection worth mentioning was afforded.

Of roses the chief sufferers are several of the newer Hybrid Teas. Unprotected the following roses are uninjured; the climbing varieties, *Aglaia*, *Ruga*, *Belle de Baltimore* and *Tausendschon*. The first named is a remarkable variety, and splendid for covering a veranda—the bud on opening of a canary yellow tint, changing later to white, and possessing a delicious Tea fragrance. The dwarf roses, *Frau Karl Druschki*, *W. Allen Richardson*, *Mlle. Francisca Kruger*, *Mme. Jules Grolez*, *Gloire de Dijon*, *Reine Marie Henriette*, *Grace Darling*, *Mme. Thibaut*, *Mme. Ravary*, *Yellow Kaiserin*, *Grossherzogin Alexandra*, *Clara Watson*, *Mme. Levavasseur*, *Annen Muller* and *Gruss an Teplitz* are flowering abundantly. Of shrubs plants of *Exochorda grandiflora*, and likewise *Rhododendron* are uninjured, and are flowering well. The first named has been unprotected for a period of eight years. Among Conifers several *Picea sikhensis* only, were killed by frost.

Andrueck Mowre

SOCIETY OF AMERICAN FLORISTS AND ORNAMENTAL HORTICULTURALISTS

Preliminary program of the Twenty-fifth Annual Meeting and Exhibition to be held at Cincinnati, Ohio, August 17th, 18th, 19th and 20th, 1909:

Preliminary Program.

TUESDAY, AUGUST 17, 1909. First Day—Opening Session.

1.30 P. M. Organ Concert.

2.00 P. M. President Valentine's address. Report of the Committee on President's Address. Discussion. Reports of Officers, Committees, etc. Miscellaneous Business. Judging of the Trade Exhibits.

8.00 P. M. President's Reception. President Valentine hopes to meet as many as can attend and wishes it distinctly understood that formal dress is not expected, but that the most comfortable costume will be the most appropriate.

WEDNESDAY, AUGUST 18, 1909. Second Day—Morning Session.

9.00 A. M. Organ Concert.

9.30 A. M. Illustrated Lecture, "The Value of the Recent Work in Heredity to the Practical Flower Breeder." By Jesse B. Norton, Washington, D. C. Discussion. Question Box.

11.00 A. M. Selection of Next Meeting Place. Polls Open One Hour. Nomination of Officers for 1910. Reports of Judges of Trade Exhibits. Annual Meeting Ladies' Society of American Florists.

Second Day—Afternoon Session.

2.00 P. M. Organ Concert.

2.30 P. M. "The National Flower Show—Past and Prospective" and Special Matters.

Second Day—Evening Session.

8.00 P. M. Illustrated Lecture—Color Photography. J. Horace McFarland, Harrisburg, Pa.

THURSDAY, AUGUST 19, 1909. Third Day—Morning Session.

9.00 A. M. Organ Concert.

9.30 A. M. Address—"Some Work of the U. S. Department of Agriculture as Affecting Floriculture." By B. T. Galloway, Washington, D. C. Discussion.

10.30 A. M. Election of Officers. Polls will remain open two hours.

Amendment to the By-Laws.—The following amendment having been submitted to the Executive Board and accepted by them, will be voted upon at this time:

Amending Article 4, Section 2, as amended previously at Niagara Falls in 1908, by striking out the figures \$25.00 in said article as above amended, and inserting in place thereof the figures \$50.00, meaning and intending to advance the fee for Life Membership from \$25.00 as now obtaining to \$50.00. The Question Box.

Third Day—Afternoon—No Session. Bowling Contest and Other Sports.

2.00 P. M. Meeting of the American Carnation Society.

2.45 P. M. Meeting of the American Rose Society.

3.30 P. M. Meeting of the National Sweet Pea Society.

4.30 P. M. Meeting of the Florists' Hail Association.

Third Day—Evening Session.

7.30 P. M. Organ Concert.

8.00 P. M. Paper—"The First Meeting of the Society." By the First Secretary, E. G. Hill. Address—"What the Society has Accomplished in Twenty-five Years." By J. C. Vaughan. Addresses by Past Presidents.

FRIDAY, AUGUST 20—Fourth Day. In the hands of the Cincinnati Florists' Society.

Transportation.

Applications for special rates have been refused by all the traffic associations. It is pointed out that special summer rates are in effect to all the large cities at very much reduced rates.

Chicago.—The Chicago delegation and all others desirous of joining them will leave Chicago August 16, afternoon or 12 p. m. midnight (it is as yet undecided which), via Monon R. R., by special train. Address: P. J. Foley, 26th street and Western avenue, Chairman of Transportation Committee, for full particulars.

New York.—The convention party will travel by N. Y. Central R. R. Address: John Young, Secretary, 51 W. 28th street, for full particulars.

Buffalo.—Address W. F. Kasting, 383 Ellicott street, Buffalo, for particulars.

St. Louis.—Address F. H. Meinhardt, 7041 Florissant avenue, St. Louis, State Vice-President, for particulars.

Kansas City.—Address W. L. Rock, 1116 Walnut street, Kansas City, State Vice-President, for full particulars.

Washington, D. C.—Address W. F. Gude, 1214 F street, Washington, D. C.

Trade Exhibition.

The trade exhibition will occupy two floors of the Music Hall. Abundant space is available and perhaps no more advantageous location has ever been at the disposal of the society for its exhibition.

This being the 25th meeting of the society and it being in so central and accessible a point as Cincinnati, all indications are for a record-breaking attendance and the value of an exhibit to those having horticultural products for sale can hardly be overestimated.

Growers of plants, seeds, bulbs, shrubs and trees, dealers in florists' supplies, greenhouse requisites, building material for greenhouse construction, heating apparatus, etc., can here meet the best buyers in the horticultural profession, and no better opportunity for directing attention to the special merits of their goods can be found.

N. B.—Exhibitors are reminded that the duties of the judges are limited to the consideration of and making of awards to Novelties and Improved Levees only. Exhibitors are required to make previous entry of all such exhibits with the superintendent in writing. Full rules and regulations, together with diagrams of the exhibition hall, may be obtained from William Murphy, Superintendent, 311 Main St., Cincinnati.

A Word From President Valentine.

To The Members of the S. A. F. and O. H.:

I hope each member of the society is not only planning to attend the coming convention in Cincinnati but that he is doing his best to secure a good delegation from his vicinity. Come yourself and bring your friends, whether they belong to the society or not. After you get them there call for help if necessary to induce them to join and we will furnish you spellbinders who will complete the work you have begun. Some one will be at Secretary Rudd's desk all the time with a welcome smile for the new member and a receipt for his money.

The Cincinnati contingent are taking great pride in the fact that their city has been selected as the place for the twenty-fifth convention and their plans show that they are bound all visitors shall have a good time. The hall for the meetings is a perfect gem of a tiny theatre. Nothing could be better for the purpose and space has been provided for the largest trade exhibit ever seen at one of our conventions.

The "Sports Committee" are wild to receive your entries. No matter whether you have a good bowling team or a poor one get into line with it and show how game you are. Denver is going to send five bum bowlers just to show that a little matter of three thousand miles round trip cannot keep her florists from getting into the game. Don't hold back and say it is too hot for that is a poor excuse for a man to make, when if he stays at home he will be wheeling out soil from a house where the mercury marks 120 degrees. The Cincinnati crowd promise you several occupations more pleasant than that.

No matter how small your business you simply cannot afford to stay away. Remember that the big fellow can go to visit good growers one by one if he prefers, but the chance for the small growers to pick up a few good points at small expense is at these conventions and then when you get there just look around and see how many of the big ones make money by doing the same thing.

Step to the telephone right now and ask a lot of the fellows to come down town tonight and talk it over and see if you cannot bring a good crowd with you.

Yours for a big convention,

J. A. VALENTINE, President.

Cincinnati Convention Notice.

To all florists who contemplate visiting Cincinnati during the Convention of the Society of American Florists and Ornamental Horticulturists, and who are not members of the National Society, it will be absolutely necessary upon your arrival in Cincinnati to go to the headquarters of the Cincinnati Florists' Society at the Sinton Hotel, Fourth and Vine streets, and register. You will then receive a ticket which will admit you to the Trade Exhibit at Horticultural Hall, where you will again register with the Secretary of

BURNET HOUSE

Cor. Third and Vine Streets
CINCINNATI, O.

One of the largest and best hotels in the city. Over 200 fine suites of rooms with private baths, and 150 rooms with hot and cold running water. All modern comforts and conveniences.

SPECIAL RATES TO THE FLORISTS as follows:

American Plan: \$2.50 per day and up.

European Plan: \$1.00 per day and up.

Make the BURNET headquarters for yourself and friends. You will have no cause to regret the choice.

We guarantee to please all florists who may favor the Burnet House.
Write for rooms or for further information.

T. J. CULLEN, = = Manager.

the Cincinnati Florists' Society, who will provide you with tickets, badges, etc., for the various entertainments.

ALBERT SUNDERBRUCH,
Secretary.

Hotels in Cincinnati Recommended by The Cincinnati Florists' Society.

The Sinton, European plan, \$1.50 per day and up.

The Grand, European plan, \$1.00 per day up. American plan, \$2.00 to \$3.00.

Gibson House, European plan, \$1.50 per day up.

The Havlin, European plan, \$1.50 per day and up.

Burnet House, American plan, \$3.00 per day.

St. Nicholas, European plan, \$1.50 per day and up.

Palace Hotel, European plan, \$1.00 and up; American, \$2.00 to \$3.50.

The Emery, Honing, Lackman, and Gerdes are \$1.00 a day and upwards; the Rand and the Stag are 75 cents and upwards and the Bristol and Hotel Thoma, 50 cents and upwards, all on the European plan. The Munro is \$1.25 and upwards, European plan, and the Alms \$3.00 on the American plan.

The New Orleans Vegetable Growers' and Shippers' Organization had a festival day on July 19, which included a procession with numerous halts en route, finally winding up at the establishment of J. Steckler Seed Co., where an elaborate lunch was served and a souvenir badge presented to each guest. The association dinner was served at Southern Park with John Parr as toastmaster. The trade connections which the association has established with the north are constantly broadening.

HORTICULTURAL SOCIETY OF LAKE FOREST.

Always a notable event, the annual exhibition of the Horticultural Society of Lake Forest, Ill., last week, was unusually so. It was held at Durand Art Institute, July 21st, and its patrons were the society folks of the famous north shore. They are largely people of wealth and the cut flowers, potted fruit trees, baskets of out-door blooms and choice plants and vegetables were from the conservatories and gardens of people who are not sparing time or money to produce the best. Their gardeners are encouraged in every way to put forth every effort to reach as near perfection in their art as possible.

Among the notable exhibitions was a collection of foliage and decorative plants, pear, peach, apricot, apple and fig trees in pots, by Mrs. A. B. Dick, which was awarded a gold medal. Her collection of crotons, fancy leaved caladiums and orchids is said to be the largest in the state. Mrs. C. H. McCormick had a collection of hardy flowers and ferns from her summer home at Walden. Mrs. Ernest Hamill had a fine collection of pansies and other flowers. Mrs. Byron A. Smith a rare collection of hardy plants, trees, shrubs, etc., from Brier Hall. Mrs. L. T. Swift vegetables and flowers from Westleigh. It would be impossible to enumerate all the displays, all of which are well worth while, did space permit. Emil Bollinger, organizer of the Horticultural Society of Lake Forest and its first president, is a hard and enthusiastic worker and deserves much credit for its success.

The only fault to be found with the exhibition is its brief duration, prac-

tically limited to one afternoon and evening. The proposition of making it hereafter a three days' event was discussed at the close of this show and the matter will be taken up again later when it will probably be definitely decided in favor of the extended time.

PHILADELPHIA FLORISTS' CLUB.

The regular monthly meeting of the Philadelphia Florists' Club will be held on Tuesday evening, August 3, at 8 p. m. There will be no formal paper at this meeting, the time being required for discussion of convention matters. The transportation committee will announce final decision as to route, fare and time with details. The sports and hotel committees will also report. As far as known at this writing the bowling team will consist of Messrs. Westcott, Anderson, Kift, Connor, Batchelor, and possibly Graham or Robertson. The latter two while competing in the trials are doubtful about going.

AMERICAN ROSE SOCIETY.

The preliminary schedule of the proposed classes and premiums for the exhibition to be held in New York City in March, 1910, has been received from Secretary Benjamin Hammond, and is good evidence that a big effort is to be made to make the show one of the highest merit and usefulness. There are a number of very large and tempting prizes for specimen rose plants in all classes and as it is already time for those who would like to compete to begin preparations we would advise all who are interested to send to Secretary Hammond for a copy of the schedule.

AMERICAN PEONY SOCIETY.

Report of Committee on Nomenclature.

It has been suggested that as one of the committee on nomenclature, sent by the American Peony Society to assist in the work among the peonies at the Cornell test plot this season, it would be well for me to give an account through the columns of Horticulture, of the work done and the condition of the peonies in the plot as we found them, for the benefit, not alone of the members of the society, but the large number of florists who are more or less interested in peonies and the work of the society. I am glad to do this, especially in view of the criticisms which have been made by some members of the society, which were voiced and made public in President Ward's letter, read to the society at its last meeting at Queens, N. Y. Mr. Ward, of course, has not seen the plot for two years, and his impression regarding the conditions at Cornell has been formed from hearsay and without being aware of the great improvement which has been brought about during the last year.

Unfavorable Conditions.

It might be well for me to mention the basis from which these criticisms have arisen in order to make it more clear that it was due to a few circumstances at the very beginning, which, while unfortunate in delaying the work, were unavoidable, and for which no one could justly be blamed. It must be admitted that the first results were disappointing, because the peonies were unfortunately planted at a location that was later on required by the college authorities for other purposes, making it necessary to move them to another place. This gave the plants a check from which they had not recovered when the meeting was held at Ithaca in 1907, and it was at once seen that it would require another year's growth before it would be possible to study the peonies properly. Members who came expecting to see a fine display of peonies in the field were disappointed. The ground was a very stiff heavy clay, which seemed as if it might be too wet, and many members expressed the opinion that peonies would not thrive there unless the field was thoroughly drained. This opinion seemed verified when the following year, 1908, after a cold wet spring, the majority of the plants still failed to show typical blooms.

In spite of all, the meeting in 1907 turned out to be a very interesting one, and the members went home full of enthusiasm and the conviction that the work was well on its way to a successful conclusion. We felt deeply

indebted to the University for the work it was doing for the society, to Prof. Craig for his co-operation and hospitality, and Dr. Coit for the thorough manner in which he had gathered together all of the known peony literature and laid the foundation for effective work, including the publication of the check-list, containing a list of all the names of the peonies catalogued at the present day, some 2700 in all, a large proportion of which were represented by the plants themselves in the test plot.

It was suggested that a new plot be planted, this time the object being to form a collection of only the very choicest varieties, each large grower being invited to send from 100 to 150 of what he would consider the very best varieties. This suggestion was carried out, and the following fall collections were sent in by a large number of growers, the new plantation being placed along side of the old one, but on ground lying a little higher.

Some Disappointments.

The meeting in 1908 turned out most unfortunately for the welfare of the society. President Ward was unable to be present; Prof. Craig was in Europe dangerously ill; Dr. Coit had accepted a permanent position in Arizona, and the work of the society was in charge of Leon D. Batchelor who had but recently taken charge having had scarcely time to become thoroughly conversant with the work in hand. The result was depressing and discouraging for the society, and the situation for Mr. Batchelor a most embarrassing one.

The peonies in the original plot again were not up to expectations, and it is scarcely to be wondered at that under the effect of so many depressing circumstances some of the members should become impatient and indulge in open criticism. For it seemed to many of us then that the University had lost its interest and that there was danger that the whole purpose of the experiment would fail.

Suggestions were made by some that the peonies be moved to a more favorable location, and by others that the old plot be abandoned and the work concentrated on the new plot. Fortunately neither of these suggestions was carried out, it being decided that it would be unfair to the original donors to fail to carry out the test along the lines originally planned.

A committee of three was appointed—C. W. Ward, S. G. Harris and myself—to devise ways and means of improving the conditions of the plot, and to confer with the college authorities on this subject. This committee met in Mr. Ward's office in New York and discussed the subject, with the result that Mr. Brown of the Cottage Gardens Co. acting for Mr. Ward, and myself were to send a letter to Prof. Craig after his return, conveying the suggestions we had to offer. This letter, however, was never sent, as in the meantime through correspondence with Mr. Batchelor we learned that practically everything it was our intention to suggest was already being carried out under the direction of Mr. Batchelor, the college authorities having given him full charge and power to do everything which in his judgment was required for the good of the peonies. Provision had been made for drainage, and over 80 loads of manure hauled on the plot. Any further action on our part was deemed unnecessary.

A Splendid Success This Year.

This year the peonies made a splendid showing. They are strong and healthy and with but few exceptions are full of typical blooms, which gave us a splendid opportunity to study them and make comparison. What is most surprising, the strongest plants and finest blooms are in the portion of the plot that came in for the greatest amount of criticism, that is the very lowest point in the field. Here some of the very choicest varieties are found, many of them from the collections received from Europe. Avalanche, Albatre, Mlle. Rosseau stood nearly

FLORAL DECORATIONS AT ALASKA-YUKON-PACIFIC EXPOSITION

Showing Bed of English Tufted Pansies (*Viola connata* Hybrids) with Background of Peonies.

shoulder high with immense blooms, which were a revelation to me. Great clumps of full double Martin Cahuzac, varieties which in our nurseries are never allowed to stand long enough to show us what they really are; the Lady Alexander Duff, sent by Thurlow, with its immense white blooms was particularly noticeable; all growing in the ground condemned the year before as being absolutely unfit to grow peonies in.

Another point which I took particular notice of was the fact that the colors of most of the varieties were especially strong and distinct, all of which goes to show that while it takes peonies longer to establish themselves in the heavy clay, the strong soil produces excellent results when they are finally underway. My only regret was that the other members of the society could not have seen them this year instead of last.

I wrote to Mr. Joseph Dauphin asking him if he had any suggestions regarding this report. I can not resist quoting the following from his letter in reply, dated July 16: "I have no suggestions to make, as I think whatever you say on the subject will be the same that I would say. For the general appearance of the plants, either as a whole or individually, I had no kick coming. The plants were strong and healthy, and flowers in as good shape and size as could be. Very few weeds, and the ground had been well cultivated. I am pretty well satisfied with the looks of the plot this year. I know the difference between that clay soil and our sandy loam at Long Island. They may on their lot sometimes be unable to cultivate or weed out, just on account of the weather. Not taking account of the mixture of varieties which was done by everybody I say the lot is O. K. And, moreover, I believe Mr. Batchelor is doing his very best in the case and I am sure will keep up.

"As regards drainage, what do they want to drain, pocket book or lot? Neither needs it, I think. There is, it is true, a low corner in the plot, where Goos & Koenemann's plants are but they seem to enjoy the spot. I wish you would in your report emphasize the pains Mr. Batchelor is taking in this work. My way of looking at the whole situation is not of censuring any one, but just the other thing—congratulations for the work done."

What Mr. Batchelor Has Done.

When we arrived we found Mr. Batchelor among the peonies with two competent assistants who were aiding him in tabulating descriptions of the varieties in bloom. A tent had been erected, and everything necessary for carrying on the work was right on the ground.

There are 1,933 numbers in the original plot, and to go over each of these one by one seemed like a hopeless task. The mix-up of varieties and names is appalling. I don't believe the members of the society begin to realize how bad it is; I am sure I did not. But there they were side by side all in bloom. And by the evidence we were all guilty. It is impossible to go into details, but here are a few illustrations; *Edulis Superba* appears under 24 different names, and I don't know how many got away. Nearly all the *l'Esper-*

BEDDING ROSE CLIO

in New Rose Garden in Minneapolis Park.

ence sent by American growers is *Edulis Superba*. The European growers sent the correct one, a fleshy white minutely powdered with lilac. *Duchess de Nemours* (Guerin), in every case proved to be *Edulis Superba*. *Modesta Guerin* and *Rosea Superba* proved to be the same; while *Gen. Bertrand* in many cases appeared under the name of *Modesta Guerin*.

Probably *Queen Victoria* or *Whitley* could lay claim to the greatest variety of names, unless perhaps among the reds with stamens, where the greatest confusion exists, *Delachii*, *Fulgida*, *Louis Van Houtte* and others being badly mixed. *Lady Bramwell*, long catalogued as a *Kelway* introduction, proves to be in every case identical with the old French variety, *Dr. Bretonneau* (Verdier), and so on.

The check list with its 2,700 names staggers one. But at the above rate, I believe it can be reduced to one-fifth that number by the process of elimination.

Naturally this thought will arise in the minds of many, How can the committee be sure they are able to say which is the correct variety among such confusion? At first it seemed impossible. But on getting down to work, strange to say, the very confusion in many cases brought about the natural solution of the problem. The positive identification of a variety in one place solved the question in a host of others, and as we advanced through the plot the work became clearer and clearer, from the simple fact of having all the evidence gathered together before our eyes.

It was a master-stroke on the part of Mr. Ward when he induced the most reliable European growers to send their collections over here. We have *Dessert's* complete collection, in addition to that of *Croux*, and *Paillet* of France, *Goos & Koenemann*, Germany,

Barr & Sons of London, and *DeGraaff Bros.* of Holland, this last collection being obtained through the efforts of Prof. Craig. These collections have proved to be a wonderful help in this work, without which I am convinced it would have been impossible for us to make much headway.

The Work Ahead.

The work naturally resolved itself into three parts: First, varieties which can be identified without much difficulty and which we were able to pass upon as being correct without much doubt; second, those varieties which for various reasons will require more study or regarding which we had no data to work upon; third, varieties with names of uncertain origin, that probably it will never be possible to identify, and which are of such doubtful value as not to be worth the time and effort necessary to establish their identification, even if it were possible.

Of the first group Mr. Batchelor writes that he thinks the list will number 275 varieties, descriptions of which will be published by the college during the coming winter. It is the intention to start a new plot wherein three plants of each of these 275 varieties will be planted to serve as a basis of comparison for future work and to show the members of the society the true variety so far as the committee is able to judge, subject to the correction of any errors which may be discovered before the official catalog is finished and permanently published.

The third class will be eliminated from further consideration, except as identification follows in the natural progress of the work, leaving only the varieties in the second class upon which the work of the committee will be concentrated next year.

Prof. Craig says that the University

has taken hold of this work, backed by the State of New York, and they will carry it to its final conclusion, even if the Peony Society should go out of existence. They have already spent over \$700 on the Bulletins printed for the society. Several acres are occupied by the peonies, the use of the land and its care being no small item.

Mr. Fewkes, secretary of the Society, in a letter just received writes as follows: "I think the society does not realize what is being done for it by Prof. Craig and his assistants, and what little experience I have had in such matters leads me to believe that the nomenclature business would soon be in the same condition in which the peony committee of the S. A. F. find their efforts, had it not been for Prof. Craig. I am glad the Society conferred honorary membership on Mr. Batchelor. And, when they come to realize the amount of work he is doing, I think they will be glad to honor him in any way that seems fit."

Prof. Whetzel gave me an interesting account of his experiments with club roots or nematodes as some call them. He has a choice collection of these growing in his garden for experimental purposes, and seems in a fair way to solve this problem.

In conclusion, I wish to say that it seems to me every florist who grows peonies commercially, and every amateur whose special hobby is peonies, will find it to their advantage to assist us, not only by joining the society, but by giving us the benefit of their observations. It is surprising how much the growers have learned individually during the last few years, many of the errors which stand forth so conspicuously in the Cornell plot having long since been corrected in the catalogues of the donors, but there is still plenty of work ahead.

BERTRAND H. FARR.

Reading, Pa.

ROYAL HORTICULTURAL SOCIETY.

The fortnightly meeting held July 20, although it followed so closely on that held at the Holland House, showed no exhaustion of the spirit of competition in plants beautiful and economically useful. Roses were there in greater beauty than on the earlier date, thanks to the improvement in the weather conditions of the last week, which have been quite delightful, and have perfected the blooms; Delphiniums have come along wonderfully, the flower spikes being unusually long and massive; Eremurus were very finely developed in the genial warmth. Carnations, florists' border varieties as well as the hybrid perpetuals, were very fine, only here and there among dark colored flowers showing signs of burning. Sweet peas were abundantly shown and of these charming flowers we seem to have got to the full extent of their possibilities in coloring and fine form. For about a month or two there arises a dearth of showy orchids at this season and not many were presented on this occasion and but few which could be termed striking in any particular.

Of fruits an extra fine collection of tomatoes was made by Messrs. Sutton & Sons, and of fan trained and cordon gooseberry trees; of peaches, nectarines and cherries in pots by J. Veitch & Sons.

Of orchids Sir Jeremiah Colman was awarded an award of merit for a plant in bloom of *Spathoglottis plicata alba*, the flower having a diameter of 2 inches surmounting a stem of 1 1-4 ft; and a Botanical Certificate for one of *Nephrolepis pulchrum* having a spike of white flowers on a short foot stalk, and leaves with dark marbling.

F. Sander & Sons exhibited a plant of *Odontoglossum ardentissima* "Starlight" having striking flowers 3 inches in diameter, white with a tinge of lilac

pervading the middle area of the petals and sepals, with purple spotting; Award of Merit. *Cattleya gigas Sanderiana* had a superb spike of blooms; *Laelio Cattleya Ophir* has a flower whose petals and sepals are of a rich yellow, and lip of a rosy yellow tint, traversed with crimson lines. It is the outcome of a cross of *Laelia xanthina* with *Cattleya aurea*. W. Bull & Sons showed some crosses of *Laelia xanthina* with *Cattleya Mossiae* with pale, rather unattractive flowers, which seen in large numbers on big old plants would not be without decorative value.

Wallace & Co. exhibited a dwarf growing lily, of the umbellatum type, and named Orange Queen, the blooms measuring 6 inches in the full spread of the petals.

Mr. J. Unwin had an extensive exhibit of sweet peas, of which worthy of mention were Ella Dyke, a good white flower; Gladys French, light blue; Elsie Herbert, pink and white, lavender sky blue; Sunproof, bright scarlet.

Mr. Smith, gardener to Mr. G. Ferguson, Weybridge, showed an extraordinary variety of Delphinium named Nulli Secundus, pure white with a mass of perfectly black stamens. The flowers are 2 1-2 inches in diameter and quite unique in appearance. The exhibitor has been engaged in crossing the genus for many years and he has succeeded in raising a number of fine varieties, but none equal to this one.

Messrs. Paul, Waltham Cross, were exhibitors of roses as cut blooms and plants. Novel were Graf In Icy Hardegg, a flower of the build of *Grus* an Teplitz, rosy crimson in color; Hugo Roller, white centre and cerise outer petals; Madame Maurice de Luze, a flower of beautiful shape, and in color deep rose pink; Madame Jules Grolez, old rose pink, and *Grus* an Sangerhausen, a flattish flower, in color a purplish crimson.

NURSERYMEN PULLING TOGETHER.

A paper read before the National Association of Nurserymen by J. H. Dayton, of Painesville, O.

We have been assured that there is never too much of a good thing, yet have sometimes thought that a reduction in the number of nurserymen might be a benefit to the trade. Yet when we consider the joys that flow into his life, how near he is to nature's heart, how calm, sweet and peaceful an existence he leads, how cares, worries and perplexities skip him by, the wonder is not that we have so few but that many more are not scorning the temptations to engage in some well organized, well conducted business with established customs, rules and regulations, and becoming a free lance in the tree world, where every man can be a law unto himself, and unlimited competition takes the place of organized effort.

It certainly is fine fun to chase the elusive woolly aphids to his lair with a swab of fish-oil, to bend the gentle swaying branch of the cherry or apple heavily laden with black or green aphids down into the depths of the pail of tobacco-juice, to listen to the wily tree buyer, as he calmly convinces you that the trees you thought were worth 15 cents on your grounds are in reality high at 7 1-2 cents, boxed and freight paid; to open the letter dated April 7th, saying: "Gentlemen—We have as yet received no notice of shipment of our trees, as per our order of the 5th. We call on heaven and earth to witness that everything else ordered the same date is in, that it is impossible to bill up a single order until your shipment is received, and eternal and everlasting ruin is our portion, unless your shipment reaches us at once." You grab your telephone, order the foreman to drop everything else and rush the shipment off. The next letter opened is from the same firm, ordering a long list of assorted stock to be shipped with their first order.

To judge from the letters published, the papers read at some of the fruit growers' and horticultural societies, the remarks made and laws introduced into some of our legislatures, the sole object of every nurseryman is to do up his customers, mislabel and kill as many of his trees as possible before shipment. The truth is, that outside of the few genuine mistakes that are bound to occur in any business, the swindling dealer or nurseryman is able to carry on his operations only by the ignorance or cupidity of the buyer, and the customer who will use as much brain work in buying nursery stock as his wife does in buying clothing for the kids will get what he buys and pays for. However well-established, our reputation seems to be for deeds that are dark, do you not think that a little honest striving together might eliminate some abuses, destroy some bad habits and set us a little nearer right in the eyes of the consumer?

We will all agree that taking into consideration the inevitable risk in growing and handling perishable stock, the experience and care that must be exercised to produce good stock, the capital that must be provided and locked up in growing blocks for from one to ten years or more, that the re-

turns are not and have not been at all commensurate, and that in any series of years, more stock leaves the actual grower's hands at an actual loss than at a profit. Whoever heard of a rich nurseryman who obtained his filthy lucre from the profits in growing stock? Who is to blame? Well, you and I, if we are honest about it, will shoulder the responsibility and acknowledge it is our own fault. We cannot figure to a certainty the cost of our products, as does the manufacturer, who is able to control conditions and to insure both his finished products and raw material, but can we not establish a table of values and fix a basis below which everyone will understand he is selling at a loss? Can we not educate ourselves as to the true value of our stock and the amount we must procure, if it is sold at a profit? In fact, do you not know that active, intelligent co-operation among nurserymen could be made to establish confidence among ourselves and in our dealings with the public?

Commerce is not war, and the good bargains benefit both parties. I understand the first fruit trust was organized in the Garden of Eden, with his Satanic Majesty as promoter. Perhaps the disastrous result of that speculation is one of the reasons why it seems almost an impossibility to secure active, honest co-operation amongst the growers of agricultural and nursery products.

I remember hearing Mr. Collingwood make a statement something like this: "If you should lock up seven farmers (he might have said nurserymen) in a room, give them a week to deliberate and their choice of coming out to pool their issues, buy and sell their products as one, directing one or two of their number to attend to their business as officers, or to be hung, there would be seven hangings on the seventh day."

Is not now a good time for concerted action in a common cause? Cannot we agree on some things that we know and acknowledge to be wrong? Eliminate and bury them so deep that their specters will never again trouble even the dreams of our trade. Cannot a few things that we all know would improve our business and put money in our pockets be adopted and lived up to by enough of our members to make them so essentially the rules of our trade that no one will think of breaking them?

What about price lists? Like some minister's texts, are they not often used only as a point of departure, only we run prices down while the Reverend is trying to elevate. What about the price list of steel or iron, or a thousand other manufacturers? In what other convention in the world could I step from the platform and receive such a variety of prices on what purported to be the same article, and on what other commodity would there be such a diversity in grade or value when delivery was made?

If you knew nothing about our business, and was made a trustee of some institution, who desired a bill of trees for their grounds, and you made up a list and asked prices, and received bids offering exactly the same lot of stock at from \$318 to \$675 and every offer from a reliable house, long in the business, well quoted in commercial reports and capable of filling their contracts, what would you think of the business sense and sagacity of the organized nurserymen?

(To be continued)

Seed Trade

Seed Trade Latitude.

"Eastern seed dealers are fast losing their supremacy in the seed business of the country," said C. N. Page, president of the Iowa Seed Company, who has just returned from a two weeks' visit in the east. "It was but a few years ago when the east had all the seed business," continued Mr. Page, "but the west is now taking the rank which it should have in this line of business."—Des Moines, Ia., News.

There are houses in the seed trade that stand so high that they do not only a continental but a world-wide business. Many more cover the whole United States. Still more numerous are those who operate in given sections—as the New England, the Middle Atlantic states, the north west, the west, the south, etc. But the great majority of houses cater to a distinctly local trade—mostly within a radius of a hundred miles of some populous center. The latter class has naturally been increasing wherever the growth of population has been most manifest. This is not a case of "supremacy," or lack of it, for the East or West; but merely a case of healthy and natural evolution. Wherever a good local concern establishes itself, it ought to get a great deal of the business that would otherwise go further afield. But much of this is new business, and with population increasing elsewhere there is plenty of business for all—including the big continental-houses. What the latter lose in one direction they gain in another. To talk about "supremacy" of one section over another, as Mr. Page is reported to have done, is as incorrect as it is misleading. That rivalry in well-doing (the giving of agriculture and horticulture the best quality of seeds that brains, energy and capital can produce) of one section with another should ever cease, would be a calamity to the welfare of the whole country—aye, even the whole world. The "supremacy" of one section over another—or in other words the "monopoly" of the trade of one section by any other agency than "quality" would be the most disastrous thing that could happen to the citizens of any community. But, happily, such is impossible; climatic conditions form the bulwark; as the best quality in any given item has usually to be sought for at points thousands of miles apart. So in reality there is no such thing as "supremacy" in the sense meant by Mr. Page. "Supremacy in quality," on the other hand, knows neither latitude nor longitude. It was a "wild and wooly" remark, and one can only hope that Mr. Page was incorrectly reported. G. C. WATSON.

A Short Crop of Peas and Beans.

There is no longer any doubt that we are again slated for a short crop of peas. The only question now is, what will be the extent of the shortage? Several reports from trustworthy sources are to the effect that the shortage will be as severe as last year, and particularly on early sorts. This is most unfortunate for the growers, as the repeated shortages have so disappointed and disgusted the farmers that they are practically in a state of revolt against growing peas and beans, for while beans have not reached the stage of maturity that peas have, the conditions affecting them are very bad, and that there will be a heavy short-

GIANT PRIZE PANSY SEED

Our Giant Strain of Pansies should not be compared with the ordinary Giant Grimardeau, as the seed we offer will produce flowers of much heavier texture.

Write for our Midsummer Wholesale Catalogue.

Henry F. Mitchell Co., 1018 Market St., Philadelphia, Pa.

age is the practically unanimous opinion of everyone familiar with the situation. The writer saw a letter from one of the most prominent growers, stating as a fact that beans which had been in the ground nearly four weeks had not even sprouted. Of course, the recent rains will probably start germination, but such a crop is a forlorn hope at best, as it would be a race with Jack Frost in which the latter would rule favorite at 100 to 1. There is practically no chance of such a crop maturing seed, and all indications are that beans will rule much firmer and higher than last year.

As usual the heaviest shortage in peas will be in the canners' varieties and the Dwarfs. Rains of the past ten days will be of benefit to many of the late varieties which had then just come into blossom. They will also indirectly aid many of the medium early sorts by arresting further deterioration, but with reference to first and second earlies, the crop is made and quite beyond help. It only remains to ascertain what has been saved.

Several authorities estimate the yields of Alaskas, Extra Earlies, American Wonders, Notts' Excelsior, Gems, Gradus, Laxton and others of this class at 2 1/2 to 3 fold. Later varieties are expected to average half to one fold better. Canada Field will be very short again.

California Seed Crops.

With reference to California crops, sweet peas will be fair to good. Lettuce excepting a few varieties promises well. There will be enough onion seed to satisfy the cravings for this odorous but popular vegetable, and no famine prices are likely. The whites and flat reds will be a little on the short side, but not enough to cause alarm. Radish will be a fair crop and as for beets and carrots, California's quota in the grand total is not a very important factor. As to Lima, and other varieties of seed beans grown in California, conditions are as a rule distinctly favorable. Reports all say the stand is much better than a year ago, though as has been more than once pointed out in these columns, no crop of either peas or beans is actually safe until housed. On more than one occasion, both in California as in the East, a fine crop has been ruined by rain at harvest. Actual conditions at time of writing is all that can be given, and this should be borne in mind.

About Vine Seeds.

Vine seeds are generally promising at this date, and in the West, sugar corn is looking well. The outlook in the East is not so good, but not quite

hopeless. This is a fair summary of the leading stocks at this time.

Notes.

Percy Milks of E. Randolph, N. Y., has taken a position with the Randolph Seed Co., Louisville, Ky.

Kansas City, Mo.—Heller & Co. have opened a branch store for the sale of their nice proof seed cases, store fixtures, etc.

Webb City, Mo.—The seed store of the Tucker Seed Co., has been closed for the summer but will be opened again in the early fall.

The law suits between C. P. Braslan, of The Braslan Seed Growers Co. San Jose, and The A. G. Pieters Seed Co. Hollister, Cal., have been compromised and settled out of court.

It is hoped that Mr. F. W. Bruggerhoff will return with health fully restored. His popularity has vastly increased in these later years and he may be called "The Grand Old Man of the Seed Trade."

The recent sad death of Mr. C. W. Smith of the Leonard Seed Co. will be greatly regretted by all who knew him. He was a very bright and capable young man, quiet, refined and very companionable, and his death from any point of view is a public calamity. He was drowned while bathing at Chicago Beach, Chicago, and at last reports his body had not been recovered.

J. F. Noll & Co., Newark, N. J., have incorporated for \$100,000. Names of officers and directors have not yet been published. Something interesting is likely to be heard from this quarter in the near future. There is a broad foundation here for the building up of a splendid seed business, and this is likely to be done. Great credit is due Mrs. Noll, who, with the assistance of her late husband's brother has carried on the business since the death of the former eighteen months ago, with conspicuous ability and success, showing a gratifying increase over the previous year.

CHICAGO NOTES.

Personal.

Peter Scrozynski left on Monday for a trip around the Great Lakes.

C. C. Pollworth and wife, of Milwaukee, have been spending a few days in Chicago.

Geo. Weiland's new store on North Clark street, near Belmont avenue, is ready for business.

Julius Roehrs, Jr., is in Chicago with a superb collection of plants for the Lake Forest exhibit.

J. M. Clark, of the Leonard Seed Co., has returned from a trip through Michigan and Wisconsin.

C. M. Dickinson, manager for the E. H. Hunt Co., has returned from a two weeks' stay at Pelican Lake.

Of the Wittbold force, Mike Pontrich is at Louisville, Ky.; A. Stenquist and E. Doetch are also enjoying vacations.

H. Philpott, of Winnipeg, left Sunday for Toronto and will return to join the Chicago florists in their special car to Cincinnati.

John Fuhrman, 1651 North Clark street, is building a new store, flat and conservatory. He has taken his stock into temporary quarters.

O. P. Bassett, C. L. Washburn and E. B. Bassett started from Chicago July 27, for a thousand-mile auto trip, going as far as Minnesota by one route and returning by another. They will be back in time for C. L. Washburn to go with the party to Cincinnati.

The body of C. W. Smith, whose sad drowning was recorded in last weeks' issue, is still somewhere in the embrace of the lake. Every effort possible has been made to recover it, without success.

His brother, Albert Smith, with whom he was bathing when he lost his life, is inconsolable. He will not abandon the search and has had professional divers, the life saving crew and the police force to help him. Cannonading has also proved futile. Mr. Smith has the sympathy of the trade in his long days of unusual trial.

ST. LOUIS PERSONALS.

Mr. and Mrs. Carl Beyer have returned from a pleasant trip through the western country.

A. Y. Ellison, of The Ellison Floral Co., was married last week in Belleville, Ill., to Miss L. Hastings of Chicago.

Mr. and Mrs. Hugo Gross of Kirkwood have returned home after an enjoyable trip to California and other western states.

George Waldbart sailed from New York on July 28 for an extended trip through Europe. He will return about October 1st.

Des Plaines, Ill.—H. C. Bluett, who makes a specialty of sweet peas under glass, reports returns this year lower than those of previous years and that the cause is overproduction. Des Plaines is becoming quite a greenhouse centre. With the completion of the Hoerber Bros' range of ten three hundred-foot houses there will be nine distinct greenhouse plants in this little town of 2000 inhabitants.

PHILADELPHIA NOTES.

A painful incident occurred in local wholesale circles last week. William J. Baker took a vacation. At latest accounts the patient was resting easily, and had increased his avoirdupois by nearly two pounds.

It is understood that the third annual meeting of the Association of Railroad Gardeners, scheduled for August 24th, will take place at Horticultural Hall, commencing at 10 a. m. Paul Huebner of the Reading is an active spirit in the local arrangements.

The first chrysanthemums of the season arrived at Pennock-Meehan Co.'s, July 21st. They were quickly picked up by an enterprising retailer. A small lot—only four of them; thank heaven there's no more of them—for a couple of months at least. We have trouble enough without 'mums at present.

The time table is the center of interest at present. Flower price lists are bald and weary narratives for the time being. The transportation companies are standing to their guns with grim courage. Won't give a point to anybody even under the most heart-rending circumstances. Haughty tyrants!

The Leo Niessen Co. were strong on sweet peas last week, and naturally objected to our market report, which mentioned these as generally very poor. Which was true. We are glad to hear there was at least one oasis in the desert. Leo should talk before—not after—the event. Mind telepathy is not yet an exact science.

Charlotte, N. C.—The Dilworth Floral Gardens have been sold to C. E. Scholtz.

Baker City, Ore.—Ira B. Sturgis has purchased the greenhouse business of R. C. Eisele.

New Orleans, La.—J. Shackei will transfer his business from Bayou St. John, to the lot he has recently purchased in the suburbs.

Fairhaven, Mass.—S. S. Peckham has turned his place over to Peter Davis & Son, who will make a specialty of carnations and chrysanthemums.

Mt. Vernon, Ia.—Alex. Cowen & Son have purchased the greenhouses of C. S. Meek and will carry on the business, making additions and improvements.

St. Louis, Mo.—C. Young & Sons Co., are making many improvements in their store, including a plate glass front. At a recent stockholders' meeting officers were chosen as follows: James Young, president; Harry Young, vice-pres.; Wm. C. Young, secy.; C. C. Young, treas.

Flower Market Reports.

BOSTON Ordinary summer trade conditions prevail in this market with possibly a more tardy arrival than usual of the special demand peculiar to the vacation season in the New England seaside and mountain resorts. Newport has shown but little activity thus far and Bar Harbor has just begun to wake up and whether the season is to be a good one, florally, is not yet apparent. The only goods that sell as yet are Kaiserin, Carnot and Beauty roses in limited quantity. Other things move very slowly. Asters are already loaded up in unmanageable surplus, quality good for the season. Sweet peas have never been so fine but they are heavily overdone and tens of thousands of bunches are turned over to the street fakir at prices that mean the minus sign to the grower. Gladioli have not yet put in their appearance here.

The heavy supply that **BUFFALO** has been coming into this market for the past month has ceased, especially in the carnation line, and now there are hardly enough to be had to fill the few small orders which are received. Asters are improving daily; the three days' rain helped considerable but came rather late to help the early crop. Some excellent stock has been had but not enough at the right time. There has been no heavy demand for Beauties, though they are of good quality. Other roses were in fair supply and sold readily. Sweet peas and lily of the valley were in better demand than in weeks previous. Plenty of greens of all kinds.

No startling change has **CHICAGO** taken place in the market, yet there is a general tendency toward better business. Flowers are more in demand and with the coming of asters the poor quality of the carnations is not so much felt. Some very good asters are now coming in with stems averaging fourteen inches and an occasional bunch is seen much longer. Sweet peas are nothing extra and the demand is not heavy. During the past week there have been at least two days in which trade was lively enough to suit almost anyone, and it looks now as if the summer dull season would not be prolonged this year. Traveling salesmen bring in good reports from outside also.

There are some **INDIANAPOLIS** few good roses on the market; the demand is seasonable, no more. The supply of Beauties has decreased and the quality with most of the growers has retrograded. Carnations are giving way to asters which have not yet arrived. Among the best flowers obtainable at the present time are Easter lilies and auratums, Shasta daisies, gladioli, Beauties and Killarney roses. Greens are quiet. There is enough of everything and no special activity in the demand.

Our hearts are **PHILADELPHIA** light, our skies are sunny; the deep cerulean of the heavens is as blue as the heavenliest blue ever; the fleecy whiteness of the transient clouds

rivals the driven snow; and half our population is off on tip-toe with ribbons a-flying to sniff for a week or two the balmy breezes and get that annual tuning up which is so conducive to sprightly service at desk or bench when the season starts in again in good earnest. May they all have a good time. The market ranks are very thin, indeed, but there are enough of the faithful left to fill the daily orders without undue exertion. Business is about as good as could reasonably be expected for the season, and there is little change to be noted over the details of our last week's report. Anything really good sells well. Early asters are now beginning to look like the real thing, and sweet peas have taken on a little spurt since the recent rains; but the hey-day of the outdoor crop is about over. Some excellent Kaiserin and Maryland roses are arriving. American Beauty is also good, clean stock, and very well colored. Lily of the valley supplies have been rather jumpy—plenty one day and not enough the next. The scarcity was especially pronounced towards the end of the week. Lots of orchids around with only fair demand. The fancy grades

of gladioli are scarce, but there are carloads of the ordinary.

Field Grown Carnation Plants

On account of general scarcity caused by the dry weather we advise early booking. Send to us for your requirements. We can furnish the very best the season affords.

DETROIT NOTES.

Chas. H. Plumb's new range of houses will almost double his capacity.

Robert Watson is erecting a new office and refrigerator at his place on Townsend avenue.

John Breitmeyer's Sons' two new houses, each 50 x 250, have been planted with Beauties.

A good deal of convention talk is being heard. Undoubtedly a large contingent from this city will appear there.

J. F. Sullivan had a narrow escape from being burned out. Fire started Sunday afternoon in the third story of the building in which his store is located. Fortunately, only the two upper stories were gutted and Sullivan's damage was very slight, mostly from water.

John T. Withers, Jersey City, N. J., is making an extended western tour which will include the convention of the park superintendents at Seattle and of the S. A. F. at Cincinnati.

DETROIT FLORIST CLUB.

M. Bloy gave a very interesting talk at the last meeting describing his first year's experience among us. As he was guilty of the crime of holding a 5c. plant sale at his establishment he was closely interrogated on that score. The discussion which followed established the interesting fact that a cheap plant sale has its good purpose in a large city. It may cause some little annoyance to show the customer the difference, but there are many among us who are anxious to plant flowers but cannot afford the big price. On the other hand, those who buy cheap plants solely because they are penurious will have a lesson taught them which will benefit the trade.

FRANK DANZER.

Manchester, Mass.—Mrs. W. Scott Fitz is having her greenhouses on School street moved to her estate on the neck where they will be again set up.

FLOWER MARKET REPORTS.

(Continued from page 115)

The market is very quiet. Roses are in lighter supply with the exception of Beauties, which are very plentiful on some days and prices fluctuate considerably. Carnation shipments are light. The price of lilies has advanced in consequence of a reduced cut. There are plenty of lily of the valley, orchids and gardenias for the demand. Asters are plentiful but not of very good quality. The usual summer crop of gladioli is coming in and prices rule low. The requirements of the best stores are easily satisfied, for they carry little stock.

Toledo, O.—A severe hail storm on July 15 did serious damage to gardens and glass. Ernest Glauser, Chas. Counter, E. A. Kuhnke, G. N. Keller were among the florists who lost heavily.

Buyer's Directory and Ready Reference Guide

Advertisements under this head, one cent a word. Initials count as words.

Display advertisers in this issue are also listed under this classification without charge. Reference to List of Advertisers will indicate the respective pages.

Buyers failing to find what they want in this list will confer a favor by writing us and we will try to put them in communication with reliable dealers.

Obituary.

Thomas C. Thurlow.

Thomas Chase Thurlow, widely known as a nurseryman, passed away at his home in West Newbury, Mass., on Wednesday afternoon, July 21. Mr. Thurlow had been confined to his room for about a month and although he did not have to take to his bed until last Sunday, he had been growing weaker everyday, suffering from his old affliction, asthma, which finally caused his death.

T. C. Thurlow was born in West

THOMAS C. THURLOW

Newbury, Dec. 30, 1832. His father was a nurseryman, and after traveling in the west for a year, Mr. Thurlow, in 1858, enlarged the nursery which his father had established and started another nearby. He was married in 1879 to Mrs. S. K. H. Dean, who, with three sons and one daughter, survives him. During the last few years Mr. Thurlow's sons have been associated with him in business. He was a member of the Massachusetts Horticultural Society, American Pomological Society and American Peony Society.

At the exhibitions in Boston the products of Cherry Hill Nurseries have been for many years famous, peonies, azaleas, phloxes, etc., being among the specialties exhibited and many valuable trophies have borne testimony to the high character of the material produced at Cherry Hill.

Mr. Thurlow was an ardent lover of nature, a kindly mannered gentleman, upright, sincere and true in all his dealings with his fellow man and held in a rare degree the love and re-

spect of neighbors and business associates. He was a worthy representative of the good old New England stock from which he descended.

Amos Reynolds.

The Connecticut Horticultural Society has just suffered the loss of one of its most valued and honored members, Amos Reynolds, whose death occurred in Hartford on the 24th instant. Mr. Reynolds had been employed for many years on the beautiful estate of James J. Goodwin, of which the president of the society, John F. Huss, is the superintending horticulturist. The kindly, genial, companionable spirit of our deceased brother, and the benefit of his ripened experience in things pertaining to horticulture, will long be missed in the councils of our organization. The Connecticut Horticultural Society was represented among the bearers at the funeral, by President Huss and John J. Dimon.

GEORGE W. SMITH, Sec.

Wilhelm Richter.

Wilhelm Richter, Hameln on the Waser, a veteran raiser of varieties of the potato, died on July 8, on his return journey from the Agricultural Exhibition at Leipzig, aged 76 years. The firm will be carried on as heretofore by C. Gebhardt, for many years the seed raiser in the employ of the deceased.

Nicholas Beirie.

Nicholas Beirie, a florist who has been in the employ of Nanz & Neuner for thirty years, died on July 22, at his home in St. Matthews, Ky., at the age of 80. He was a native of Germany. Three daughters and two sons survive him.

Thomas Parrow.

Thomas Parrow, gardener of the Middlesex county court house grounds at East Cambridge, Mass., fell dead while at work there July 24. He was 52 years of age.

FUNERAL OF JOHN THORPE.

Following the simple services of song and prayer, W. N. Rudd arose and voiced a beautiful and impressive tribute to the departed, of whom he said, "This man was my friend." He spoke of Mr. Thorpe as a genius, likening him to a plant whose side branches had all been removed allowing all the strength to develop the head "therefore he had no ability to accumulate the dollars, no ability to acquire palaces, but his genius was all for the development of the plants he loved." He spoke of the little carnations of the past and of Mr. Thorpe as having been the first one to see the future of that flower, closing the sentence with "Mr. Thorpe is the father of the carnation, and the men laying up fortunes now from this flower owe it to John Thorpe." He then spoke in about

the same way of what Mr. Thorpe had done for the chrysanthemum, and said, "His golden dreams have been conveyed into dollars by others; he left none himself, but he was a great man." He closed by expressing regret that John Thorpe had been allowed to pass away without some one having written down the knowledge of many things that would now be gone and blamed himself that he had not undertaken it for, "he was my friend." It was very impressive, indeed and following the other part of the service was especially so.

Immediately after Mr. Rudd finished, a little elderly lady, beautifully dressed, surprised us all by rising and saying she too wanted to say something. Mr. Thorpe had not only known every little leaf, twig and flower, but had been willing to patiently explain it to others. She had known him at the time of the World's Fair and ever since at the flower shows, etc. Her name is Mary Chew Hopkins, oldest D. A. R. now living.

The pall bearers selected were: J. C. Vaughan, W. N. Rudd, F. F. Bentley, J. Kidwell, E. Kanst, Geo. Woodward.

Among the floral offerings was a large wreath on base from the S. A. F., and a smaller wreath from the Chicago Florists' Club. The casket was covered with flowers when it was taken from the house.

The remains were cremated at 7 a. m., Wednesday, July 21st, at Oak Woods Cemetery. What is regarded as an excellent cast of his features was made on Monday.

STANDARD FLOWER POTS

THE GERMAN ROSE AMATEURS' SOCIETY.

The 24th congress of the Rose Amateurs' Society took place at Sangerhausen in the Hartz country in connection with an exhibition of roses on June 27, last. The locality was the Schutzenhause (rifle club pavillion), and the attendance of the local members of the society was of moderate extent, Burgomaster Knobloch, and his municipal colleagues taking part in the discussions, a sign of true gratitude for the opportunity the society afforded of holding a rose show in its Rosery, which every big town in Thuringia might with good reason be envious about. According to the report of proceedings of the society, read by the manager, Herr Peter Lambert, nurseryman at Treves, we learn that excluding those members who had not paid their subscriptions, in particular those who are foreigners, the members had been reduced by 15 per cent. The funds of the society were satisfactory, the balance on hand being 3,655.99 mk.; but the interest of the foreign members in the well-being of the society leaves much to be desired. The diploma of the society was awarded last year to Herr Hermann Kiese, Vieselbach, for his novelty Leuchtefeuer, a hybrid of Gruss an Teplitz; and the report expressed great satisfaction with the increase in the value of the prizes awarded in 1908 at Leipzig, which were carried out and retained by the members, a tendency in the prize money awarded that will have to be reckoned with in the future. The president of the society has compiled a list of 300 varieties of the best roses, including novelties which have been under tests. The list is to be put into book form, and sent to the members, who will be invited to send the president their opinions and observations; and when necessary, cancelling varieties, or supplementing descriptions. Mention was made of an intended formation of a Rosery at Britz, near Berlin, and in the Thiergarten at Berlin, in which 10,000 roses have already been planted out.

At Metersen in Holstein, a rose show will be held on September 10-12, this year, and at which no prizes will be awarded. The societies at Zabern in Alsace, and Munich, Gladbach, notify their readiness to test novelties in roses free of expense, in their rosaries at those places. An invitation has been received by the society to hold its exhibition at Liegnitz, in 1910, and it was generally accepted.

FREDERICK MOORE.

FOREIGN NOTES.

Herr Rudolf Mann, son of the founder of the firm of Otto Mann, nurseryman and seedsman, at Leipzig, Eutritzsch, will enter the firm as partner, while Paul Mann retires from reason of ill health.

The Limited Liability Co., J. A. John, of Ilversghoven, Erfurt, which is engaged in the business of window, balcony and porch decoration, are about to bring out an illustrated book entitled, "Anleitung zur Schmuckung der Hauser mit Blumen."

During Recess

GARDENERS' AND FLORISTS' CLUB OF BOSTON.

Randolph Grove, the scene of many merry gatherings, never sheltered a happier party than that of Wednesday, July 28, 1909, when the Gardeners' and Florists' Club of Boston enjoyed their annual picnic. Judging by numbers, it was essentially a ladies' and children's day, for the little ones fairly swarmed and there could be no doubt that they were having the time of their lives.

A list of sporting events had been prepared, as noted in our issue of last week, comprising twenty-two contests. These were all except one pulled off without a hitch and one additional—Boys' handicap race—was added. Peter Miller with the starting pistol, Mr. Kennedy with the megaphone, and other officials put everything through in good time and excellent order and are entitled to much credit for their efficiency. The games and prize winners were as follows:

Base ball for boys, won by Ferguson's team, 11 to 8. Base ball, commercial versus private growers, umpire, J. L. Miller, scorer, Cahill, won by the private gardeners, under R. W. Curtis, 8 to 4. Putting shot, John Reed, W. J. Collins, A. G. Sawyer. Flag race for girls, Alice Iliffe, Catherine Lalley. Three legged race, W. J. Collins and J. Reed, G. H. Grey and Wm. Iliffe. 50-yard race for boys, Thos. Iliffe, Victor Huerlin. Married ladies' race, Mrs. Rose, Mrs. H. F. Woods. Boys' three-legged race, Jack Sisson and T. Westwood, C. Ferguson and V. Huerlin. 50-yard race for girls, Edith Iliffe, Marjorie Iliffe. Sack race, W. J. Collins and W. C. Grassie. Hoop race, Mrs. J. F. Flood, Miss Jean Westwood, Mrs. W. N. Craig. Quoits, A. K. Rogers, W. C. Rust. 100-yard race, W. J. Collins, Wm. Iliffe. High jump, W. C. Grassie, H. G. Baldwin, A. G. Sawyer. Flag race, Mrs. G. H. Cray, Mrs. Rose. Fat men's race, J. L. Smith, J. Lalley. Running broad jump, W. J. Collins, G. H. Grey, C. Linsurt. Half-mile race, W. C. Grassie. Race for girls under 8, Bessie Ferguson, Eliz. Decker. Race for boys under 8, Spencer Heurlin. Boys' handicap, Dean French, W. Ferguson. Tug of war; this was the crowning event of the day and was fiercely fought between the commercial and the private men, the commercials coming out victors for the first time in a number of years.

ST. LOUIS FLORIST CLUB.

The great event of the year among florists, the local club's sixteenth annual picnic, took place on July 21st at Romona Park. The day was fine and the crowd was one of the largest that ever attended our club picnic. Our suburban florists especially must be commented on. They came in full force and brought their families with them. Much credit is also due the trustees and their assistants, who had the management of it. A fine band of music played all day and the dance hall was always filled with young folks. A fine lake furnished boating and fishing.

At 1 o'clock Chairman Ostertag announced that the first event was the ball game between employees of Bentzen Floral Co. and C. Young & Sons' Co. The Bentzen team had an easy time. They defeated the Young's team by a score of 23 to 1. During the ball game other events were pulled off, viz.:

Fat man's race; winner, J. J. Beneke, followed by Fred Foster and H. Niemeyer. Girls' race, Miss D. Ostertag. Boys' race, Adolph Steidle. Ladies' egg and spoon race, Mrs. Lulu Bremer. Hop, step and jump, Fred Alvers, this being his third year as winner in this class. Young ladies' race, Alice Jablonsky. Boys' race, L. Schutte. Ladies' ball throwing contest, Miss Hartman. Guessing contest, Miss L. Cronin. Eating contest for boys, James Addin. Jumping, Fred Alvers. Flower pot breaking game for ladies, Mrs. M. M. Ayers. Weight throwing, J. J. Beneke. Throwing contest for babies, all competitors being declared winners. 100-yard dash, J. Rattermann.

After supper the prize waltzing was announced and fifteen couples competed, entry being limited to those in the trade. F. H. Weber, Frank Weber and Herman Weber were appointed as judges. First prize, a \$25.00 bracelet, was awarded to Mr. and Mrs. A. Jablonsky; second, a \$15.00 umbrella to Fred Foster and Miss May Burns; third, a \$10.00 parasol to Eddie Gerlach and Miss Rose Winder. The universal verdict was that this was the best outing the club had ever enjoyed.

CHICAGO FLORISTS' CLUB.

The Chicago Florists' Club gave their annual picnic on Thursday, July 22nd and everyone in attendance had a good time. Although the weather was threatening the attendance was good. All the old-timers entered into the games with their usual zest, a noticeable fact being the eligibility of some to the fat men's race who had never been so before. Time tells on the florist as on others and on these festive occasions hard facts are not to be concealed—they are all getting older and fatter. The greatest interest centered in the baseball game between the wholesalers and the retailers, the latter winning the game and the former winning the sympathy of the lookers on.

Mr. Wolff and Mr. Boness in fat men's race, Mr. La Berg and A. Eberling in 100-yard dash, A. Eberling and Mr. La Berg in sack race, L. Gannon and L. Koropp in pie-eating, Mrs. F. Mulliman and Mrs. A. Bentley in married ladies' race, A. Zeck and H. Young in young ladies' race, L. Koropp and H. Bruns, boys under 16, M. Suther-

land and M. Koropp, girls under 16, H. Bruns and F. Yarnell, boys under 12, M. Koropp and K. Yarnell, girls under 12, N. Turoo and T. Yarnell, boys under 6, L. Gannon and L. Koropp, girls under 6, all were enriched by the award of various articles of use or ornament in recognition of their athletic proficiency.

MINNEAPOLIS VS. ST. PAUL.

Bowling scores of tournament of Minnesota State Florists Association:

Individual scores, two games—O. J. Olson, 389; L. Hermes, 361; Wm. Swanson, 309; Carl L. Melby, 291; E. Meyer, 283.

O. J. Olson won the prize for the greatest number of spares in two games. L. Hermes won the prize for the greatest number of strikes in two games.

Ladies' bowling, two games—Miss Freda Ostehout, 171; Miss Elsie Will, 140; Mrs. Wm. Strehlow, 134; Miss G. Distel, 119.

The prize for each member of the winning team was a stick pin valued at \$3.50.

"Dear Commodore, sit down and take it easy for the rest of your natural life!" We can imagine some such hearty and sensible remark by Miss Annie May of Summit, N. J., when she presented John Westcott with a new chair for his own private and particular use, at the Barnegat bungalow recently.

CLUB AND SOCIETY NOTES.

The Chicago Florists' Club is trying to raise money for a club house.

The Indiana State Horticultural Society will convene at Centerville on August 4 and 5.

The Southampton Horticultural Society (N. Y.) set ahead the date of the annual show to July 28, 29.

The annual and perennial show of the Lenox Horticultural Society (Mass.) has been postponed to August 11, on account of the backward season.

September 30 has been announced as the date of the automobile floral parade in Washington, D. C., and the judges have been appointed as follows: Mrs. Taft, wife of the President; Secretary of War Dickinson, Commissioner Macfarland, Governor Crothers of Maryland and Governor Swanson of Virginia.

The Grand River Valley Horticultural Society met at Grand Rapids, Mich., on July 20, and discussed the subject of marketing fruits. W. Molloy stated that selection of variety and care of trees might bring no result unless scientific packing and marketing was done. O. W. Braman and F. W. Fuller also spoke.

The executive board of the St. Louis Horticultural Society has issued a new preliminary list in which they state that they will in connection with the show have a fruit display and that the show will be held in the New Coliseum Building. Otto Koenig as usual will have charge of the show, assisted by Fred H. Meinhardt.

The Rhode Island Gardeners' and Florists' Club were the guests of James Hockey at Pawtucket on July 19, the date of their regular meeting. The party arrived about 4 o'clock. Business was quickly disposed of; then followed lunch on the lawn and a visit to the extensive greenhouses. A hearty vote of thanks was accorded the host for his hospitality.

The Nebraska State Horticultural Society held their summer meeting at Beatrice, July 21-23. Ed. Williams, of Grand Island, read an able paper on Hardy Perennials and C. H. Green of Fremont interested the members in a seedling cherry of which he showed a branch. It is a variety of the English Morello cherry, but is hardier and promises to be adapted to this climate.

"Every Bug Has His Dose."

Insect-destroying preparations that do their work well and effectively are the cheapest. Bowker's Arsenate of Lead and Bowker's Pyrox are recognized standard insecticides and fungicides for both indoor and outdoor use. Bowker's Insect Emulsion destroys many kind of plant lice, black and green flies, etc. Call or send for catalogue.

THE ADVANCE MACHINE

It is not what you pay for a machine, it is what it does, how it does it, the ease of operation and lasting qualities that bring customers and keep them. A Pa. florist orders three machines, arms &c. and tells us the 3 machines he bought three years ago have given the best of satisfaction and have always worked easy. Try our line and see that we do have the goods that make good.

GERANIUMS

Do Geraniums deteriorate, is a question often asked us, when Customers see how free our Geraniums bloom, and we answer "Yes" beyond a doubt, under some conditions. Take for instance the man who grows for Market and carries over his own stock, will he not invariably sell his best plants every spring and save the poor ones for stock, doing this time after time? Then, does it not stand to reason that his stock will rapidly deteriorate? That is one of the reasons why we contend that it is better to sell out and buy new plants that have been propagated from selected stock. We have been selecting our stock for a number of years always trying to improve it, until now our stock represents the highest type of perfection in all the best Standard Varieties.

Let us give you prices for your next season's supply; we have an immense stock.

For immediate shipment we offer 1000 in 20 Varieties from 2 in. pots for \$18.50; from 3 in. pots \$25.00. Cash with order.

R. VINCENT JR. & SONS CO., WHITE MARSH, MD.

A WONDERFUL NEW
NEPHROLEPIS

NEPHROLEPIS SUPERBISSIMA

INTRODUCTION
OF 1908

We desire to call attention to this new fern, which originated with us and which we are introducing this year. It is a very unique and distinct novelty, — as distinct from *Pierstoni* and *Elegantissima* as they were from *Bostonensis*. It is, in fact, a complete break. The fronds are very heavily imbricated, the pinnae overlapping, making the fronds very dense and compact.

It was awarded a **FIRST-CLASS CERTIFICATE** by the Royal Horticultural Society, at Crystal Palace, London, November, 1907, the plants exhibited there having been shipped from New York two weeks before that time. After being exhibited in London, the same plants were shipped to Edinburgh, Scotland, where they were again awarded a first-class certificate by the Scottish Horticultural Society. This will indicate the value of this fern as a novelty, and also demonstrates in a very conclusive manner its fine keeping and shipping qualities.

Fine, strong plants, 2½-in. pots, \$15.00 per 100; 4-in. pots, \$25.00 per 100;
6-in. pans, \$9.00 per dozen; 8-in. pans, \$18.00 per dozen

THE SPECIAL CONVENTION NUMBER

In Honor of the

S. A. F. Twenty-Fifth Anniversary

At CINCINNATI

WILL BE ISSUED ON AUGUST 14

This will be an issue of exceptional interest and will be widely circulated and widely read. Its value as an advertising medium for all floral and horticultural material cannot be over estimated. S. A. F. trade is always worth a special effort at Convention time. Send your order in early and it will have our best attention.

Rocky Mountain Rambles

VII.

In a previous number of HORTICULTURE I discussed the flora of the Salt Lake Basin from which the vegetation of the semi-arid plain of Idaho does not differ essentially. The Sage Brush (*Artemisia tridentata*) is found in southern Idaho to the foothills of the Blue Mountains and eastward from the Cascade Mountains. Along the streams, especially Snake River, there is a great deal of what is commonly called the Cottonwood (*Populus angustifolia*); on the banks of the stream the Sandbar Willow (*Salix fluviatilis*) is an abundant species, while a form of the Almond-leaved Willow (*Salix amygdaloides*) is met very often. The Shiny Willow (*Salix lasiandra*), a beautiful species which should be cultivated in the eastern states, is abundant at higher altitudes. Of the roses the most conspicuous along the streams is the Fendler's Rose (*Rosa Fendleri*). On the dry arid plains Buckley's Meadow Grass (*Poa Buckleyana*) is common, and occasionally the *Oryzopsis cuspidata* may be seen. This species is common east to the Nebraska sand hills and abundant on the plains of Colorado, New Mexico, and the Dakotas. The widely distributed Needle Grass (*Stipa comata*) also occurs; on the dry and rocky hills the western Red Cedar (*Juniperus occidentalis*) occurs in scattered groups. It is the only conifer found on these dry, rocky lava beds.

Leaving the volcanic lava fields of Idaho we may pass on to the Blue Mountains of eastern Oregon, the flora here is much more Rocky Mountain than Cascade. The Bull Pine (*Pinus ponderosa*) at lower altitudes in the mountain attains great size, often more than 150 feet high and six feet in diameter; at higher altitudes the Lodge Pole Pine (*Pinus Murrayana*) occurs. Other conifers occurring at higher altitudes are the Engelmann Spruce (*Picea Engelmannii*) and the Douglas Fir (*Pseudotsuga Douglasii*) which does not, however, attain its maximum height and development until the west slope of the Cascades is reached, where, too, may be found the Shrubby Cinquefoil (*Potentilla fruticosa*) and the large leaved Aven (*Geum macrophyllum*), the Blue-flowered Lupine (*Lupinus leucophyllus*), the Yellow-flowered Bitterweed (*Thermopsis montana*), and the Purple-flowered Monkeyflower (*Mimulus Lewisii*) growing in springs and brooks and in mountain marshes, and the Purple Lousewort (*Pedicularis Groenlandica*).

At the Dalles in Eastern Oregon, on the Columbia, on the eastern slope of the Cascades with a comparatively small rainfall wheat and other small grains are grown without irrigation. Peach and other fruit trees are plentifully planted in the valley of the Columbia. The sandbars formed by the drifting sands from the Columbia river for many miles down the stream are interesting; they are ever changing and were it not for the "sand fences" erected by the Oregon short line these drifting sands would soon cover the tracks. Towards the stream these dunes are often covered over with a

The Black Cottonwood (*Populus trichocarpa*) Columbia River, near Hood River, Oregon, used in the Manufacture of Boxes

willow, known as the Columbia Sandbar Willow (*Salix sessilifolia*), which grows abundantly in this valley. These bars when moist enough become covered with grasses, followed later by this willow.

The Columbia is in many respects the finest large stream in the United States. It is a delightful trip down the Columbia below the Dalles because of a series of rapids and cascades and the constantly changing scenery contrasted with the beautiful green on the mountain slopes. Much of the timber along the slope has long since been removed, but an abundant new growth of pines, firs and spruces is rapidly replacing the old trees.

The eastern slope of the Cascades is much drier than the western slope. In the bottoms along the stream near Hood River one begins to see large trees of the Black Cottonwood (*Populus trichocarpa*) from 2 to 4 feet in diameter, attaining a height of 150 feet, although on the west slope of the Cascades along other streams and the Columbia it may attain a diameter of 8 feet and a height of 200 feet. It is the most magnificent of our poplars. It is largely used for making excelsior and boxes. Below the Dalles one gets a fine view of Mt. Hood, the glaciated peak of the Cascades in Oregon, and a magnificent peak it is. Though not a lofty mountain, it presents a grand spectacle. The most accessible point to reach the mountain is Hood River on the Columbia. The city of Hood River has become famous on account of its fruit industry and has given Oregon more fame in

the fruit line than any other point, although there are many other places equally valuable in that state.

The slopes and valleys were covered with an abundance of Bull Pine (*Pinus scopulorum*) in an early day before the forests gave way to garden and field. The Western Larch (*Larix occidentalis*) was abundant on the slopes and has furnished much lumber; up the valley and on the mountain sides the Douglas Fir, the Western Hemlock (*Tsuga heterophylla*) and Red Cedar of Washington (*Thuja plicata*) become more abundant. The mountain sides are covered with great masses of the Spiraea Aruncus (*Aruncus vulgaris*) with ample panicles of white flowers, a most desirable plant to cultivate in gardens.

The mighty forests of Douglas Fir, Cedar, Hemlock, Larch (*Larix Lyalii*) and Spruce have long since been removed in the vicinity of Portland, but everywhere a vigorous young growth of the various conifers is appearing. Only a short distance from Portland one may still see some of the giants of the forest, at Creighton, a suburb of Portland. A few mighty firs and cedars are abundant in the valleys, and at Vancouver, across the river from Portland several of these monarchs occur on the grounds of the military reservation. The woods about Portland are interesting. Though it be in the summer, during the dry season, there is a vigor to the vegetation not seen in our eastern forests. I was shown a field of Douglas Fir which thirty years before had

been in an oat field. The young trees were 60 and 70 feet high and many of them were 20 inches in diameter. One is astonished to see how quickly the forest species occupy the vacant soil, when left to itself. Some of the enterprising horticulturists have made experiments with various eastern species. The European trees usually do very well; there are splendid orchards of sweet cherries, apples, and pears. Our eastern Shag-bark Hickory and the White Oak, however, make only a very slow growth. The Redwood of California (*Sequoia sempervirens*) is perfectly hardy. The Giant Redwood (*S. gigantea*) is also hardy. The *Libocedrus decurrens* and the White Cedar (*Chamaecyparis Nootkaensis* and *C. Lawsoniana*) also succeed. Splendid specimens occur near Portland. One is interested in the deciduous trees and shrubs found here. The Western Dogwood (*Cornus Nuttallii*) with its large white bracts, surrounding small flowers crowded in a loose head, and its bright and shiny leaves is abundant everywhere. The Madrone (*Arbutus Menziesii*) a small tree with exfoliating bark and the White Oak (*Quercus Garryana*) and Ash (*Fraxinus Oregana*) were common in rocky places. The swales are lined with the Western Wild Apple (*Pyrus rivularis*) and the undergrowth contains an abundance of Beaked Hazel (*Corylus Californica*) the wood of which is used for making rustic chairs and other furniture. The *Spiraea Douglasii*, well-known in cultivation, as well as the *S. lucida*, is common in woods throughout the region. I enjoyed a small outing to Creighton, near Portland. The small village is easily reached by an electric line and a short walk will take one to the woods, the deep recesses with their firs and cedar. At this point Mr. Thomas Howell lives. This farmer botanist is the author of a Flora of Northwest America. He has enriched science by a large number of new species of plants. I spent a pleasant afternoon with him. In conversation with him I learned that he is a self-made man. His school advantages were very meager but in his desire to become familiar with the plants of Oregon specimens were sent to Dr. Asa Gray of Harvard University from whom he received his inspiration to explore the botany of the region. He has sent plants to every institution of note in this country and abroad.

One should not fail to make a trip to the coast down the Columbia to Astoria and the vicinity. Astoria is famous because it was here that Lewis and Clarke spent their winter on their exploring expedition; and later it became a trading post. Not much of the glory of the great forests remains about Astoria. Taking the railway we pass the various small stations; the names of one or two remind us of the Lewis and Clarke expedition. The point where the exploring party made their salt is pointed out to us.

There is Tilamook Head, Ft. Clatsop and other familiar names of this expedition. It will be remembered that Lewis and Clarke named their fort Ft. Clatsop. Fruit trees seem to do well. I saw many apple and pear trees. The atmosphere is so heavily laden with moisture most of the year that the trees become covered with lichens. Everywhere along the coast the Scotch Broom (*Cytisus scoparius*) has become naturalized. The region about the mouth of the Columbia, known as the Tilamook Country, has become famous as a dairy country and should prove a fine country for vegetables and fruit. The low meadows are rich in grasses like Cheat (*Bromus Pacificus* and *B. Hookerianus*), meadow grasses like *Poa macrantha* and *P. confinis*, and common Blue Grass (*P. pratensis*) which has become naturalized everywhere. The Velvet Grass (*Holcus lanatus*) grows

MR. THOMAS HOWELL,
Pioneer and Oregon Botanist.

in profusion not only in western Oregon but throughout the Cascade region in Washington. Two vetches the *L. maritimus* and a larger species *L. polyphyllus* are common near the coast. As we speed along through forest and meadow we reach Gearhart Park, a small summer resort. Here we spend a most delightful time in the woods. The great trees of the Sitka Spruce (*Picea Sitchensis*) only found along the sea coast and said to be the largest tree in Oregon, sometimes reach a height of 300 feet and a diameter of 20 feet. I saw

In a Forest of Young Tideland Spruce (*Picea Sitchensis*) Near the Sea Coast, Gearhart Park, Oregon; Common Brake and Salal in Foreground.

none as large as this, but it was a virgin forest with its Spruce, Hemlock, Cedar and Giant Brakes (*Pteris aquilina*) along the railway. These were as high as I could reach. Where little openings had been made for farms our Eastern Foxglove (*Digitalis purpurea*), the little *Linaria cymbalaria* and Pansy (*Viola tricolor*) were running wild. The Salal (*Gaultheria Shallon*) with black rather sweetish fruit was common with smaller specimens of Spruce and Hemlock. The Beach of the Pacific was only a few miles away. Here a peculiar stunted pine (*Pinus contorta*) and a parent of the original of our cultivated Strawberry (*Fragaria californica*) grew abundantly on the sand dunes and beach away from the tides.

One who has never seen this rugged vegetation of herb, shrub, and tree, in such profusion is filled with admiration at the lavishness of nature's greatness. He wonders why some of these places in all of their primitive beauty cannot be kept for the enjoyment of man.

- L. A. Samuel

Ames, Ia.

Notes from the Arnold Arboretum

Since several years we cultivate at the Arboretum a new India-rubber tree from China. The largest specimens are now six to seven feet high and look healthy and vigorous; they seem perfectly hardy, as they have stood uninjured during the last three or four winters. This tree is *Eucommia ulmoides*, which was discovered by Dr. Henry about 1887 in Central China in the province of Hupeh and described as a new genus in 1891. It was introduced into cultivation about 1895 by Maurice L. de Vilmorin of Paris who had received seeds of it from China and distributed it subsequently to several botanical and horticultural establishments. Fortunately its propagation proved to be easy, as it grows readily from cuttings, as well from half-ripened green-wood cuttings in summer, as also from cuttings of mature wood made in autumn or early in spring. Moreover it was recently reintroduced by E. H. Wilson who sent seeds to the Arboretum which germinated freely and yielded a large number of young plants.

Eucommia ulmoides has been for some time a puzzle to botanists as to its systematic position and relationship. In its general habit and appearance of its fruit it suggests an affinity to the Ulmaceae, though it has no real relation to that family; it was at first tentatively placed with the Euphorbiaceae, a family which includes a number of India-rubber yielding species; by other botanists it had been referred to the Hamamelidaceae, while at present it is generally conceded that its nearest relation is with the Trochodendraceae, a small family related to the Magnoliaceae and including also *Cercidiphyllum* and *Euptelea*, both in cultivation at the Arboretum. *Eucommia ulmoides* is a tree in appearance much like an Elm-tree and reaching in its native country a height of about thirty feet. The alternate leaves are oblong or oblong-ovate in outline, sharply serrated and long pointed and measure from three to six inches in length. The flowers appear early in spring with the leaves and are rather insignificant, the staminate ones resembling those of *Cercidiphyllum*. The fruit looks like an elongated fruit of the English Elm and is about one and a half inches long. From this it appears that the tree has hardly any particular ornamental qualities, but from an economic point of view as a new source of rubber, it may prove to be an exceedingly valuable introduction. In China, however, where the tree is known under the name "Tu-chung" it is cultivated only for the medical properties of the bark which is highly valued by the Chinese; besides the fine threads of caoutchouc which appear when pieces of the bark are broken and carefully drawn apart are used for covering wounds. Chemical investigations made in France and England have shown that caoutchouc is present in every part of the plant except in the wood, but particularly in the bark and in the fruits and that it is of good quality. Experiments on a larger scale, however, have not yet been possible as the dried bark is only available in small quantities and the cultivated plants are still too small to yield sufficient material. Therefore the real commercial value of the new rubber-tree remains still to be demonstrated, but to all appearances *E. ulmoides* will have a future as a rubber producing tree, particularly as it is the only rubber-tree known which is hardy so far north.

handling insect problems may lead us. The well-marked absence of birds from territory where thorough spraying of large tracts have been practiced seems to give warning that in our zeal to escape one danger we are hazarding another. It was asserted by a member at a recent meeting of a certain horticultural society that twenty four dead robins and fifty dead sparrows had been found in a place which these birds usually frequented, soon after the trees in that locality had been sprayed. This is a phase of the insect campaign which seems to demand attention and careful investigation.

Wood preservation

The increasing scarcity and advancing price of wood has spurred ingenuity in various directions to find material to take its place in the different uses to which wood is put and to prolong its usefulness when used. The experiments which the national government is now conducting with reference to increasing the durability of timber and boards by chemical treatment are of particular interest and value to the owner of greenhouses. The high humidity and heat of the greenhouse is conducive to rapid decay, and if any process can be perfected whereby this may be arrested, and whereby as a further result a lower grade of lumber may be used, it will be a great help and material saving in expense of construction and repair. The investigation now going on and the conclusions reached by the government experts will be followed with much interest by the horticultural fraternity.

A local issue

The Manufacturers' Association and other business interests centering in Salt Lake City are agitating the question of home grown shrubs and trees versus nursery stock shipped in from eastern sources. "That representatives of eastern houses should come here and capture the trade they do is a matter of mystery to the nurserymen of the city," says the Salt Lake City Telegram. It states further that "an effort will be made to start a campaign against the eastern orchardists, in line with the general fight for the patronizing of home industries and home products." Nobody can reasonably find fault with all this. It is a laudable purpose. But the rule which prevails universally wherever buying and selling are carried on must be reckoned with, viz.—that the goods must be equally good and equally cheap in price and the terms equally favorable if the local dealer is to control the business; and then, after all has been said and done, there remains the good advertiser whom, everything else being equal, you can't beat out, no matter where he comes from.

A promising "infant industry"

News from northwest Washington relative to the outcome of experiments carried on by the government for the past five years is very encouraging to all who would like to see the bulb-growing industry well established on American soil. So firmly has the idea been rooted among horticultural people that the peculiar adaptability of the lowlands of Holland, together with low cost of labor there, presents an insuperable obstacle to profitable competition on this continent, that it has been the custom to scout as visionary and absurd any suggestion that home production of the so-called Dutch bulbs might yet be made a commercial success. That the proper soil and requisite climatic conditions have at last been found by the Department of Agriculture, seems now, however, probable. In fact, it is boldly stated that the bulbs produced in this land are superior in health, blooming, and all other qualities to the best Holland product. Furthermore the land value is but a fraction of that of the Holland farms.

The statements which are repeatedly made as to the deadly effects on the birds, of the poisonous sprays so generally used for insect extermination, are both startling and disquieting and furnish good cause for anxiety as to where our present methods of

An alleged source of danger

TURKISH METHOD OF CULTIVATION OF GARDENIA FLORIDA.

For the cultivation of *Gardenia florida* at Constantinople a method has come into employment, original and practical, which might be employed with advantage in other countries, where the climatic conditions are suitable. It quite differs from the practice in other parts of Europe. The cuttings are taken at the beginning of the month of January, and these consist of healthy shoots of the previous year's growth. They are cut at a joint and struck in a bed in the propagating house. This bed is made in the following manner: A layer of beech tree leaves, in a decayed state, and peat in equal proportions is placed at the bottom about 6 c. m. deep, and over this a layer 2 c. m. deep of thoroughly washed, coarse-grained quartz sand. When the cuttings have been put into the bed the lights are placed over them and kept close. The warmth of this bed should be maintained regular at from 15 to 18 degrees C., and the cuttings lightly sprinkled twice or thrice daily. As the *Gardenia* has a great preference for the kind of soil afforded, the cuttings make strong roots, and mostly form small and good balls. In March the cuttings are taken out of the bed with as little disturbance of the balls as possible and potted and placed on a frame having a warmth of 15 to 18 degrees C., close to the glass, and no air afforded. They must be closely watched, and when growth commences the points must be pinched out, in order that no runaway shoots form.

Syringing and shading according to the weather conditions should be duly afforded. The cuttings remain in this dungbed for a period of six weeks, during which they become well rooted, and develop good bushes. At the end of April they are fit to be placed in the culture bed. The making of this bed is the foundation of the magnificent results of the Turkish method of cultivation. The frames are packed with paper and carton waste from the cigarette factories which maintains a regular steady warmth for the entire year. The paper, etc., is placed in the frames to the depth of about 2 ft. 4 in., properly wetted, and turned over several times similarly to stable litter, and finally made firm. On this mass of heating material is placed a 9-inch layer of leaf mould and peat, to which a quantity equal to one-half of the whole, of decayed wood (chestnut) is added. A bed made in this way will retain its warmth for one year. A bed made of the wings of spruce seeds will last an equal space of time. The plants are turned out of the pots into this bed at the end of April and in the early part of May, at a distance apart of 16 inches quincunx fashion, the lights are put onto the frames and kept close till the plants begin to grow. Later ventilation and syringing are afforded by day. In June the lower boards of the frames are removed all round, above ground, and the lights supported on bricks, at such a height that the plants are about 9 inches distant from the glass. The glass is shaded with a mixture of red clay and water and as rain seldom occurs in the

period of May-September, this kind of shade answers admirably, but should it be carried away by rain it is an easy matter to replace it. Clay is better than lime, the latter having an affinity for the oil in the putty, causing it to fall away and spoiling it.

In the course of the summer the stronger shoots are stopped, the plants syringed, in accordance with weather conditions and the light raised gradually as the plants grow in height. In October, the plants are lifted with good balls and potted in suitable-sized pots, not too large, and plunged in a mild dung or leaf bed and the lights kept closed for a time. After the lapse of a month the plants have filled the pots with roots and should be placed in the intermediate house to develop their flower buds, and in February and March to expand.

Under the above kind of treatment *Gardenias* grow to a height of 50 to 60 c. m., and carry always from 30 to 40 flowers.

FREDERICK MOORE.

USEFUL BOOKS.

We can supply the following books, postpaid, at the prices listed:—

The American Carnation. C. W. Ward. Price, \$3.50

Chrysanthemum Manual. Smith. Price, 40 cents.

The Chrysanthemum. Herrington. Price, 50 cents.

Manual of the Trees of North America. C. S. Sargent. Price, \$6.00.

Soils: How to Handle and Improve Them. S. W. Fletcher. Price, \$2.20.

Daffodils-Narcissus and How to Grow Them. A. M. Kirby. Price, \$1.10.

The Art of Landscape Gardening. By Humphrey Repton. Price, \$3.20.

Roses and How to Grow Them. By Many Experts. Price, \$1.21.

The New Cyclopedia of American Horticulture. L. H. Bailey. Four volumes, \$20.00.

How to Plan the Home Grounds. S. Parsons, Jr. Price, \$1.10.

How to Make a Vegetable Garden. Edith L. Fullerton. Price, \$2.20.

KEEP FISHIN'

Hi Somers was the durndest cuss

For catchin' fish—he sure was great!

He never used to make no fuss

About the kind of pole or bait,

Er weather, neither: he'd jest say,

"I got to ketch a mess today."

An' toward the creek you'd see him slide,

A-whistlin' soft an' walkin' wide.

I says one day to Hi, says I,

"How do you always ketch 'em, Hi?"

He gave his bait another switch in.

An' chucklin', says, "I jest keep fishin'."

He took to readin' law at night

And pretty soon, the first we knowed,

He had a lawsuit, won his fight.

An' was a lawyer! I'll be blowed!

He knowed more law than Squire McNab!

An' though he had no "gift of gab"

To brag about, somehow he made

A sober sort of talk that played

The mischief with the other side.

One day, when someone asked if Hi'd

Explain how he got in condishin,

He laughed an' said, "I jest kept fishin'."

Well, Hi is Gov'nor Somers, now;

A big man round the State, you bet -

To me the same old Hi, somehow;

The same old champion fisher, yet,

It wan't so much the bait er pole,

It wan't so much the fishin' hole,

That won for Hi his big success;

'Twas jest his fishin' on, I guess;

A cheerful, stiddy, hopeful kind

Of keepin' at it—don't you mind?

And that is why I can't help wishin'

That more of us would jest keep fishin'.

—Chicago News.

A TRIBUTE TO THOMAS C. THURLOW.

In the death of this gentleman, Horticulture loses one of its finest representatives. He was a devout and reverent Christian and all the flowers he so dearly loved seemed to be a part of him. He was one of the purest, sweetest souled men I ever saw. I never knew a man with a finer appreciation of all that was beautiful. His grounds were a garden of delight and how he did enjoy his flowers. Lovingly he would linger over them and drink in their beauty. And while quite ill his children went out and gathered armfuls of his finest peonies and stood great vases full of them around him and he said with rapture "They cured me. They were the best doctors I ever had."

He was the father of the American peony business. He wrote the first article of any importance ever written on the subject in America. He first awakened in the heart of the writer an interest in this resplendent flower and much of the interest in late years in perennials is traced to him. He always wanted the best regardless of price and almost always carried off the prizes at the great Boston shows.

I first became acquainted with him in the fall of 1889. We had some correspondence and he wrote me while living in Franklin, Nebraska, that if I ever came East I must make his house my home. I did so and was immediately adopted into the family. We became chums. We were of the same age and he would introduce me as his twin brother. Once while recovering from rheumatic fever he took me home and kept me till I recovered. Our comradeship is one of my pleasantest memories. It was such a shock to hear of his death. He was never strong and for the last ten years he was an invalid, spending several winters in the South.

He married late in life and leaves four children. His daughter Susan was his constant companion and gave him almost reverent attention. Edward is preparing for the ministry. George and Winthrop are proficient horticulturists and will carry on his work.

He was born in 1832 and was nearly 77 when he passed away July 21st. He gently breathed his last surrounded by devoted wife and children. His last letter was written to me.

He leaves a better and more beautiful world as he passed through it on to the

"Sweet fields beyond the swelling flood
And never withering flowers."

C. S. HARRISON,

York, Neb.

NEWS OF THE CLUBS AND SOCIETIES

SOCIETY OF AMERICAN FLORISTS AND ORNAMENTAL HORTICULTURISTS.

Rudd Will Not Be a Candidate for Re-election.

As I find it impossible to do full justice to my other work and at the same time do all that might and should be done for the betterment of the S. A. F., I find it necessary not to allow my name to be used as a candidate for re-election.

The office is of so much importance and the prosperity of the Society depends so largely on the man in the secretary's office, that I feel it necessary to make this advance announcement so that the members may have ample time to think the situation over carefully and pick out in their own minds the best available man and be prepared to work for and vote for him.

I think perhaps very few in the Society, possibly none except William J. Stewart and myself fully realize what an enormous amount of work comes to the able, energetic and honest man in the office of secretary of this great society of ours, and what a great proportion of that work the man who has not the ability or the energy to do it or who is not honest enough to give to his work the best that is in him, can shirk. The salary of the office at present is \$1000 per annum. A man can if he chooses sit down on the job and do \$250 worth of work and pocket the other \$750 as a Christmas present. On the other hand, the right man can do \$1500 worth of work and then feel dissatisfied with himself that he has been unable to take up many things that would undoubtedly in the future advance the Society's interests and increase its membership. The bad point about the matter is that much of this important work shows only in future results and the secretary may if he chooses shirk a large proportion of it without the rank and file of the society becoming aware of his shortcomings for a long time. The society has much to be grateful for in having had the long continued services of so able a man as Mr. Stewart, and I sincerely trust that they will pick out the best man available with the idea of continuing him in office for a long term of years.

Every member of this society who has the good of the organization at heart should bear in mind that it is, although twenty-five years old, only in its infancy as yet; that the possibilities for growth and the extension of its influence and its ability to do good for the trade at large and for the individual members is almost infinite. The secretary whom you will choose at the next meeting will have the destiny of the society largely in his hands and it behooves each and every member to put aside all questions of personal friendship and look only to the man, and to his honesty and ability. If anyone asks you to vote for a man because he is a "good fellow" vote against that man for that very reason. The "good fellow" in the ordinary acceptance of the words, is the very

worst fellow in the world for your secretary. If any one asks you to vote for a man because he "needs the money" vote against that man for that very reason. If you are personally a friend of either of the class of men spoken of above, vote against each of them for that reason also. The friend of the "good fellow" should keep him out of a position where nothing but failure awaits him. The friend of the man who "needs the money" should realize that he can get more money in many easier ways than in this position. There is no easy money to be made in the job except by taking money for work which one does not do.

I have enjoyed immensely getting back into harness again and having an active part in the work of the society. I have enjoyed the work itself greatly and if the society wished me to continue in the office would ask no greater pleasure than to go on with that work, but to continue in the office would be to either let my own work suffer or that of the society, or more likely both.

I know that no man engaged in active business, either as a proprietor or as an employee, can take up this work and carry it out so that the society may achieve the success which is within its grasp, unless he grossly neglects his own business. Therefore, we must look elsewhere for the ideal man. As a matter of good sound business policy also, the man selected should be a young man or at least not an old one. We should select our secretary much as we would buy a horse. The old horse may be well broken, sound and strong, and yet we will buy the young one, because there are more years of work in him. In the same way we should select for office a young man for secretary with the idea of postponing as far as possible the expensive process of educating a new man for the job.

I trust and believe that the members of the society will not take offense at my plain speaking, but if they do I shall simply be sorry but not regretful. The thing is of such vital importance and of such great interest to us all that these words had to be spoken.

W. N. RUDD, Secretary.

August 2, 1909.

LADIES' SOCIETY OF AMERICAN FLORISTS.

The Ladies' Society of American Florists will hold their meetings at the Assembly room of the Sinton Hotel, Wednesday and Thursday, August 18, 19 at 10.30 a. m. The secretary will be found near Secretary Rudd's office. Lady members please wear your badge pin. MRS. CHAS. H. MAYNARD, Secretary.

HOTEL RATES AT CINCINNATI.

The Burnet House, which is one of the most comfortable hotels in Cincinnati, announces special reduced rates for florists attending the S. A. F. Convention, as follows:

American Plan—\$2.50 per day and up.

European Plan—\$1.00 per day and up.

CINCINNATI FLORISTS' CLUB.

Meeting of Board of Governors.

One of the most interesting and important meetings held by the Board of Governors took place at the Sinton Hotel, Monday night, August 2nd. The finance committee reported they had in the bank very nearly \$3,000. The souvenir committee reported they have raised \$2,800. A copy of the Souvenir Book was presented to the Board of Governors, and was pronounced by far the most beautiful book of its kind that has ever been issued for a similar occasion. It is now being mailed to subscribers and members of the National Society. The committee on badges and buttons submitted samples. A plain white badge with the words "Reception Committee Cincinnati Florists' Society," was adopted. A silver button bearing the words "S. A. F. & O. H., 1884-1909, Cincinnati," was adopted.

Supt. of Exhibits, Wm. Murphy, announced that up to the present time he has sold 11,900 square feet of space, amounting to \$1,857. He also announced that there will be a charge of 25 cents for admittance on Thursday afternoon, August 19. As a special inducement, the Superintendent has made arrangements to have a special cut flower exhibition. John Lewis Childs will present a spike of gladiolus to every visitor on that afternoon.

Chairman A. M. McCullough has arranged to hold the President's reception at the Zoological Garden. This place is by far the coolest in proximity to Cincinnati.

The sports and ladies' committee announced that they have arranged in Heidelberg for an afternoon of bowling. The ladies' bowling match will be pulled off at this place, and luncheon will be provided for all in attendance. They have received about fifty prizes from local merchants, among them being a \$55 shotgun and a beautiful loving cup. For the shooting tournament Mr. Gardner has six or eight splendid prizes to offer. The crowning feature of the convention takes place on Friday, when all in attendance will board the Island Queen, a very large and commodious five-decker, which has been chartered by J. A. Peterson to take the entire convention to Coney Island where a barbecue will be awaiting them.

AMERICAN CARNATION SOCIETY.

Members of the American Carnation Society please take notice that there will be a meeting held at Cincinnati, O., at 2 p. m., on August 19th. This is a meeting of the board of directors, but all members who happen to be attending the S. A. F. & O. H. convention are cordially invited to meet with the board. Matters of importance will come before this meeting, and as we are allowed only 45 minutes, you are urged to not only attend but to be prompt, to avoid loss of time.

A. M. HERR, Pres. A. C. S.

Attest A. F. J. Baur, Sec.

THE PARK SUPERINTENDENTS AT MINNEAPOLIS.

The delegation of Park Superintendents going by way of Yellowstone Park to the convention at Seattle spent July 29 at Minneapolis sightseeing, as guests of Park Superintendent Wirth. There was general admiration for the Minneapolis Park system and its possibilities. The Webber Memorial Building at Camden Park was inspected, followed by a tour to Fairview Park, St. Anthony Parkway, Riverside Park, Minnehaha Park, where refreshments were served, Lake Amelia, Lake Harriet, Rose Garden, Loring Park, Kenwood Parkway, Lake of the Isles, Lake Calhoun and back to Lake Harriet. Dinner was served at the latter place, after which the visitors took a trip around the lake in the gasoline launch. At 10.45 p. m. they took the train for Yellowstone Park. The party was made up of the following: John W. Duncan, Boston; Earle G. Constantine, Spokane, Wash.; Mr. and Mrs. William S. Manning, Baltimore; Herman H. Boyer, South Bend, Ind.; M. L. Moore, Toledo, Ohio; John T. Withers, Jersey City, N. J.; Jackson Dawson, Boston; Mr. and Mrs. Harry T. Richards, Chicago; Daniel H. Ellis, Saginaw, Mich.; Miss Keith, Bridgeport, Conn.; and Mr. and Mrs. Theodore Wirth, Minneapolis.

FLORISTS' CLUB OF PHILADELPHIA.

Convention matters occupied most of the monthly session of this club held on the 3rd inst. It was decided to take the train leaving Broad Street Station 12:31 noon, Monday, August 16th, and due in Cincinnati at 8:15 a. m. the following morning. Those wishing to join the party should advise John Westcott, Ridge and Lehigh avenues, Philadelphia, in advance. It was voted to extend the freedom of the club room to the R. R. Gardeners' Association on their visit here August 24, 25 and 26. A committee consisting of Paul Huebner, H. F. Michell, H. M. Earl, Thos. Meehan, W. F. Dreer, Geo. Anderson and John Burton, was appointed to devise any sight-seeing courtesies that might be deemed desirable for the visitors. A motion to appoint a committee to confer with the P. H. S. about the club room, which will soon have to be vacated, was carried; personnel of said committee being left to the president.

CHRYSANTHEMUM SOCIETY OF AMERICA.

The Chrysanthemum Society of America will hold their next meeting and exhibition with the American Institute, New York, next November. Mr. Wm. Wells, the well known chrysanthemum specialist of Earlwood, Surrey, England, is expected to be present and has been asked by President Smith to serve as one of the judges. A schedule of prizes is now being arranged and will be mailed as soon as ready to any one interested, upon application to the secretary.

CHARLES W. JOHNSON,
Rockford, Ill. Secretary.

AMERICAN INSTITUTE.

The annual chrysanthemum show of the American Institute of the City of New York and the Chrysanthemum Society of America will be held at the Berkeley Lyceum Building, New York City, on Wednesday, Thursday and Friday, Nov. 10-12, 1909.

The schedule of prizes offered by the American Institute is out and copies can be had on application to Wm. A. Eagleson, secretary, 19-21 West 44th Street, New York. The prizes are, as usual, very generous.

The schedule of the Chrysanthemum Society of America, whose exhibition will be held in conjunction with that of the American Institute will be issued soon.

DETROIT FLORISTS' CLUB.

The meeting of this club on August 2, was taken up with the election of officers, which resulted: President, Chas. Plumb; vice-president, G. Brown; secretary, H. Schroeter; treasurer, Rob. Rahaley; librarian, H. Pickworth. The usually prevailing good nature came near being disturbed because all the old officers persisted in declining the repeatedly offered re-nomination. As far as can be ascertained, only ten members will go to Cincinnati.

DANZER.

CLUB AND SOCIETY NOTES.

The Connecticut Horticultural Society will hold a dahlia show at Unity Hall, Hartford, September 23 and 24, and a chrysanthemum show on November 3 and 4.

The Boston Mycological Club has arranged for an exhibition of mushrooms on Mondays in a location easily accessible by the busy element and visitors will be instructed as to the various kinds of fungi.

The Connecticut Pomological Society has issued a circular urging zeal in the attention given fruit culture in order that a creditable showing may be made by the state at the New England Fruit Show in Boston in October.

The American Breeders' Association will hold their annual meeting on December 8, 9, 10, at Omaha, Neb., in connection with the National Corn Show. Addresses by scientists and breeders prominent in the plant world are included in the program.

You can become a life member of the S. A. F. for \$25.00 (if your 1909 dues are paid). If the proposed amendment carries, the fee will be \$50.00. Why not take advantage of the present low rate? Life members pay no dues.

The Bar Harbor Horticultural Society will hold their flower show on August 14 in the Art Building, Bar Harbor, Me. The judges will be J. A. Pettigrew, Boston; W. N. Craig, North Easton, Mass.; Kenneth Finlayson, Boston; T. D. Hatfield, Wellesley; Duncan Finlayson, Brookline; Robert Cameron, Harvard Botanic Garden; Joseph Clarke, Sr., Manchester; Joseph Clarke, Jr., and Mr. Meredith, Lancaster, Mass.

During Recess

BUFFALO FLORISTS' CLUB.

The annual outing of the Buffalo Florists' Club was held on Wednesday, July 28, at the Bedell House, Grand Island. The day was an ideal one and the members with their families, friends and fellow-florists were on hand to enjoy the day of sports. The program consisted of many sporting events, which began soon upon arrival.

The delivery boys' race was quite interesting, especially to the store men. Winners: Stuntz 1st, Klokow 2nd, Tobin 3rd, Gittere 4th. In the 100-yard dash the winners were: Klokow 1st, Kinkel 2nd, Stuntz 3rd, Longley 4th. In the ladies' race there were a number lined up at the tape, the prize being a valuable one. Thefortunates were: Miss Bemish 1st, Miss Densen 2nd, Miss Adams 3rd, Miss Slattery 4th. Miss Cassidy and others "also ran."

The old men's race was next called by Geo. McClure, the able announcer, and a fast bunch of old men were on the line ready for the word. The betting was on Shank with odds 5 to 1, but the dark horse Reichert won by a nose with Brucker a close 2nd, Slattery 3rd, Priesach 4th, and a dozen "also rans." The relay race was won by Palmer's men, who have been in training since their last defeat about a year ago. The runners were: Walther, Kinkel, Griever, Stuntz, Clark and Longley.

The tug-of-war was about the hardest pull the greenhouse men have had in some time. Their opponents, the store men, who naturally are of light weight, gave them a hard time and only lost by one-half inch, the time being two minutes. Time keeper, ex-President Sandiford; judge, Louis Neubeck. W. A. Adams furnished rope and cheers.

The consolation race was won by Foebelcorn 1st, Jack Jerome 2nd, Savage 3rd, Clark 4th, Campbell 5th. Arth Beyer was booked for the winner, but was side-stepped by President Slattery and in consequence was dragged on the green grass and ruined a new shirt. The hop, step and jump was won by Longley, with Greiver 2nd, Kinkel 3rd, Stuntz 4th.

After a brief rest the ball game was called—greenhouse men vs. store men. Such notables as Scott, Boettger, Gettre, Foebelcorn, Frank, Cloudsley, Ehlman, Shank and R. Scott played for the greenhouses; and Kremer, Griever, Kinkel, Longley, Beyer, Clarke, Gittere, Jerome and Walther for the store men. E. C. Brucker had charge of the fountain and refreshments and the players were in excellent condition. In the fourth inning the greenhouses made four tallies, but in the sixth the storemen got the batting fever and secured six runs on a fumble of Beyers. The batteries were in excellent condition and deserve much credit. After the games all were ordered to the banquet hall which was beautifully decorated in the club's colors. Brief remarks were made by Toastmaster

Kasting who stated that he had come 88 miles to enjoy a gathering of this kind, W. A. Adams, Pres. Slattery, Chas. Keitsch and others. The prizes were then distributed to the lucky winners. All in all a very pleasant day's outing was had by all and the committee is again to be congratulated upon their success.

A PLEASANT SEND-OFF.

S. S. Butterfield, who is leaving New York for the west, was tendered a farewell luncheon at the Hotel Earlington on Friday afternoon, July 30, by a party of friends in the New York Florists' Club as a testimonial of their esteem for his companionship and his work in the club and their good wishes for his success in his new field. There were present: C. B. Weathered, who presided; F. H. Traendly, W. F. Sheridan, John Young, C. H. Totty, F. L. Moore, A. Jaenecke, Robert Simpson, F. R. Pierson, J. Austin Shaw, John Eirnie, H. E. Froment, A. H. Langjahr, E. Dailledouze, A. T. De La Mare, A. F. Faulkner, Henry Weissman, I. S. Hendrickson and the guest of honor, S. S. Butterfield. Speeches were made by all and Mr. Totty presented Mr. Butterfield on behalf of his friends—those present and some who were absent—a solid silver set of table cutlery. Mr. Butterfield responded appreciatively. J. Austin Shaw read the following original verses:

I'm sure we wish,—both you and I,—
The West may of its fortunes yield,
Give good success and sunny sky
And happy years to Butterfield.

So here's a toast, let's drink together:
Long may he live to bless his kin;
Find there but little stormy weather;
All of life's battles bravely win.

Feather his nest with softest down,
Reap the reward of strong endeavor,
Soon be the mayor of Buttertownt,
Lots of "mazuma" quickly gather.

And when the evening shadows fall,—
Say about nineteen fifty-five,—
May you, and he, and I, and all,
Still be on earth, and "very much alive."

GARDENERS' AND FLORISTS' CLUB OF BOSTON.

The Gardeners' and Florists' Club of Boston will hold a field day at the Framingham Nurseries of W. B. Whittier & Co. on Saturday, August 14. Members and friends will kindly take Boston and Worcester electric leaving Park Square at 1 o'clock. The Framingham Nurseries cover 175 acres and should prove very interesting to all who can attend. A cordial invitation is extended to any interested friends who may not be club members to join in this field day.

W. N. CRAIG, Secretary.

NEW YORK BOWLING TEAM.

Having been appointed captain and manager of the New York Club's Bowling Team at the Cincinnati Convention by the committee of arrangements, F. H. Traendly, F. R. Pierson and John Young, I designate Aug. 6th, 10th and 13th, 7 p. m., at Thum's Alleys, Broadway and 31st St., entrance 31st St., as the official evenings for making records to determine the team that will bowl in the national contest. Those failing at these record tests will not be considered eligible for the team.

ROBERT E. BERRY.

100 W. 103rd St., New York.

Obituary.

Mrs. Asa Gray.

Having outlived her famous husband more than a score of years and edited many of his letters and unfinished manuscript, Mrs. Jane L. Gray, widow of Asa Gray, the great botanist, died July 29 at "Burnside," Pride's Crossing, Mass., the summer home of her nieces, Miss Katherine P. Loring and Miss Louisa P. Loring. Mrs. Gray was keenly interested in the scientific researches of her husband and assisted him actively. She was 84 years old and a native of Boston. Mr. Gray died in 1888.

The funeral took place at the curator's house within the Harvard Botanical Garden at Cambridge, where Mrs. Gray continued to live after her husband's death. Burial was in the family lot in Mt. Auburn cemetery.

Varnum Frost.

Varnum Frost died at his home in Arlington, Mass., on July 30, aged 84 yrs, 7 mos. Mr. Frost was long widely known in the field of horticulture and agriculture. He was a very successful farmer and was one of the first to engage in market gardening. He went to Arlington when the place was thinly settled and he lived long enough to see nearly all of his original farm built upon. He retired from active life several years ago and since that time has made his home with a daughter. He was an active member of the Massachusetts Horticultural Society, serving on many important committees for a period of nearly half a century.

Richard G. Beneke.

Richard G. Beneke, of St. Louis, brother of J. J. Beneke, died on Wednesday, July 28, at the age of 49. Mr. Beneke was employed at the City Park Department and was well known among the trade, having been at one time in the store of his brother on Olive street. The funeral took place on July 30. He leaves a wife and two grown children. His many friends sent beautiful floral pieces and the St. Louis Florist Club sent a large standing wreath.

Mrs. Caroline C. Massey.

Mrs. W. N. Rudd has the sympathy of the trade in the loss of her mother, Mrs. Caroline C. Massey, who passed away at the home of her son, at Albany, N. Y. The funeral was held at the Rudd residence at Blue Island, a suburb of Chicago, and interment was made at Mount Greenwood. It is interesting to note that Mrs. Massey was the daughter of Norman Rexford, the first settler in Blue Island, and Mrs.

Massey went there with her father in 1835.

Edward M. Lyman.

Edward M. Lyman, founder of the firm of E. M. Lyman & Son, Springfield, Mass., died on August 1, at the age of 84. He built up an extensive seed business, and carried into it the experience gained from the Shakers by whom he was employed as a young man. He is survived by a widow and a son, Albert E., president of the company.

John R. Hellenenthal.

John R. Hellenenthal, who has been engaged in the florist business since 1853, died on July 27 at his home in Columbus, O., where he has resided for thirty years. He was connected with many local organizations and an active worker in all. He has been a member of the S. A. F. from the first convention in Cincinnati, in 1885, until 1904.

Heman Copeland.

Heman Copeland, a pioneer market gardener and the largest in No. Bridgewater, Mass., in the early days of that town, died in Chula Vista, Calif., on July 25, at the age of 66. A widow and two brothers survive him.

George Walker.

George Walker, superintendent and care taker of the Jabez Elliott Flower Market, Cincinnati, O., since it was started, died on July 25. An earnest worker whose place will be hard to fill.

PERSONAL.

John Forbes has resigned his position as gardener for Mrs. William B. Leeds at Newport, R. I.

Jacob Peterson has taken the position of manager for the Warren Point Floral Co. Warren Point, N. Y.

E. J. Deal, of W. W. Johnson & Son, Boston, Eng., is due in New York on Aug. 5. He will stop at the Imperial.

Visitors in Boston this week: W. A. Manda, So. Orange, N. J.; C. B. Weathered, New York; James Stuart, Mamaroneck, N. Y.

Fred Coles, A. J. Newell and D. Iliffe started from Boston on Monday night on a sight seeing trip to New York and Philadelphia.

Frank Howard Oransky, a florist of Cambridge, Mass., feels that his name is a business disadvantage, a cause of social prejudice, a financial detriment and a personal inconvenience. Therefore, weighed down with this long list of troubles, all caused by his last name, he petitions the Middlesex Probate Court for the right to lop off "Oransky" and allow him to henceforth be known as Frank Howard.

ROSES AND THEIR CULTURE FOR COMMERCIAL PURPOSES.

Paper Read Before the Morris Co. Gardeners' and Florists' Society, April 14, 1909, by Wm. G. Badgley.

As you all know, there are a few well defined principles and rules regulating planting, watering, cutting, tying, ventilating, etc., and, as these rules have been thoroughly threshed out before you time and again and, furthermore, as they have been practically accepted and adopted by all, we will not at this time go over them.

Selecting a Site.

The first thing to consider, and I now speak to those who have not as yet started in the rose growing business or those who contemplate expanding, is where to locate and what style of house to build. As to location I would say that this question should be well thought out before starting. Here are a few points in this matter to consider! A location near a railroad station should be secured, not too far from the point where your goods are to be disposed of, as selling cut flowers, be it through a commission house or otherwise, should be watched as closely as the fires in your boilers, I assure you. Then, again, being located closely to a shipping point will save you considerable in the way of teaming, carting supplies, shipping goods, carfares, etc., which expense will be perpetual. You should also select a location on property that is not too expensive, for the more you pay for your property the greater is your investment, and, therefore your place would have to pay just that much more on the capital invested to show the same percentage of gain as it would do on less expensive ground. This would also be a perpetual expense.

In securing property to erect your houses on, you should consider how the ground lays, what kind of a bottom you will have, whether or not your cellars would be dry, what kind of soil you are getting to grow your plants in, whether you are getting enough ground to expand on, and whether the property is in a place likely to increase in value. Property that is as nearly level as can be secured, with some place to run your cellar drains into, is the best. You should not build where you cannot drain, unless your bottom is gravel, as water in your cellar and standing around your houses is very detrimental and discouraging.

The Question of Soil.

A sandy or gravelly bottom is desirable, as this kind of bottom will absorb surplus water from watering and rains quickly, leaving the bottom of your houses practically dry. This you will find to be a big advantage in battling black spot and mildew. I would advise, by all means, when purchasing property for this purpose, to get enough, for the probabilities are you will never buy as cheaply again. You will need it to expand on, and you should have enough to procure all soils for growing purposes from. I believe that soil for

BEDFORD, MASS.

greenhouse purposes should be prepared in the field as nearly as possible to the conditions wanted when put on your benches. The reason for this is that cow manure in this vicinity is getting scarce and expensive. I would add, too, that the handling of this article in the form of mulching or otherwise, is the most disagreeable occupation one can be put at, aside from the fact that it is very detrimental to the growth of your plants if applied in bulk as I have seen some use it, more especially in the short days when it is hard under the most favorable circumstances to dry out your benches, or if applied in its green state when no air of consequence can be used.

Fertilizing.

In preparing soil in the field one can, by plowing in one or two crops of green stuff, cultivating, applying lime, bone, and stable manure, in sufficient quantities obtain a soil that will by giving a light top dressing of one-half rotten cow manure and one-half good soil, once in the spring and once in the fall, or oftener when the vigor of your plants call for it, produce better results with less expense than by using cow manure in the manner spoken of above. I recommend top dressing with a good sheep manure, which should be watered in for the purpose of general feeding. I say sheep manure, because this article contains nearly the right proportions of phosphoric acid, potash and nitrogen and ammonia. Apply at the rate of about 200 lbs. to a 20 x 150 ft house about once a month, or a little oftener in the long days when your plants are growing rapidly. A watering of good, strong, fresh cow manure liquid once a month is a very good way of feeding also. I would say that in a light soil which dries out quickly, and where water can be applied often, feeding can be done oftener to advantage.

Dimensions of House.

As to size of house.—As I have had no practical experience in building, operating, or maintaining the larger or modern houses, I therefore can give no experience in the matter, of my own, but I will say a few words based on what I have gathered from observation, and the related experience of well known growers.

A house from forty to sixty feet in width, built of what is known as iron

construction with concrete sides and cast iron posts set in concrete, is about what is considered perfection at the present time. A house of this character can be built for less money per square foot of ground space covered than wooden houses of the old style eighteen or twenty feet wide. They are easier and less expensive to operate and will produce better goods under identical conditions, as well as being less expensive to keep in repair, and will cover less ground as there will be less wasted space between them. As to the length of house, I would say that it makes no difference how long a house is, if partitioned at intervals of 150 or 200 ft., providing the heating and management can be economically and satisfactorily arranged.

To give an idea of the extremes to which some of our growers have gone, will mention a house I have in mind which is 156 ft. wide and 725 ft. long. This house according to its owners, is giving perfect satisfaction, and they have under construction at the present time a house 174 ft. wide and 725 ft. long. This should be watched with interest by all. I also know of another house 1340 ft. long and 60 ft. wide, which I know has produced as fine Killarney as was ever grown, and its owner says that he would build it longer if he had the ground to build it on.

While at the Rose Show in Buffalo, I visited a place where there were a number of what is known as pipe construction houses, that is to say, the posts, plates, purlins, rafters, columns, trusses and joints were all made of pipes and pipe fittings. I understand that this style of house can be built considerably cheaper than those that are known as the regular iron construction houses. This style, as I looked it over, appealed to me very much. I consider that it would pay anyone to look into the matter before building.

(To be continued)

Seed Trade

AMERICAN SEED TRADE ASSOCIATION.

President, J. C. Robinson, Waterloo, Neb.; First Vice-President, M. H. Duryea, New York; Second Vice-President, F. W. Hoigiano, Washington, D. C.; Secretary-Treasurer, C. E. Kendel, Cleveland, Ohio; Assistant Secretary, Leonard H. Vaughan, Chicago.

WHOLESALE SEEDSMEN'S LEAGUE.

F. W. Bruggerhof, Pres.; Burnet Landreth, Sec'y.

The Other Side of the Free Seed Controversy.

Editor of HORTICULTURE:

Dear Sir:—In several of the recent numbers of the trade journals letters and items have appeared that reflect on the manner in which the free seed distribution is being conducted by the Department of Agriculture. The writer of this holds no brief for the officials of the Department and is convinced that they are well able to take care of themselves, but he does feel that some one ought to protest against these attacks on the men instead of on the measures. The writer has himself been engaged in this work and helped to establish some of the policies that have been followed ever since and he knows whereof he speaks when he says that there is not a responsible official in the Bureau of Plant Industry who would not be glad to have the seed distribution done away with. Much more effort has been made by these men than the seedsmen know of to bring about this result. That they have not succeeded is not their fault, and that the distribution has grown since the work was turned over to this Bureau is only the logical result of good administration.

The trade should remember that these men have a hard problem to handle. On the one hand they have to get out the seed, and on the other they have a definite amount of money to use and the seeds must be secured within that appropriation. Mr. Landreth recently objected to the fact that the Department had placed a growing contract and wanted to know why this seed could not have been bought out of surplus. The policy of buying surplus is well fixed in the Department, and is carried out whenever surplus can be gotten. The writer himself lost an order last fall because another grower offered seeds in surplus that the writer wished to grow for the Department. To wait till the next season, however, and take a chance on being able to get surplus would be the height of folly.

The writer dislikes to see these attacks made when he knows that no more honest and conscientious set of men ever handled this work and that if the seedsmen would inform themselves as to the facts they would not take the attitude they are taking. No good will come of this attitude. If the distribution is to be stopped it must come by a gradual changing into other channels and the writer feels sure that the Department would welcome the co-operation of the trade in doing this. The trade ought to work with the

CHICAGO NOTES.

General News.

The special buyers' rates made by all railroad lines now, are bringing buyers into Chicago. Their tickets have to be signed by the Chicago Commercial Club.

Some of the finest Easter lilies seen on the market in a long time were shown by Bassett & Washburn, who have a large house of lilies just coming in bloom. They are all cold storage Giganteums and very fine for this time of year when good flowers are scarce.

The body of C. W. Smith, traveling salesman for the Leonard Seed Co., came ashore at Gary, Ind., and was identified by his brother. Mr. Smith lost his life July 18th while bathing at the Chicago Beach Hotel and his body was in the water ten days. The funeral services and interment were at Oakwoods Cemetery, Chicago, July 30. The casket was covered with a blanket of roses.

Personal.

F. Oechslin is on a business trip East.

W. W. Barnard has recovered and is on a trip to Wisconsin.

Martha Gunderberg of the Flower Growers' Market, is at Fairmont, Iowa.

Miss Hertha Tonner of the Flower Growers' Market, has gone to Michigan.

John Wilcox, of W. W. Barnard's, buried his mother last week at Lemington, Wis.

W. L. Palinsky is enlarging his store at 64 Palmer street, and making other improvements.

Miss Frances Brundage of E. H. Hunt's, will spend two weeks at Galesburg, Ill., and points in Missouri.

Miss Clara Burkart returned from two weeks in Indiana. Miss Burkart is in the supply department of E. H. Hunt Co.

T. E. Waters of Randall's, received a telegram Monday announcing the death of his brother, Robt. J. Waters, in Boston.

Mr. and Mrs. Robert Lange of the North Side, are enjoying a month's outing leaving their retail store in the capable hands of their son.

O. P. Bassett, C. L. Washburn and E. B. Washburn returned from their northern trip Sunday. They found the florists along their route hospitably inclined and enjoying a good business.

Augustus H. Goodwin, vice-president of the W. W. Barnard Co., Chicago, and Mrs. Goodwin, were presented with a gold medal by the Italian Government in recognition of their services in Palermo directly after the earthquake.

Visitors:—J. R. Falkenstein of Napersville; Mrs. S. B. Stewart of Stewart Seed Co., Omaha, Neb.; Mr. Pfitzer of Stuttgart, Germany; Gus Frederickson of St. Joseph, Mich.; Aug. Dressler, Crown Point, Ind.; Mr. Edlefsen of the Edlefsen-Leideger Co., Milwaukee, Wis.; Mrs. C. E. Schaefer of LaCrosse Floral Co.; John Stamm, Hutchinson, Kan.; J. E. Meinhart, Leavenworth, Kan.

PHILADELPHIA NOTES.

Thos. Roberts, of Colonel Morrell's, Torresdale, writes from London under date of July 23 announcing all well, glorious weather, fine trip, Kew gardens unrivalled in the world and everything in a concatenation accordingly.

A. E. Sterling, forester for the P. R. R., and Paul Huebner in a similar capacity for the Reading R. R., are the active spirits in the local arrangements for the entertainment of the R. R. Gardeners' Association, which meets in its third annual session at Horticultural Hall, August 24th. Geo. B. Moulder of the Illinois Central R. R., Chicago, is the secretary of the association and will appreciate any courtesies extended to the visitors by local horticulturists. A few automobiles for a trip around town, and an invitation to Fordhook, etc., would seem to be in order. Also the freedom of the Florists' Club, and a reception committee!

A party of gardeners from the Pennsylvania Horticultural Society visited Fordhook Farms, Doylestown, Pa., on the 5th inst. Among the delegates who took part in this enjoyable occasion were: Thomas Logan, William Kleinheinz, William Robertson, Francis Canning, Samuel Batchelor, Joseph Hurley, Thomas Long, John Hobson, J. McCleary, and Thomas Holland. After the hospitalities of the old homestead—presided over by Howard Earl, the Burpee manager and his wife,—the visitors inspected the elaborate trial grounds of this great seed firm and were enthusiastic in their praise as to what these experiments mean to the advancement of horticulture in America.

If two be good looking, suave and debonair, something is liable to happen. After gazing at each other with indescribable and ever-increasing delight for three long weeks two souls were at last riveted together, determined not to resist the honest impulses of the Creator any longer. Their destiny was plain as day before them. Why hesitate? And so it is our pleasant duty to chronicle the wedding of J. Max Nitschke of Habermehl's Bellevue-Stratford emporium, to Miss Chrystil Mueller on July 31st at high noon. After lunch at the French Club, attended by a merry party of friends who were profuse in wishing the young couple good luck, good fame, good fortune, a start was made for Wildwood, N. J., after which a tour of Canada was on the program. After August 20th the intrepid voyagers will be pleased to welcome their friends at 5130 Ludlow street, West Philadelphia. This is the kind of news I like to write. Hurry up you hesitating swains. Life is short.

Springfield, Mo.—The Pioneer Floral Co. at a recent annual meeting re-elected their officers for another year as follows: President, W. M. Murray; vice-president, L. H. Murray; secretary and treasurer, R. R. Ricketts; manager, W. J. Shaffitzel.

Flower Market Reports.

BOSTON Conditions remain about the same as for the past few weeks, with the exception of asters and sweet peas, the market being simply flooded with them and in consequence prices have broken badly. Roses are also in abundance, but mostly from small plants; but prices are holding well. Gladioli are plentiful, but of a poor quality.

Trade has been much on the quiet side with sufficient stock of all kinds. Asters and gladioli are coming in more plentifully than the week previous. Lilies of all varieties are too plentiful. Roses and carnations are of poor quality and sweet peas are about as plentiful as ever. It is hoped that the market will improve as everything has been draggy.

The last week in July **CHICAGO** showed up well compared with the previous weeks in point of business. Not that there was any great rush of trade or anything like high prices, but the busy days made the florists think of the good times coming when business shall start up again. Each day makes the stock of Beauties better in quality and the demand is increasing accordingly. Asters are also gaining in length of stem and size of bloom. Sweet peas are on the retired list and in some wholesale houses carnations are practically occupying the same position. Roses are coming in as fast as the demand requires. Kaiserins are of very good quality and this flower is at its best now.

Last week proved **PHILADELPHIA** rather a disappointment, business being more sluggish than the week previous. There was a fair demand for high-grade stock, such as orchids, lily of the valley and roses; but on lower-priced items such as asters and gladioli, the market was very sleepy. Of course, where asters were very good they went well, but the vast majority of them could not be graded first-class. All kinds of flowers were more plentiful than at any time since summer business commenced, and the usual end of the week cleanup by the street men, did not materialize—the city being half empty on account of vacations. What few sweet peas were seen around were mostly from eastern points.

Nothing of importance has transpired to disturb the serenity and listlessness of these midsummer days in the flower market district. A little flurry in the morning hours when some out-of-town florist strikes luck in the shape of a little order for something that it is hard to get, is about the only sign of activity. Keeping store open is, in fact, a mere formality on the part of most of the city florists. Good material is not abundant, but there is enough for all demands. Asters are coming in heavily—some of them very handsome. Nymphaeas and other water flowers are coming in in beautiful variety.

GREEK-AMERICAN FLORISTS' ASSOCIATION.

This very much alive New York organization "improved the shining

hour" last Thursday by holding their annual picnic at Witzel's Point grounds. The gentlemen who are active in the affairs of the Association are thorough breeders, and when anything in the nature of an entertainment is on they go the whole length. Naturally this outing was a brilliant success like its predecessors, and a large number of florists of other races and nationalities were included among the attendants who numbered fully 450. The games were many, including bowling, discus throwing, Marathon and other races, etc., and a base ball game between Americans and Greeks, which was won by the former by a score of 7 to 6, the trophy being a handsome vase which has been displayed since in John I. Raynor's window. Miss Leavitt, bookkeeper at Guttman's wholesale flower store, won the prize, a beautiful bracelet, in the young ladies' race. All the games were well contested. That there was splendid music, a sumptuous dinner, and plenty of dancing goes without saying. George D. Nicholas delivered an eloquent address in Greek and English.

Knoxville, Tenn.—W. N. Simonton, of Albany, N. Y., will start in the nursery business here.

Philadelphia, Aug. 2, '09

Store closes 6 p. m.

Washington Store, 1212 New York Ave.

Detroit reports the average business for July as better than it was July, 1908. Fields were flooded at from 2 in. to 6 in. with water from a heavy downpour of rain on July 29. No serious damage was done but the cut of outdoor flowers, such as sweet peas, etc., was temporarily ruined.

The Massachusetts Horticultural Society will have an exhibition of annuals and perennials on August 7 and 8 in Horticultural Hall, Boston.

Pa.—Advance Announcement of Sweet
Peas for 1910. Gives full descriptions
of the four "New Spencers" for 1910,
viz.: Miriam Beaver, Senator Spencer,
W. T. Hutchins and Prince of Wales
Spencer.

J. M. Thorburn & Co., New York.—
Wholesale Trade Price List of High-
Class Bulbs. This is a comprehensive
and carefully selected list of the choic-
est varieties of bulbs for fall planting
and winter forcing. Every bulb-flower
grower should have a copy.

The Detroit Florists' Club will hold
its annual picnic at Bois Blanc Park
on August 9th. Prizes are offered for
the winners in: Base ball game, prize
\$5.00, captains, L. Charvat and M. Bloy;
boys' race (under 10 years), 50 yards;
boys' race (under 16 years), 100
yards; girls' race (under 10 years),

men's race (200 pounds or over), 75
yards; ladies' race, 50 yards; three-
legged race; running broad jump; hop,
skip and jump; shoe string race; tug
of war; game of quoits.

ST. LOUIS NOTES.

Arthur Y. Ellison is no longer con-
nected with the Ellison Floral Co., but
is in the employ of the City Park De-
partment.

The St. Louis Florists' Club will
hold its regular meeting on Thursday,
August 12, at 2 o'clock, at greenhouses
of the Bentzen Floral Co. Officers will
be elected for the year.

W. C. Smith, who has charge of the
Florists' Special to Cincinnati over the
Big Four R. R., says he will have a
big delegation out of here for the Con-
vention City, August 16th, at 9 p. m.

The autumn exhibition of the New-
port Horticultural Society will be held
at Masonic Hall, Newport, R. I., on
September 18, 19 and 20, 1909. The
schedule of prizes is very extensive,
comprising 75 classes for flowers,
plants, fruits, vegetables and decora-
tive floral work. There are in addi-
tion eight special premiums for table
decorations, etc. Copies of the sched-
ule may be procured from the secre-
tary, D. J. Coughlin, Bellevue avenue.

Buyer's Directory and Ready Reference Guide

Advertisements under this head, one cent a word. Initials count as words.

Display advertisers in this issue are also listed under this classification without charge. Reference to List of Advertisers will indicate the respective pages.

Buyers failing to find what they want in this list will confer a favor by writing us and we will try to put them in communication with reliable dealers.

NURSEYMEN PULLING TOGETHER.

A paper read before the National Association of Nurserymen by J. H. Dayton, of Palmesville, O.

(Continued from page 171)

Why, if a tree is worth \$1.00 of any planter's money the first of April, is it worth only 20 per cent. the first day of May? Have we not deliberately educated buyers to the fact that our products have no fixed value and that our estimated value fluctuates from day to day during the season, according to the way our mail opens up, or our food agrees or disagrees with us? Why are we so anxious to dispose of a little surplus at prices far below cost and make every effort as the season advances to demoralize prices and trade, demoralize our standing in the eyes of business men and demoralize our chances of selling our next year's products on a reasonable basis? Figure it out, and you will find the ash heap one of the most profitable articles on the nursery grounds. About 99 times out of 100, it is cash in our pockets to sell what we can at a fixed profitable rate and burn the surplus, to say nothing of the better condition we are in for future trade.

As long as our price basis is that we can grow and sell as cheap as the other fellow or, indeed, go him one better, can we expect anything but meagre returns, or none? Are not the cut rates, reduced lists and cheap offers that flood our mails late every season simply an admission of our incapacity to dispose of our stock at fair and reasonable profits?

What about grades? Perhaps no one standard will be adapted to every section, but is it beyond the capacity of this body of men to fix and put in operation a system of grading that any man can learn and apply and that will make us reasonably sure of what we shall find in our cars and boxes when delivered?

What about buyers at wholesale? Who are entitled to trade prices? Would it not be possible to have a list of actual wholesale traders, revised from year to year? Is the man who occasionally buys a few trees from his neighbor, or who every year disposes of the products of a few acres of small fruits entitled to trade rates and surplus lists?

Take our own state (Ohio), last year 567 applications were made for certificates, 509 issued. Of these 87 cultivated ten or more acres; one-1.8 of an acre; 82-one acre or less; the large majority of small fruit growers who sell nothing but their surplus plants, yet their names find their way into our mailing lists as nurserymen.

Are the public institutions, parks,

etc., who buy one to three large bills for the planting of their grounds entitled to same rates as fellow nurserymen? Why not decide and have some ruling that we could all know and understand, instead of as at present, being everyone a law unto himself?

What about the man who buys an estate and pays the landscape architect a large price for planting plans and supervision? Should we supply the stock at lowest trade rates, assuming as we have to, all the risk and rebates expected by the retail purchaser? Ought we not to fix our own terms and methods of handling this business instead of allowing another organization to dictate them to us?

Perhaps none of these things and none that might be mentioned could be changed to suit us in one or two years, but taken up in a spirit of fairness and co-operation by the majority of the nurserymen at this Convention, any or all of them could be made practically obligatory for the entire trade in a few seasons.

We trust each other in every way, until we come to the marketing of our products, when we usually act as though we thought every competitor had the principles of a Sioux Indian, and was out with his little tomahawk to do us up and hang our bleeding scalp in the sacred precincts of the Bankruptcy Court.

No nurseryman can live to himself alone; anything that hurts one firm hurts all, any method adopted by one or more that elevates the business and standing of one firm elevates all. Should we not stand together, or rather move forward together, co-operating not only with one another, but with all kindred organizations, not only to receive some of the results hinted at here, but in connection with the Civic Improvement bodies, Council of Horticulture, or any or all agencies where the object is to make a cleaner, brighter and better planted America. Every back yard cleaned and planted, every scholar interested in a school garden, every farmer shown the possibilities of fruit culture, are bound to extend our business and make a better outlet for our stock.

Do not think I have no faith in our business or in my fellow tree man. Everyone on the program has a dispensation to knock a little. All of us, who have for years been trying to reach an automobile income, and have been sweetened by adversity until we now have all faith in walking as an exercise and a sure way to get there, all know that through our organization much has been accomplished; that there is a better understanding, more of a disposition to look at things with the other fellow's eye, a strong

desire here and there to get together to put the nursery interest on its proper plane. We have done many things, we can do many more.

Stay over a few days, you fruit tree men, and visit the orchards of western New York. Note the evidences of prosperity, the methods of care, the security evidently felt by these men, that in planting new orchards they will receive trees of the grades and varieties they buy. Who furnishes the trees? The nurserymen.

Go to the large peach tree belts of Delaware, Georgia, Texas, Ohio, Michigan or other states, and note the thousands of cars shipped of the varieties best adapted to their locality and market, and again, the trees come from the nurserymen. Drop into the best fruit stores and feast your eyes on the Jonathan, Spitzenburg, McIntosh, Belleflower, etc., from the orchards of Colorado, Montana, Oregon and Washington. Read of the wonderful development of these sections and the fortunes made, and the nurserymen grew the trees.

Visit the estates about Boston, Newport, Philadelphia and other cities, the parks and grounds of public and private institutions, all over our country; their landscape architects have called on the nurserymen for the great variety of trees, shrubs and plants, to develop the wonderful effects and magnificent open air paintings and have not been disappointed.

Figure up what the nurserymen have received for it all, and tell me, is it not time we dropped out of mind and heart our mutual suspicions and distrusts and filled the space with good will and faith in our fellow nurserymen, and pulling together put our business and organization not only on a plane with others, but as much higher as the privilege of dealing in God's best gifts to man entitles us to go.

NATIONAL APPLE SHOW.

One thousand dollars and a gold medal banner, with \$500 in gold and a silver medal banner to the second and a massive silver loving cup and a diploma to the third, are offered as the capital prize for a car of 210 barrels or 630 boxes of the best commercial winter apples, one or more standard varieties, exhibited by any owner, lessee or agent of the land where the fruit was grown, at the second National Apple Show in Spokane, November 15 to 20. Competition is open to the world. Four points will be considered by the judges in making the awards, as follows: First, value of the varieties for the purpose to which they may be adapted; second, color, size and uniformity of fruit; third, freedom from insect marks and other blemishes; fourth, excellence in pack. The rules of the American Pomological Society will govern all commercial contests.

Prof. W. J. V. Osterhout, who has been connected with the botanical department of the University of California for 15 years, has accepted a similar post with the department of botany of Harvard University.

IS YOUR NAME IN THE ABOVE LIST? IF NOT, WHY NOT?

PARK IMPROVEMENT FOR WASHINGTON.

Plans are being matured for a thorough improvement of the river front of Washington. These provide for a park system along the picturesque Potomac and the beautification of both sides that will be a credit not only to Washington, but to the nation.

By the terms of a recent decision of the supreme court, the national government has entire control of the city's lands bordering upon the river. Establishment of Potomac Park was the beginning of improvement, and if Congress shall approve of the latest plans, it will not be long before the river front of Washington will be a source of pride.

It is proposed in time to have a splendid driveway and promenade, a scheme which, it is believed, will lead to the extension of the city to the other side of the Potomac.

Potomac Park is only the beginning, and similar recreation places will be established along the river front not available for commercial purposes. Along the upper Potomac, too, it is proposed to make parks.

IRONDEQUOIT PEACH PROSPECTS.

Irondequoit (N. Y.) peach growers are optimistic. Their orchards are loaded with fruit, promising a larger yield than last year, and may be as heavy if not heavier than two years ago, when there was an unusually big crop.

W. T. Rudman in an interview, estimated this season's crop at 15,000 baskets, as compared with 12,000 baskets last season, notwithstanding that a good many peaches dropped early in the season.

"The principal varieties are Crawford and Elbertas, which are supplemented by earlier varieties such as Early Rivers.

"Stimulated by the good rains recently, the crop is making favorable progress. The early varieties are nearly ripe. But the two chief varieties—Crawfords and Elbertas—will not be ripe before the last week in August. September is the big peach month here."

Other large growers who have good peach crops here are George H. Rudman and Charles H. Coy. Mr. Rudman has almost as many bearing trees as W. T. Rudman (30 to 35 acres), while the Coys have probably 15 acres of bearing trees.

The Pacific Coast Association of Nurserymen at its annual meeting July 15 at Seattle, elected officers as follows: President, S. A. Miller, Milton, Ore.; secretary and treasurer, C. A. Tonneson, Tacoma.

WANTS, FOR SALE, ETC.

Advertisements in this column one cent a word. Initials count as words. Cash with order. All correspondence addressed "care HORTICULTURE" should be sent to 11 Hamilton Place, Boston.

HELP WANTED

GOOD MEN

When you need good men, skilled or unskilled, Write:

THOS. H. BAMBRICK

34 South 7th Street Philadelphia

Help of all kinds, including that for Florists, Nurserymen, Seedsmen and the Horticultural trade generally.

HORTICULTURE needs a wide-awake representative in every town in the land. Good commission paid on advertising and subscriptions. If you are ambitious, write for terms.

WANTED—Experienced grower for commercial place near Boston; must be good grower of carnations especially. Good salary to the right party. Address, with references, Carnations, care of HORTICULTURE, 11 Hamilton Place, Boston.

SITUATIONS WANTED

SITUATION WANTED—I have 16 years of horticultural experience in care of private estate and as grower of orchids and all kinds of in and outdoor growing and in florist's and landscape work. I am thirty-two years of age; married; no children; Swedish (American citizen). References. Particulars in first letter, please. L. M. G., 36 Rockdale Ave., New Rochelle, N. Y.

FOR SALE

For Sale Greenhouse Property

Located at Somerset and Howard streets, North Plainfield, Somerset County, New Jersey. Dimensions 248 x 106 ft. Contains three greenhouses 20 x 175 ft., steel frames. Trolley lines pass property. Will sell cheap and on easy terms. For particulars apply to F. B. DAILEY, care F. BERG & CO., - - Orange, N. J.

FOR SALE—Very valuable greenhouse property at a bargain. Easy terms. 20 acres, 19,000 feet of glass, 9 greenhouses, steam heat; located near Chicago. Wholesale trade. Shows handsome profits. Closest investigation invited. Owner engaged in other business. A snap for a practical greenhouse man with a little ready money. Address Frank P. Graves, 1587 First National Bank Building, Chicago.

FOR SALE—Special 16 x 18 and 16 x 24 double thick glass in "A" and "B" qualities. Buy now and save money. Write PARSHESKY BROTHERS, INC., 50 Montrose Ave., Brooklyn, N. Y.

FOR SALE—1-8 section Weathered boiler in good condition; nearly new. N. F. McCarthy & Co., 84 Hawley St., Boston, Mass.

MISCELLANEOUS

I WANT to lease at once, greenhouse establishment in good repair, in retail district. Would buy later. No fancy price nor tumbled down shacks, as I am a practical man. State full particulars in first letter—size of houses, glass, land, rent, etc. L. H. Wise, 1 Montgomery St., Jersey City, N. J.

BORERS IN MAPLE TREES.

Former State Senator Henry D. Saylor, of Montgomery County, wrote from his home in Pottstown to State Zoologist Surface, of the Department of Agriculture, Harrisburg, as follows:

"I write for information about an insect that has just attacked some Norway maples belonging to me by boring holes in the trunks and large limbs, the holes being clean cut about the size, in circumference, of a darning or steel crochet needle. I have been unable to see the insect that is causing the mischief. My attention was first called to the matter by the drooping appearance of the trees, and the presence of white spots on the trunks and limbs where the boring occurred."

This letter was answered by the State Zoologist as follows:

"Replying to your letter, I can not say with certainty what the pest is that is infesting your Norway maple tree without seeing it. However, it is evidently a borer, and perhaps a bark borer or engraver beetle. If it be this, it shows that the tree is declining, and this borer practically attacks only declining or injured trees. I would advise digging about the trees, mulching them, pruning off dead and dying branches, and watering well with water containing a teaspoonful of nitrate of soda to each gallon of water. If the borers be large enough that you can find their holes and insert the tip of a small machine oil can into them, you can easily kill the pests by injecting a little carbon bisulfide into each hole, and then stopping this with clay or mud. For this particular tree, I would recommend pruning, watering, cultivating and trying every means possible to stimulate it to vigorous growth, in order that you can make it outgrow the effects of the pests you mention. If you will send me some for examination, I shall be glad to reply promptly concerning the same."—Zoological Press Bulletin.

NATIONAL INSPECTION LAW NEEDED.

The necessity for a national inspection law which would prevent the ravages of woodlands by such destroyers as gypsy and brown-tail moths is pointed out by Dr. L. O. Howard, chief of the bureau of entomology, who has just returned from an extensive trip abroad, where he inspected a number of exporting nurseries. Dr. Howard has imported and sent to the parasite laboratory at Melrose Highlands, Mass., many of the parasites and other natural enemies of the gypsy and brown-tail moths, and these will be scattered throughout the New England forests, where the pest is most prevalent.

It is declared at the bureau of en-

tomology that the United States is almost unique in its indifference to the great danger of importing injurious insects, as quarantine and inspection laws are in force in nearly all the civilized countries of the world.

CONCERNING STRAWBERRY PESTS.

State Zoologist Surface of Penna., has received many inquiries concerning strawberry pests, and to these has replied that the best general means of suppressing them lies in a novel method of summer treatment of the strawberry plant, which many persons would hesitate to apply, but which they will find so effective that it will become a regular feature of their mode of culture after its benefits have been observed. This consists of nothing more nor less than mowing the strawberry leaves as low as possible shortly after the berries are picked, throwing these together with a little straw between the rows, drying them quickly on a hot, sunshiny day, and then burning them at once.

The strawberry leaf rust and leaf spot are among the diseases that are very destructive and contagious. They can be partially prevented by the use of the Bordeaux mixture, but the germs causing the leaf destruction remain in the old patch from one year to another. Also, the aphids and several other insect pests attack the leaves during the summer. It has been found that if the leaves are mowed closely on a warm, dry day, and slightly dried and mixed with just a little straw and then burned, the pests are practically all destroyed, and the plants themselves escape uninjured. Consequently, this is the time of year to give such treatment.

Good new runners will be formed at once; especially, if a little commercial fertilizer or finely-divided manure from the stable or poultry house be scattered over the roots of the old plants and these be cultivated in the regular manner. New leaves will yet be formed this season, and the plants will be put in good condition for bearing a much more abundant and a healthier crop next year than if the leaves had not been burned. Persons who doubt the efficiency of this treatment should mow the leaves of some of the plants, and see the results for themselves.—Zoological Press Bulletin.

Addison County, Vermont, is suffering a scourge of grasshoppers such as this state has never known. There are millions of the insects and the farmers have no way of combating them. The insects are eating the short hay crop faster than farmers can harvest it. Grain fields are also being attacked. The loss will reach thousands of dollars.

GREEN-STRIPED MAPLE WORM.

Maple trees are attacked by a number of insects, the worst of which are the fall webworm and the caterpillar of the tussock moth. Another troublesome pest of all kinds of maple is the green-striped maple worm, which eats the leaves, often defoliating the tree entirely. This is a naked caterpillar, yellowish green, nearly two inches long. The moth of this caterpillar is of a beautiful pale yellow shaded with delicate pink. The spread of wing is about two inches.

The insect abounds especially in Kansas, Nebraska, Missouri, Illinois, and Iowa, but is found also in the Gulf States and in the North and East. In Missouri there are two broods in a year and each female moth lays at least 150 eggs.

Some birds eat the green-striped maple worm, such as the robin, bluebird, tufted titmouse, red-headed woodpecker, and others. These should be protected.

Paris green sprayed on the trees will kill the young caterpillars; one pound to 50 gallons of water may be used, but one-half pound will probably be sufficient. Arsenate of lead may be used as strong as 2 to 4 pounds for 50 gallons of water.

A trench dug about the tree a foot deep, with sides sloping under will trap large numbers of caterpillars as they leave the tree in search of a place to bore into the ground and enter the pupa stage of their life. In the trench they can be easily killed.

This insect is more fully described in Circular 110 of the Bureau of Entomology, U. S. Department of Agriculture.

ANT HILLS IN GRASS PLOTS.

The superintendent of a cemetery in Pottsville wrote to the Pennsylvania State College in regard to the trouble that was being experienced by some of the lot holders in that cemetery through ants building hills on the lots and destroying the grass.

The letter was referred to Prof. Surface, State Zoologist, Harrisburg, who gave the following information:

"You can get rid of these pests with certainty, and very easily, by making holes in the ant hills to a depth of a foot or a foot and one-half, and pouring in a liquid known as carbon bisulfide or bisulfide of carbon. Use about one-half teacupful of this to each hill, making the holes two or three feet apart, in accordance with the size of the ant hill and the porosity of the ground. For a heavy clay soil, they must be nearer, but for a light, sandy soil, they can be nearly three feet apart. These holes can be made with a sharpened stick. A broom handle, pointed at the end, will answer the purpose. After the liquid has been poured in, close the holes with earth, and also keep the mound covered with a wet blanket for an hour or two. The carbon bisulfide will not injure vegetation, but it will kill the ants."—Zoological Press Bulletin.

"Every Bug Has His Dose."

Insect-destroying preparations that do their work well and effectively are the cheapest. Bowker's Arsenate of Lead and Bowker's Pyrox are recognized standard insecticides and fungicides for both indoor and outdoor use. Bowker's Insect Emulsion destroys many kind of plant lice, black and green flies, etc. Call or send for catalogue.

PRACTICAL CEMENT BENCHES.

The greenhouses and nurseries of the Geo. Wittbold Co., at Edgebrook, occupy a place of 32 acres, 12 miles from the heart of Chicago, which eight years ago was a virgin forest. The grounds are planted with shrubs and trees. The greenhouses comprise about 70,000 square feet of glass.

The wooden benches are now being replaced by those of cement construction of the sectional type, after a design perfected by Otto Wittbold, who is in charge of the place. The posts are 4 inches square at the top and 8 inches square at the bottom and 2 feet high, set 5 feet apart from center to center. The side pieces are "L" shaped, 4 inches at bottom, 8 inches high and 1½ inches thick, reinforced by chicken wire and three rods of telephone wire, and are in sections 5 feet long. The bottom pieces are 1 inch thick, 8 inches wide, 58 inches long, reinforced with two rods of telephone wire and placed crosswise of the bed the ends resting on the side pieces. The centers are supported by a piece of 2x4 cement made in any length desired, running lengthwise under the bench and resting on posts of cement. These are also reinforced by two heavy twisted strands of telephone wire.

In reply to a question Mr. Wittbold stated that he mixed the cement in the proportion of one part cement to three parts coarse sand or gravel used quite wet. At the present price of material the cost is \$60 for bench 5 feet wide, 150 feet long, including all labor for making and erecting.

NO. 7

CINCINNATI

CONVENTION NUMBER 1909

The Florists' Supply House Of America

**1885
FIRST THEN**

**1909
FIRST NOW**

The only house now engaged
in the

**General Florists'
Supply Business**

that had an exhibition at the

**First Cincinnati
Convention**

Extract from Report of Committee
on Florists' Supplies, Cincinnati,
Ohio, 1885

Report on Florists' Supplies

"The Committee desire to call the attention of the Society to the great strides that have been made in the past ten years in the way of artistic designs and true elegance in form of baskets and other receptacles for cut flowers. We would strongly recommend a careful examination of the exhibits of these goods, and are sure that the time thus spent will not be wasted. There is no pursuit followed by mankind, not even music, painting, or sculpture, which can claim a position in high art above our own business here represented, and the firms which have favored us with these exhibits which in many cases are the result of their own untiring thoughts and ingenuity, show to the world convincing proof that among our number are to be found many true artists."

The Exhibit of
M. Bayersdorfer & Co.
in this department was
awarded a Certificate of Merit

IT is a quarter of a century since the Society of American Florists was organized. During the whole of its existence we have maintained our position with the florists' trade of America as the foremost house engaged in the florist supply business.

Each Year wherever the Convention has been held

Bayersdorfer & Co.
HAVE BEEN THERE

with a suitable display of all that was new, novel, meritorious and indispensable to the florist.

Many certificates and diplomas have been awarded to our exhibits of baskets, sheaves, vases, jardinières, immortelles, prepared flowers, etc.

On this anniversary occasion we shall outdo ourselves with a rich and comprehensive display, including importations which are now arriving, of the best European novelties in every line of florists' goods. This exhibit alone will be worth going to Cincinnati to inspect and select from.

Have you received a copy of our catalogue?

WHAT?

Bargains in good stock.

ORCHIDS

Arrived a large shipment of **CATTLEYA SCHROEDERAE** in splendid condition; we offer these in case lots of 400 bulbs at \$85.00.

Another and last shipment of the season of **CATTLEYA LABIATA**; this popular orchid is getting scarce; we offer these at \$50.00 per case. Buy these now, next year they will cost you more money.

CATTLEYA Percivaliana. A few cases of fine plants left unsold, these we quote at \$48.00 per case.

CATTLEYA Trianae. About ten cases of fine plants left unsold, these we quote at \$48.00 per case.

CATTLEYA Mendellii. Two cases left only, at \$75.00 per case.

CATTLEYA Speciosissima. These we offer at the low price of \$40.00 per case.

BRASSAVOLA Digbyana. Plants with 5 to 6 bulbs, \$9.00 per dozen; \$60.00 per 100. Plants with 7 to 10 bulbs, \$12.00 per dozen.

EPIDENDRUM Vitellinum Majus. Plants with 8 to 9 bulbs, \$7.50 per dozen, \$50.00 per 100.

LAELIA Aneaps. Fine plants with 10 to 15 bulbs, \$18.00 per dozen, \$125.00 per 100.

LAELIA Autumnalis. Fine plants with 6 to 9 bulbs, \$15.00 per dozen, \$100.00 per 100.

LAELIA Albida. Fine plants with 6 to 10 bulbs, \$12.00 per dozen, \$75.00 per 100.

CHYSIS SPECIES. A limited number only; fine plants with 6 to 8 bulbs, \$9.00 per dozen.

We respectfully invite you to visit us at the Convention and inspect our line of samples.

LAGER & HURRELL, - Summit, N. J.

VANDA Coerulea (The Blue Orchid). Fine well-leaved plants, 12 inches long, \$18.00 per dozen, \$125.00 per 100, 16 to 18 inches long, \$24.00 per dozen, \$175.00 per 100.

ONCIDIUM Incurvum. Fine well-leaved plants, with 9 to 12 bulbs, \$12.00 per dozen, \$90.00 per 100.

ONCIDIUM Splendidum. Extra fine stock, with 4 to 5 heavy bulbs, \$18.00 per dozen, \$125.00 per 100.

DENDROBIUM Formosum Giganteum. This is the finest lot of plants ever arrived here. Plants with 6 to 8 bulbs, \$18.00 per dozen, \$125.00 per 100. Plants with 9 to 12 bulbs, \$30.00 per dozen, \$200.00 per 100.

MILTONIA Candida. Superb plants with 6 to 8 bulbs, \$18.00 per dozen. Superb plants with 9 to 12 bulbs, \$24.00 per dozen. Larger masses, \$3.50 to \$5.00 each.

MILTONIA Spectabilis. Large masses at \$5.00 each; or smaller plants at \$1.50, \$2.50 and \$3.50 each.

MILTONIA Flavescens. Large masses at \$5.00 each; or smaller plants at \$2.50 and \$3.50 each.

FORTUNES IN FIG ORCHARDS

E. C. Robertson

General Sales
Manager

501 Kiam Bldg., Houston, Texas

Texas Figs Are World's Fair Winners

The famous fig preserves made at Aldine, near Houston, are the finest and best known in the world. One important thing which must not be overlooked is that fig orchards never fail to produce large, profitable crops here.

One Acre Set in Figs and one Town Lot, both for \$230, Payable \$10 down and \$10 per month, without interest. No payments when sick.

CLEAR WARRANTY DEED IN CASE OF DEATH

Local cash market for fruit. Single crop pays for land and lot. Money back in four years with annual income thereafter for life. Better than banks, bonds, or life insurance. If you want to enjoy life in South Texas under your own "vine and fig tree," or make a safe and profitable investment, write for further particulars. Orange Groves on similar terms.

WHITE ORCHIDS

Are always valuable for Florists:

Coelogyne Cristata Chatsworthii. Strong, healthy plants in 4, 5, 6, and 7 inch Pots. Ready to flower the coming Winter.

\$1.25, \$1.50, \$2.50 and \$3.50 each. Will give many flowers

Rocky Mountain Rambles

VIII.

The flora of the Cascade Mountains of Washington is much like that of western Oregon. There are forests of Douglas Fir, or, as it is known in Washington, the

Oregon Fir (*Pseudotsuga Douglasii*) with undergrowth of Hemlock, Young Oregon Firs, Yews (*Taxus brevifolia*), Pines and Conifers, Vancouver, Washington

Washington Fir, while in Oregon it is commonly called the Oregon Fir. That is the commercial name for the timber. The magnificent forests of this species in Washington do not have an equal anywhere else in the world; and this is not surprising if we take into account the rainfall which in the Puget Sound country is about fifty-three inches, while up in the higher Cascades, near Seattle, it is one hundred inches and even reaches one hundred and fifty inches. Under such climatic conditions the seeds of trees germinate readily and grow at once and all trees continue to make a vigorous growth. These great forests then are due to the climatic conditions of the region. On the east slope of the Cascades the rainfall is much less, and one finds here the Bull Pine (*Pinus ponderosa*) interspersed with beautiful White Pines (*Pinus monticola*) which sometimes reaches a height of 200 ft. and a diameter of 6 ft., although there are many trees over 100 ft. high and 3 or 4 ft. in diameter. The tree resembles our eastern White Pine but is more slender and with slender spreading or somewhat drooping branches; like the White Pine, the leaves are in fives but the leaves are bluish-green and glaucous.

It is a more beautiful tree than its eastern cousin. The Balm of Gilead Poplar is common; brambles, rose and salmon berry abound in the woods.

Farther eastward we have an elevated plateau made up largely of disintegrated lava beds. The summers are hot and they have brief cold spells in the winter but these are tempered by the chinook winds. The Palouse, Spokane, Yakima, and Walla Walla countries are well-known. Almost every agricultural crop grown in temperate regions is grown successfully here without irrigation. It must not, however, be assumed that the great small-grain fields can be cultivated with the same crop year after year; it has, therefore, become a common practice to summer fallow. The region, too, has become famous, where irrigation is practiced for its growth of horticultural products. Apples, pears, strawberries and other small fruit are abundantly grown in the region. The raspberries and blackberries are especially large and delicious. The Yakima region is especially famous for its fruit, but it is by no means the only region in eastern Washington adapted to the growing of fruits; in recent years other regions have become equally famous.

The forests of the Cascades on the coast may consist of many pure stands of the fir with many trees 8 and 9 and even 10 to 12 feet in diameter or they may be interspersed with the Western Hemlock (*Tsuga hetero-*

Washington Cedar (*Thuja plicata*). Used largely for making Shingles, Takoma, Washington.

phylla) from 2 to 6 ft. in diameter and from 100 to 200 ft. high, or the Washington Cedar (*Thuja plicata*), a magnificent and graceful tree from 100 to 200 ft. high and from 2 to 12 ft. in diameter at the base, and a

Cedar River near Seattle, outlet of Cedar Lake. Spruce, Hemlock, Fir and Alder

large fir (*Abies grandis*) and an occasional spruce (*Picea*). The forests reach to the very edge of Puget Sound and skirt the shore lines of the streams and lakes.

Seattle and Tacoma, the two thriving cities upon Puget Sound, are blessed with many natural advantages. Puget Sound is one of the most beautiful bodies of salt water in the world, and Seattle has the additional advantage of several fresh water lakes, Lakes Union and Washington. It is really a pity that the trees in Seattle and Tacoma have long since been removed and it has become necessary to replant the cities with trees. Both in Tacoma and Seattle and in this part of Washington, flowers bloom in every month of the year. In the far distance from these cities in the Cascades are beautiful mountain streams and waterfalls. The city of Seattle has acquired the region about Cedar Lake from which it gets its supply of water and some of its power to run the electric light plant. The lake is surrounded by steep and precipitous bluffs covered with a magnificent growth of timber. Coming from this lake and passing down through a deep gorge is the Cedar River, a beautiful stream of sparkling water, lined with the forest primeval. For eleven miles along this stream the Chicago, Milwaukee and St. Paul Railway has built its road to gain entrance into Seattle. It is to the credit of Seattle and Tacoma that they have set aside considerable areas for park purposes and that they have preserved in these parks some of the original forest trees. The gentle

hills, valleys and gorges are ideal locations for parks, and in the far distance from Seattle and Tacoma is Mount Rainier National Park. On a clear day—but the summer days are usually hazy—the majestic, snow-capped, glaciated peak of Mt. Rainier may be seen from these cities. It is, without doubt, the most superb mountain in the United States proper. Paradise Valley in the Mt. Rainier National Park, may be reached by railroad from these places and by stage. It is, indeed, a veritable paradise of plants.

Northern Idaho, through which one passes by taking the Northern Pacific eastward, is a great forest of pine consisting of White Pine, Bull Pine and Larch mixed, with many deciduous shrubs and a few trees like the White Birch (*Betula papyrifera* var.) and Alder. After reaching Sandpoint, near Lake Pend d' Oreille, you pass for miles along the Clarke's Fork, certainly the most beautiful stream in Montana. It commemorates

Clark's Fork, Montana, in Indian Reservation

Captain Clarke of the Lewis and Clarke Expedition. The stream has cut its way through a gorge and on both sides is lined with a young growth of the western White Pine and Bull Pine.

Ames, Ia.

British Horticulture

PROPOSED INTERNATIONAL FLOWER SHOW

It cannot be said that horticulturists pursue a policy of "Splendid isolation." In recent years representatives of various nationalities have met in friendly rivalry; each nation has undoubtedly profited by these pleasant interchanges of ideas. The last time that Britain has taken a leading part in an international flower show was in 1866, and the Royal Horticultural Society Council think that it is an opportune time to return some of the generous hospitality which has been extended to this country in the past from foreign horticulturists. The Society propose to shortly call a meeting to discuss the proposal, and should it receive sufficient support an influential committee will be appointed to make the necessary arrangements. It is announced that the Council, on certain conditions, are prepared to guarantee £5,000 (pounds). The leading members of the Council have made many friends on the Continent in the visits which have been paid to the foreign flower shows, and there is no doubt that the French and German gardeners particularly would be very glad to co-operate in a movement of the kind suggested. The Royal Horticultural Society has always been anxious to pursue a comprehensive policy, and to have a wide basis for its operations. With this object in view it has in years gone by sent collectors to all parts of the world, whose labors have enriched our floral possessions. In this useful work we have the record of such men as Reevesdon, Forbes, Douglas, Potts, Damper, Parks, McRae, Hartweg, and Fortune. In seeking to arrange an international show the Society is continuing its policy of avoiding insular and restricted interests.

A NEW TOMATO DISEASE

The Board of Agriculture have issued particulars respecting a new tomato disease which has been introduced in this country from abroad. The damage which the fungus is capable of doing is very serious. A crop of out-door tomatoes in Gloucestershire was entirely destroyed by it. The plants attacked show small blackish green spots on the leaves. These are irregular in shape at first, but soon become concentric, and finally confluent and the leaves, which are rapidly killed, roll up and hang loosely from the stem. The fungus also attacks the stem, the calyx, and finally the fruit itself. The Board advise the spraying of affected plants with a 3 per cent solution of Bordeaux mixture early in the morning every second day for two weeks. The spray should be in the form of a fine vapor falling upon the plants like a natural dew. The ingredients for a 3 per cent solution would be 3 lbs. copper sulphate, and 2 lbs. freshly burnt quicklime to 10 gallons of water. It is also suggested that the top soil should be removed, and mixed with fresh lime in the proportion of one barrowful of lime to five of soil. It can be replaced after the lime has slaked. When planting young tomato plants pulverized lime should be scattered on the ground round the stems. The Department also advise that any wires and props used in the house or in the open air should be slowly drawn through fire in order to kill the spores adhering to them. When no remedial measures

are taken, the whole plants may be destroyed within seven days from the first sign of the disease.

SOME NEW ROSES

At the summer show of the Royal Horticultural Society at Holland House, Kensington, there were some notable novelties in the rose section. General admiration was bestowed on the Duchess of Wellington, a H. T. of the Killarney type, and of a delightful shade of orange and gold. Walter Speed is an imposing bloom of a deep lemon yellow tint. Grace Molyneux, another H. T., of pleasing form; it is creamy apricot, with a flesh tint in the centre. This meritorious trio emanated from Messrs. A. Dickson and Sons, of Newtownards, Ireland, who received an award of merit for each. Ariel is the name of a new Rambler, which G. Paul and Sons have introduced; the blooms resemble Irish Glory, and are of a rosy-pink hue. Shower of Gold, another Rambler shown by Messrs. Paul, is of a tint midway between Alister Stella Gray and W. A. Richardson, and it is likely to prove very popular. The following other new comers were noted: Mrs. Hubert Taylor, resembling Muriel Grahame; Juliette, a hybrid from Soliel d'Or, of a carmine pink shade; Alice Cory Wright, shell pink; Cynthia, lemon yellow; Hugo Roller, lemon yellow and crimson pink; Mrs. Philip Le Cornu, a deeper shade of color than Mrs. W. J. Grant; Jessie, a new polyantha, of a scarlet red tint; Beatrice, of a color between Sunrise and Beaute Inconstante. Altogether the visitors had every reason to be satisfied with the wide range of novelties provided for their delectation.

ITEMS OF INTEREST

Arrangements are already being made for laying out a portion of the grounds in the Japanese style at the White City for the Anglo-Japanese exhibition next year, the inaugural banquet of which has lately been held. Owing to the unfavorable season the strawberry crop has been disappointing. Many of the growers have sustained heavy losses.—The Fruit and Floral Committee of the Royal Horticultural Society recently celebrated its jubilee by holding a banquet under the chairmanship of Sir Trevor Lawrence. Mr. George Bunyard, the Chairman of the Committee, has been presented with his portrait in celebration of the event. The picture is to hang at the offices of R. H. S., at Westminster, where the portraits of several horticultural worthies adorn the wall.—Miss Stella Frost, a pupil at the Thatcham Fruit and Flower farm, has gained the gold medal of the Royal Horticultural Society's public examination in horticulture.—The flower trade at Covent Garden has lately been very slow, owing to the glut of sweet peas, which are being grown for market in increasing quantities; roses have also been superabundant.

W. H. Adsett.

Roses Under Glass

SEASONABLE CULTURE OF MY MARYLAND

Of the new varieties recently disseminated, Maryland perhaps has attracted the greatest amount of attention and its progress this season will be watched with keen interest—and some qualms, perhaps—by those who have gone in for it. Much has been said and written about this variety, adverse and otherwise, and while those who have failed to do well with Maryland may be excused for their unfavorable comments there is every reason to

believe that this rose can be grown successfully and from a financial viewpoint satisfactorily.

Maryland is a profuse bloomer! Of this there can be no doubt and this very quality coupled with the greed of those "grumblers" is doubtless responsible for their failure to cut heavy crops during the winter. When we consider that each plant makes from eight to twelve or more buds each crop, it is quite obvious that the taking of such a tremendous crop at once is bound to administer a severe check to root action and while it may recover from one such shock, a second will undoubtedly weaken the stock to the extent that it will make but little growth until near the end of the season, when nature reasserts itself and almost anything will grow.

If the disbudding were done from the beginning with a view to maintaining the growth at different stages of development, the crops would not be so large, but the check to root action would be less severe and in the end the quantity of flowers taken would equal if not exceed the cut from plants that cropped straight through the season.

Maryland is a rapid grower and rather a heavy feeder, and large supplies of water are necessary to keep the food in an assimilable form. It is very important that this liberal use of water be attended by frequent stirring of the soil to keep it sweet and free from cakeing.

Of insect pests red spider is about the most troublesome during the summer months and advantage should be taken of every bright day to give the young stock a thorough syringing. In hot weather, a second syringing or spraying in the afternoon is of great benefit, helping to cool the house, recharge the air with moisture, and giving to the foliage that firm, rubbery texture so characteristic of well grown Maryland.

J. E. Simpson

Rehmannia angulata

See Supplement

This beautiful half-hardy herbaceous perennial was recently introduced from central China by James Veitch & Sons through their collector, E. H. Wilson. The flowers are produced in abundance and individually resemble much those of *Incarvillea Delavayi*, as shown in the colored plate issued as a supplement with this number of HORTICULTURE.

By making sowings of the seeds in March, or early in April in heat, and pricking-off the seedlings as soon as large enough to be handled, they may be had in flower in August. When grown in pots the cultivation is the same as that for the fuchsia. The propagation of the plant from cuttings is to be preferred to seed sowing, and the young plants come quickly into bloom. The cuttings should be struck in small pots singly and given bottom heat. Cuttings taken in February and March are ready, under good management, for planting out in May in the open air. An open spot should be selected for the bed or group. If florists would take up the pot culture of this plant they would doubtless find it a ready seller.

Frederick Moore

Notes from the Arnold Arboretum

Very few of the numerous species of the genus *Buddleia* widely distributed through the tropical and subtropical regions of Asia, Africa and America are tolerably hardy in this latitude. One of them is *Buddleia japonica* which is in cultivation since many years, but it is not so particularly ornamental, as the dull lilac flower spikes are not very showy. Much more beautiful, however, is the recently introduced *Buddleia variabilis* from Central China. It is a graceful shrub from six to eight feet high with upright or spreading and often arching branches, clothed with handsome foliage dark green above and silvery white beneath, lanceolate in outline and from four to ten inches long. The lilac fragrant flowers are borne in dense spikes from four to six inches long, the individual flowers being small and colored orange in the centre. Studded at the tips of its branches and branchlets with its long lilac flower clusters the shrub presents a graceful appearance and is the more valuable, as it blooms during August and September. Unfortunately it is not perfectly hardy here, but even if killed to the ground, vigorous young shoots spring up again and usually bloom profusely the same year. In addition to the type two superior varieties have been introduced more recently. *Buddleia variabilis Veitchiana* is more robust, the flower spikes are longer and denser, sometimes measuring over two feet in length and the more richly colored flowers have a brighter orange centre. *Buddleia variabilis magnifica* has bright violet purple flowers with a deep orange eye and more constricted spikes, otherwise it is much like the preceding variety. The latter variety is the earliest to bloom, then follows var. *magnifica* and after the type which is the next comes a still later form, var. *Wilsoni*, which has not yet flowered at the Arboretum; it is said to have the largest flower spikes of all, over two feet long, and the flowers are of bright rose lilac color with an intense orange centre. There are also some other recently introduced species which have not yet flowered at the Arboretum; one is *Buddleia nivea*, remarkable for the white fluffy covering of the stems and the under surface of the leaves, while the upper side is dark green and nearly smooth; the flowers are not very showy, small and lavender-blue and partly hidden in the white tomentum of the inflorescence. Another is *B. albiflora*, but not white-flowered, as the name seems to indicate, the flowers being pale mauve coloring with orange centre. It much resembles *B. variabilis*, but is less beautiful than the varieties of that species.

As a new form of a well known native late-flowering shrub mention may be made of *Clethra alnifolia rosea* which is now in cultivation at the Arboretum, and though it has not yet flowered here, I had the opportunity of seeing fresh flowers from the Watuppa Lake near Fall River where this form was discovered several years ago. The flowers are flushed with pink outside, while in bud they are bright pink. It will make a pleasant contrast if planted together with the white-flowering type. *Clethra alnifolia*, White Alder or Sweet Pepperbush, is a handsome shrub and to be recommended for its late spicy flowers. It should, however, not be planted in too sunny and dry situations, as the foliage in such localities is often disfigured by the red spider and the shrubs look then rather unsightly. It grows naturally in swampy soil.

Alfred Rehder

SUPPLEMENT HORTICULTURE
VOL. X. NO. 7, AUGUST 14, 1904

REHMANNIA ANGULATA
PINK PERFECTION.

Odontoglossum Insleayi

Odontoglossum Insleayi makes a nice companion to the ever popular *O. grande* or "Baby Orchid." It requires similar treatment to *O. grande* and flowers at about the same time. While the flowers are not as large as those of *O. grande*, they are nevertheless very attractive. The sepals and petals are greenish yellow barred and blotched with chestnut brown; the lip is bright golden yellow, bordered with cinnamon red spots. In habit of growth it very much resembles *O. grande*.

Here the plants are grown in a cool house where azaleas and other plants requiring similar conditions to grow in are kept all the year around. In this house the temperature ranges in winter from 45 degrees to 50 degrees at night, with a rise of 5 degrees to 10 degrees during the day, according to the amount of sunshine available. From the time the flowers have developed until the plants start to grow again in spring very little water is given, but during their growing season they are freely watered and if time permits they are dipped in weak liquid manure about once or twice a week. These plants, like most all of the Mexican orchids, like plenty of sunshine all the year around; ground glass gives all the necessary shade here.

Osmunda fibre is used in small quantity for a compost.

Naugatuck, Conn.

M. J. Ope

Transatlantic Plant Notes

IVY-LEAVED PELARGONIUMS

An improved race of *P. peltatum* has come into commerce which is likely to supersede the scendent varieties. The habit of growth of these newcomers is compact, the trusses of flowers larger, and consisting of a greater number of "pips," and the colors more varied. The older varieties are admirable subjects for clothing a wall, suspending from a glasshouse rafter or principal, attaching to a supporting pillar, or as a filling for baskets, windows or balcony boxes; but as portable subjects for the conservatory, or apartments, they are not exactly fitted. Of varieties of this new race I may mention Mrs. Hawley, a rosy crimson, semi-double flower, produced to the number of 6 to 8 in a truss supported on moderately long stout petiole; Sabrina, a single-flowered, scarlet variety; Resplendent, with double flowers of a rosy crimson tint, the truss of a large size; Colonel Baden Powell, of a lilac color, dotted with crimson—a beautiful flower. Others of fine quality are Hector Giacomelli, Mrs. W. H. Martin, semi-double and Southgate

Perfection. The leaves of these varieties are of remarkable substance, and of a vivid green color.

NYMPHAEA MOOREANA

A species of *Nymphaea* under this name was shown at the recent meeting of the Royal Horticultural Society by J. Hudson, gardener to Leopold de Rothschild. It seemed to be an improvement upon *N. Marliacea chromatella*, a straw colored variety, having bright orange stamens, fragrant, and a continuous bloomer during the warmer months. *Nymphaea Mooreana* has deep yellow flowers, and is equal to *N. chromatella* in floriferousness; the leaves are of great substance, without any mottling; the blossoms when open are more globular, and the petals of greater width. The plant is an acquisition to the race of hardy water lilies, and was sent to Mr. Hudson by a correspondent residing in Australia some few years ago. We thus have a native of sub-tropical Australia proving itself capable of succeeding as an ordinary inmate of a garden lake in southern England, with its somewhat severe winter climate.

The birth of the S. A. F.

The conception of the organization of a national association devoted to the interests of ornamental horticulture which had its origin in a conference between John Thorpe and E. G. Hill at Cleveland some six years previous took practical form at a meeting in Chicago, June 19, 1884, at which thirty or forty gentlemen were present. Although organization was not fully effected until the convention at Cincinnati in August of the following year yet the definite existence of the Society of American Florists is conceded to have begun at the somewhat informal Chicago gathering, hence while the Convention of 1909 is practically the 25th anniversary of the Society's birth, but twenty-four years and not a quarter of a century as has been several times thoughtlessly stated, have elapsed between the two Cincinnati events. The direct work of outlining the business for the first convention devolved upon an executive committee meeting held at Pittsburgh, Pa., in February, 1885.

The field as planned

We use the expression "ornamental horticulture" above, with full intent. The addition of the words "Ornamental Horticulturists" to the title of the Society a few years ago has been interpreted by many, either in sincerity or for a purpose, as indicating an attempt to divert the organization from the ideals of its founders as set forth in the original name of "Society of American Florists." In refutation it is only necessary to call attention to the sentiments and wording of the original call for the Convention held at Cincinnati in 1885, of which we are pleased to be enabled to present a "fac-simile" in this issue of HORTICULTURE.

The path of progress

With the foregoing brief notes on phases of the Society's beginning we propose to discontinue consideration here of the history of the organization. So much has been already written from time to time on this subject that we are satisfied that our readers, who, we presume, are not particularly hungry for statistics, are already sufficiently conversant with what the S. A. F. has been doing during its twenty-five years of useful life. The only further reminiscence we shall indulge in will be a rather sketchy summary of what its various presidents have regarded as the pressing needs of the art in this country and as presenting fields for legitimate organized improvement work, as set forth in their various annual addresses before the Society.

President John Thorpe, in his addresses at the first and second conventions of the S. A. F. called attention to the great need for the diffusion of knowledge among the craft and of the love for flowers among the people generally, the latter to be accomplished through the attainment of the former. He urged the support of the local societies and of public floral exhibitions and the giving of more general attention to the science and practice of plant breeding; he advocated the establishment of an experimental garden, a mutual benevolent association and of "a well-managed horticultural weekly."

President Robert Craig wanted to see dealers avail themselves of the commercial advantages presented in the opportunity to participate in the Trade Exhibitions, believed in encouraging the planting of more hardy evergreens and advised the organization of local clubs and support of local exhibitions.

President E. G. Hill recommended the establishment of a training school where young men might obtain scientific and technical knowledge in floriculture. He wanted to see more attention given to the raising of new plant forms of American origin. Like his predecessors he spoke for the encouragement of public exhibitions and the formation

of florists' clubs. He called attention to the need of a better credit system and protection against the dissemination of plants under false or misleading names.

President John N. May urged the value of public exhibitions as educators for all and pleaded for better commercial methods in the flower trade.

President J. M. Jordan believed in the teaching of horticulture in the public schools, the encouragement of bequests and donations for horticultural purposes and recommended co-operation of societies and individuals with the Experiment Station.

President M. H. Norton advocated the establishment of a reliable system of nomenclature, the support of public exhibitions, the organization of local clubs, the development of better taste in artistic floral work, the adherence to a single specialty by flower growers, the higher education of the young men in the trade, the cultivation of more friendly business relations among the craft and the encouragement of young ladies to enter the florist business.

President James Dean advised perseverance in the hybridizing and cross breeding of plants, the encouragement of State Horticultural Societies and kindred associations and co-operative relations between the S. A. F. and auxiliary societies. He dwelt upon the desirability of combining the scientific with the practical education for young florists and suggested that the Experiment Stations should be appealed to to aid the florist in his perplexities, through investigation and research.

President W. R. Smith wanted to have the compost heap removed from the front yard and a little ornamental horticulture introduced in its stead. The surplus flowers should be given to the children and the hospitals. Florists' bulbs should be produced in this country and the lists of varieties of chrysanthemums, carnations, etc., should be largely reduced.

President J. T. Anthony believed America should produce her own roses as she has been doing with chrysanthemums and carnations. The S. A. F. should unite the work of all special societies and compensate a secretary sufficiently to command his whole time. He recommended the establishment of an examining board to grant certificates of proficiency in floriculture.

President Edwin Lonsdale advocated the establishment of botany classes in connection with florists' clubs and societies and the regular study of botany in the public schools, the providing of a literary bureau to furnish reliable news and cultural notes to newspapers and periodicals. He advised greater use of the facilities for soil tests and combatting insects and diseases as afforded by the Government Experiment Stations. He thought that florists should study the requirements of plant life to withstand unfavorable conditions of apartments so as to more intelligently advise buyers.

President Wm. Scott spoke of the higher education essential for the young florists of the future and denounced misrepresentation and the giving of misleading names in the sale of plants. He recommended the establishment of a flower show as a regular adjunct of the S. A. F. conventions.

President Adam Graham urged that the craft make a greater use of the opportunities which organization offers.

President Wm. F. Gude advocated the encouragement of home bulb production, the use of all means for developing a general love for flowers and recommended an annual national flower show.

President W. N. Rudd declared the great need of the times to be "to discourage and stamp out from our profession and practice that which is bad; to commend and retain that which is good; to point out and retain that which is lacking" and advised a system of joint registry for new plants by the S. A. F. and special societies; he also made an appeal for a greater number of varieties in the flower market stock.

President E. M. Wood recommended the establishment of a fund in the S. A. F. for special objects, the encouragement of auxiliary societies but under the auspices of and a charter from the S. A. F. He urged the establishment of a department of co-operative purchase of supplies, and the building of a national home for the S. A. F. second to no other horticultural building in the world. His text throughout was unity and co-operation.

President Patrick O'Mara advised the alliance of the S.

A. F. and the special societies, the support of the movement for a "parcels post," the production of home-grown bulbs, plants and seeds and the sending abroad of someone to study the production there of what we are now importing. He urged the education of employees and spoke of the value of competitions to stimulate ambition, supplemented by access to college experiments and literature thereon.

President John Burton advocated the appointment by the S. A. F. of committees on the Peony, the Iris and the Phloxes as the most simple, flexible and natural of the various plans put forth in the interests of "closer relations" between the S. A. F. and other societies. He urged the desirability of horticultural education for children, the support of floral exhibitions, the home production of florists' bulbs and the revival of the Nomenclature Committee by the S. A. F. and uttered a caution against the danger of too rapid expansion and development of business enterprises under existing conditions.

President Phil. Breitmeyer repeated the warning against overproduction and called attention to recent labor problems, advocating the adoption of a more nearly uniform scale of compensation for the florists' employees. He urged recognition and encouragement for the amateur horticultural societies by the trade, the more general use of flowering plants in public parks, a wider use of the Experiment Station facilities and the establishment of an arbitration committee by the S. A. F.

President J. C. Vaughan recommended a greater interest in Civic Improvements within the scope of which horticultural products come. He voiced the value of a press bureau, urged the support of public exhibitions, the teaching of horticulture in the public schools, the sending of club delegates to S. A. F. meetings and that the Society should be backed up by the trade in an effort to secure uniform inspection laws, equitable freight classifications, and fair legislation. He favored tariff reduction, parcels post and larger state appropriations for experimental work in floriculture.

President W. F. Kasting made a strong plea for greater diligence on the part of the florist trade in beautifying their own premises as an example for the public to follow. He urged the desirability of more effort to interest and instruct the public in horticultural exhibitions, favored national flower shows, a more general use of the Experiment Stations, parcels post, better business methods, the support of the trade press and the abolition of the congressional free seed system.

President Wm. J. Stewart urged the need of more thoroughly equipped horticulturists, a better system in all departments of study, self-education in artistic taste, the support of the societies, a sentiment in favor of forest protection, the encouragement of school gardening, education of the public by florists' example, affiliation and intelligent co-operation between the various societies, a more comprehensive system of plant registration, parcels post and the stimulation of the production of home-grown material.

President F. H. Traendly spoke against the use of painted or wax flowers and galax leaves and urged the advancement of the sale of greenhouse products, supported the work of the "Council of Horticulture," advocated parcels post and horticultural education in the public schools and advised the turning over of the work of plant registration to the Bureau of Plant Industry at Washington.

Each one of the gentlemen whose views are above quoted was naturally influenced in his address by local and timely considerations and some were called upon to face crises in the Society which demanded careful thought and wise counsel on problems more directly concerning the internal affairs of the organization than the broader interests of the horticultural industries and such we have passed over as irrelevant here. Broadly considered, the sum and substance of the recommendations to which we now call attention is that those engaged in horticultural industry should take full advantage of every means for advancement individually and collectively and then, through a proper use of this intelligence, uplift the public to a higher knowledge of horticulture and a better appreciation of horticultural art. The organiza-

tion of local florists' clubs and societies, the support of exhibitions—trade or public—the supervision of horticultural information as disseminated through the public press, the acquirement of fundamental knowledge on the part of employes whose duties bring them into contact with the people, the condemnation of everything savoring of pretence or misrepresentation in trade dealings, are all means tending to the end so much to be desired. To facilitate progress towards this laudable purpose the active co-operation and aid of the Experiment Stations in horticultural work should be enlisted and that adequate importance and strength may attach to all movements for such recognition, practical affiliation and cohesion between all our local and national organizations is an essential which no one will question. These instrumentalities for the betterment of American horticulture and of those who make it their avocation have lost nothing of their importance with the lapse of time but are of as vital consequence now as when advocated by the earnest men whom the national society has chosen as its standard bearers from year to year. They all lead in the direction of progress and are founded on those principles which must be accepted and followed if American horticulture is to attain and hold its rightful position. They furnish unlimited material and inspiration for conventions without number and are an unfailing guide for the activities of clubs and societies wherever located and however constituted. They embody the concrete wisdom and aspiration of the craft as kindled and evolved under the kindly nurture for a quarter century of The Grand Old Society.

Privileges curtailed

Those who are disposed to accept without qualification the off-hand statement made by the railroad representatives, as quoted in the S. A. F. preliminary program, to the effect that under present arrangements S. A. F. members can attend the convention as cheaply as formerly, may perhaps find subject for thought in the fact that the ROUND TRIP rates to the first Cincinnati convention as quoted from several points were as follows:

From St. Louis	\$13.30
From New York.....	16.00
From Philadelphia	14.00
From Chicago	9.00

With all our alleged advancement in transportation facilities and the freely predicted benefits in which the public were to share as a result of the abolition of free passes we are confronted with the fact that from some of the most important centers we are now called upon to pay almost double the fare for which the railroads were willing to carry us to the convention twenty-four years ago. We are aware that all protests are unavailing and have no doubt that everything that could be done has been done to secure better terms. Our main object in these lines is to impress upon our readers the truth as to the situation and to warn them not to be too ready to take on trust either the acts or assertions of the railroad people in their present frame of mind towards the public.

Where the retailer should get busy

The prohibition placed by school committees and others in authority upon the public presentation of flowers to graduating pupils of schools and seminaries is, we understand, to be brought before the Society of American Florists for consideration, by florists who find their business suffering from this alleged oppressive proscription. Just what the S. A. F. will be asked to do in the matter is not in evidence yet, but it is greatly to be desired that the controversy

be handled in a discreet and carefully considered manner so that it be made plain that dictates other than those that are purely mercenary are behind our activity. There is another subject which might with wisdom be slated for attention at Cincinnati. We refer to that standing reproach to the retail flower trade in many places—the practice of soliciting orders for floral designs at homes where death has entered. If some practical plan of dealing with the evil could be evolved it would conduce to the honor of the entire florist trade, for, while the respectable portion of the retail store trade is the principal sufferer, in dignity and in pocket, yet it is plain that so long as no general protest is made those engaged in other departments of floral industry must bear, in the public estimation, a share of the disrepute attached to the custom which has of late years been rapidly spreading among a certain class of so-called florists. Growers and wholesalers having regard for the fair name of their business should be found ready to join with the decorous element in the retail trade in deprecation of the abuse and in giving wide publicity to their sentiments regarding it. Apart from the phase of the question which we have here touched upon it will be well to consider whether the florists' business as a whole, including those industries more or less dependent upon it, is not materially out of pocket through the disfavor for other uses which florists' flowers must suffer through their frequent association with such vulgar practices.

Horticulture at the Convention

HORTICULTURE's office will be located on the first floor of the exhibition, to the left of and close to the front door. A good supply of this special issue of the paper will be on hand for free distribution and we shall be glad to have our friends call and exchange greetings. Some one will be in attendance during regular business hours to receive subscriptions and advertisements or attend to any other business connected with the publication. Give us a call.

We call the attention of our readers, with no little pride and satisfaction, to the splendid array of trade advertising which appears in this issue of HORTICULTURE—a much larger issue than we have ever before published and one which would not have been within our power had the advertising trade not responded so cordially to our announcement. We hope that the purchasing trade will not neglect the opportunity thus presented to acquaint themselves with what is in the market in the way of desirable material for the busy season which is now close at hand and will favor in every way possible the enterprising dealers who have chosen to talk to the buying trade through the columns of HORTICULTURE.

Our next issue will contain a full account of the proceedings at the 25th convention of the Society of American Florists and Ornamental Horticulturists at Cincinnati, Ohio, the exhibits and awards and other interesting news so far as completed up to the time of going to press. By the thousands of interested horticulturists not in attendance at the convention this will be perused with attention and the paper will be an especially good medium for advertisers because of this fact. If you have anything to sell you can feel assured that whatever you may offer in that issue will enjoy a widespread and remunerative publicity. Send copy in now while reminded of it and we will do the rest.

THE
SOCIETY

OF

AMERICAN FLORISTS

—What we have long needed.—

THE Florists of the United States have for a long time felt the necessity of an organization, national in character, honest and progressive in purpose. Such an organization is now an accomplished fact.

Who are Interested?—The 15,000 people directly and indirectly engaged in the business, are certainly interested in a Society that will study and further their general good, the amateur, lady or gentleman, the lover of flowers in town or country, the gentleman's gardener, will all be interested in our Society, as the whole range of horticulture will be reviewed from year to year, and gardening in all its phases will be discussed in a manner that can not fail to profit all.

Who will be Benefited.—Altogether the Florist, with his acres of glass, and his humble brother, with a few hundred feet, the decorative florist and dealer in flowers, the manufacturer and dealer in supplies of all sorts, the greenhouse builder and heating apparatus manufacturer and all those interested in floriculture whether for pleasure or profit.

The Aim of the Society.—is to pick up and carry forward all that tends to advance the growth of such a profitable occupation, to collect and diffuse from the best sources information that will be beneficial to all its members, to care for and instruct in the most judicious manner on a successful business, to help those overtaken by misfortune, to bring a brotherhood worthy of the golden rule.

The Plan of Action.—is to hold a yearly meeting at one of the larger cities, in connection with these there will be an exhibition—at such meetings the business of the Society will be conducted, the transactions of the year previous will be presented, and the program for the ensuing year laid down. The exhibition will be entirely unique, and of such interest it will be worthy of the Society of American Florists. The possibility of forming under a Hall Fund or a Mutual Insurance Company is generally conceded, and it will receive careful thought and prompt action on the part of the Society at its first annual meeting in Cincinnati.

Losses by Fire.—One of the first intentions of the Society of American Florists is to provide in the best manner an insurance against loss of glass by fire. To advise the best plans for this insurance it will be necessary that all information regarding losses by fire during the years '82, '83 and '84 be furnished the Secretary as soon as possible. We wish to investigate this thoroughly and ask our friends to report any losses and to state the NAME of the sufferer, DATE of occurrence, quantity and PER CENT. of glass broken. This is a matter of vital importance to the Society and a compliance with the above is urgently requested that the Society may have facts and data as a basis for action.

Who are Eligible.—"All Florists, Gardeners, Seedsmen, Nurserymen, Superintendents of Parks, Manufacturers of Heating Apparatus, Greenhouse Builders and dealers in Florists' Supplies in the United States and Canada shall be eligible to membership in this Society."

The fact that the large membership here given of representative men of the trade is voluntary and received almost without effort, proves that with the extended circulation kindly given our announcement through the various trade journals and catalogues we shall procure for our next membership list, the name of nearly every man connected with our business. Your name should be sent to the Secretary, or to the Vice-President of your State, or other officer of the Society and the regular numbered receipt of the Treasurer will be sent. **LET US HEAR FROM YOU.**

Annual Subscription.—The annual subscription is \$2.00, entitling members to all the privileges of the Society. Most of our members so far, wishing to give the Society a good impetus in the shape of an incidental fund, have paid \$3.00 extra, making a subscription of \$5.00. We shall be glad of many other \$5.00 subscribers.

For all particulars address:

E. G. HILL, Sec'y,
Richmond, Ind.

LIST OF MEMBERS SUBSCRIBING \$6.00.

W. G. Newitt, -	Chicago, Ill.	Frank Huston, -	Chicago, Ill.
Herman H. Ritter, -	Dayton, Ohio.	R. W. Coglan, -	Niles Centre, Ill.

A. Whitcomb, -	Lawrence, Kan.	Robert Craig, -	Philadelphia, Pa.
John Thorpe, -	Queens, N. Y.	Edwin Lonsdale, -	Philadelphia, Pa.
Robert George, -	Painesville, O.	H. A. Dreer, -	Philadelphia, Pa.

Practical Papers. short, concise and full of instruction will be read at the meetings, and printed with the reports of the Society each year. The papers will be read at the meetings, and printed with the reports of the Society each year. The papers will be read at the meetings, and printed with the reports of the Society each year.

Action Taken.—At a meeting of the representatives from every part of the State held in Cincinnati, Ohio, 1884, the Society was organized by the following:

OFFICERS.

JOHN THORPE, President, -	Queens, N. Y.
J. M. JORDAN, First Vice-President, -	St. Louis, Mo.
M. A. HUNT, Treasurer, -	Wright's Grove, Chicago.
F. G. HILL, Secretary, -	Richmond, Ind.

EXECUTIVE COMMITTEE.

ROBT. S. BROWN, -	Kansas City, Mo.	ROBT. CRAIG, -	Philadelphia, Pa.
J. C. VAUGHAN, -	Chicago, Ill.	ALFRED NEUNER, -	Louisville, Ky.
ROBT. J. HALLIDAY, -	Baltimore, Md.	ROBT. GEORGE, -	Painesville, O.
B. P. CRITCHELL, -	Cincinnati, O.	W. G. NEWETT, -	Chicago, Ill.
HARRY SUNDERBRUCH, -	Cincinnati, O.		

VICE-PRESIDENTS.

ROBT. H. HEATH, -	Canada West.	EDWIN LONSDALE, -	Pennsylvania.
C. E. ALLEN, -	Vermont.	ALEX. MURDOCH, -	Pennsylvania.
LUTHER ARMSTRONG, -	Massachusetts.	F. R. PIERSON, -	New York.
A. BRACKENRIDGE, -	Maryland.	R. MAITRE, -	Louisiana.
WALTER COLES, -	Delaware.	A. H. BUNDE, -	Minnesota.
J. D. CARMODY, -	Indiana.	GEO. P. LAMB, -	North Carolina.
A. DONAGHUE, -	Nebraska.	CARL JURGENS, -	Rhode Island.
PETER HENDERSON, -	New Jersey.	W. R. SMITH, -	District Columbia.
FRANCIS MORAT, -	Kentucky.	C. B. WHITNALL, -	Wisconsin.
C. A. REESER, -	Ohio.	O. F. DUE, -	Salt Lake City, Utah.
MARCUS ELLIS, -	New Hampshire.	J. C. VAUGHAN, -	Illinois.

Our First Meeting.—The first meeting will be held at Cincinnati, O., between the 12th and 25th of August, 1885. We can promise even at this early date a more numerous attendance than has ever been accorded to any similar organization.

Our plans are maturing for an exhibition, noble in its conception and differing in character from any before attempted. The interest already manifested by many of the members warrants the positive statement. A schedule of premiums with rules and regulations and a complete list of members to date will be ready early in January.

E. G. Hill, -	Richmond, Ind.	David Clark, -	Brdwy N. Y. City

SOCIETY OF AMERICAN FLORISTS AND ORNAMENTAL HORTICULTURISTS

THE BADGE OF
1885

Twenty-Fifth Annual Convention at Cincinnati, Ohio, August 17-20, 1909.

THE BADGE OF
1909

Officers For 1909.

PRESIDENT—J. A. Valentine, 1706 Broadway, Denver, Colo.

VICE-PRESIDENT—E. G. Gillett, 131 E. 3rd St., Cincinnati, Ohio.

SECRETARY—W. N. Rudd, Morgan Park, Ill.

TREASURER—H. B. Beatty, Farmers' Bank Bldg., Pittsburg, Pa.

Executive Board.

For One Year: Samuel Murray, J. K. M. L. Farquhar.

For Two Years: George Asmus, John Young.

For Three Years: W. J. Vesey, Eugene Dailedouze.

Ex-Officio: F. H. Traendly.

State Vice-Presidents.

Alabama — J. L. Parker, Birmingham.

California — Samuel Lundy, 1176 Washington St., Oakland.

Colorado — N. A. Benson, Denver.

Connecticut — Frank S. Platt, 376 State St., New Haven.

District of Columbia—Wm. H. Ernest, Washington.

Florida — E. N. Reasoner, Oneco.

Georgia — A. C. Oelschig, Savannah.

Illinois (North)—H. N. Bruns, 1409 W. Madison St., Chicago.

Illinois (South)—H. B. Dorner, Urbana.

Indiana—I. C. Bertermann, Indianapolis.

Iowa — Roy F. Wilcox, Council Bluffs.

Louisiana — Chas. Eble, 106 Baronne St., New Orleans.

Maine—Wm. Miller, Bar Harbor.

Maryland—R. A. Vincent, White Marsh.

Massachusetts (East)—F. E. Palmer, Brookline.

Massachusetts (West)—A. J. Lovell, Lenox.

Michigan (East)—A. Pochelon, Detroit.

Michigan (West)—H. Smith, Grand Rapids.

Minnesota—S. D. Dysinger, 20 W. 5th St., St. Paul.

Mississippi—S. W. Crowell, Rich.

Missouri (East)—F. H. Meinhardt, 7041 Florissant Av., St. Louis.

Missouri (West)—W. L. Rock, 1116 Walnut St., Kansas City.

Nebraska—Lewis Henderson, 1519 Farnum St., Omaha.

New Hampshire—H. C. Stache, Manchester.

New Jersey—Geo. A. Stroblein, Riverton.

New York (East)—H. A. Bunyard, 342 W. 14th St., New York.

New York (West)—Wm. L. Keller, Rochester.

North Carolina—W. Rehder, Wilmington.

Ohio (North)—E. B. George, Painesville.

Ohio (South)—C. E. Critchell, 36 E. 3rd St., Cincinnati.

Oklahoma—Geo. Stiles, 139 W. Main St., Oklahoma City.

Pennsylvania (West)—T. P. Langhans, 504 Liberty St., Pittsburg.

Pennsylvania (East)—E. A. Stroud, Philadelphia.

Rhode Island — Peter S. Byrnes, Wickford.

South Carolina — C. A. Moss, Spartanburg.

Tennessee — M. Stauch, Nashville.

Virginia — H. Brown, 5 W. Broad St., Richmond.

Wisconsin (East)—N. Zweifel, 14th and Groeling Av., Milwaukee.

Wisconsin (West)—C. E. Schaefer, La Crosse.

Botanist — Prof. John F. Cowell, Botanic Garden, Buffalo, N. Y.

Pathologist — Dr. B. M. Duggar, Ithaca, N. Y.

Entomologist—Dr. S. A. Forbes, Urbana, Ill.

Washington Representative of the Society—William F. Gude, Washington.

Superintendent of Exhibition—William F. Murphy, 311 Main St., Cincinnati, O.

Tariff and Legislative Committee.

Ben. F. Hammond, Fishkill, N. Y.

J. A. VALENTINE, PRESIDENT.

H. B. BEATTY
Treasurer

W. N. RUDD
Secretary

E. G. GILLETT
Vice-President

EUGENE DAILLEDOUZE
Director

SAMUEL MURRAY
Director

W. J. VESEY
Director

GEO. ASMUS
Director

J. K. M. L. FARQUHAR
Director

JOHN YOUNG
Director

Chairman; F. R. Pierson, Tarrytown, N. Y.; J. D. Eisele, Riverton, N. J.; Patrick Welch, Boston, Mass.; Patrick O'Mara, Jersey City, N. J.; E. A. Moseley, Washington, D. C.

Committee on Convention Sports.

E. F. Winterson, 45 Wabash Ave., Chicago, Chairman; C. E. Critchell; E. G. Gillett.

Advisory Committee for Trade Exhibition.

Albert McCullough, Cincinnati, Chairman; R. Witterstaetter; E. G. Gillett.

Committee on School Gardens.

E. V. Hallock, Queens, N. Y., Chairman; Patrick O'Mara, Jersey City, N. J.; F. R. Pierson, Tarrytown, N. Y.; Ben. Hammond, Fishkill, N. Y.; F. E. Palmer, Brookline, Mass.; J. F. Cowell, Buffalo, N. Y.

Committee on National Flower Show.

F. R. Pierson, Tarrytown, N. Y., Chairman; F. H. Traendly, New York, N. Y.; W. J. Stewart, Boston, Mass.; Robert Craig, Philadelphia, Pa.; J. K.

"Second Empire Express" at 12.40 p. m., Monday, August 16. Boston party will leave at 10 a. m., Monday, connecting with the New York train at Albany at 3.57 p. m. Parties from various cities en route will also join the New York contingent. Address: John Young, Secretary, 51 W. 28th St., for full particulars.

Chicago.

As recorded elsewhere in this paper, the Chicago delegation and all others desirous of joining them will leave Chicago at 2.30 p. m., August 16, via Monon R. R. (C. H. & D.) by special train. The party from Denver, including President Valentine, will accompany the Chicagoans. Address: P. J. Foley, 26th St. and Western Ave., Chairman of Transportation Committee, for full particulars.

Philadelphia.

The Philadelphia party will travel by the Pennsylvania Railroad, leaving Broad Street station at 12.31, noon, Monday, August 16. Due Cincinnati,

per day and up. European plan \$1.00 and up.

St. Nicholas, European plan, \$1.50 per day and up.

Palace Hotel, European plan, \$1.00 and up; American, \$2.00 to \$3.50.

The Emery, Honing, Lackman, and Gerdes are \$1.00 a day and upwards; the Rand and the Stag are 75 cents and upwards and the Bristol and Hotel Thoma, 50 cents and upwards, all on the European plan. The Munro is \$1.25 and upwards, European plan, and the Alms \$3.00 on the American plan.

Burnet House, American plan, \$2.50

E. F. WINTERSON
Chairman Sports Committee

President Valentine hopes to meet as many as can attend and wishes it distinctly understood that formal dress is not expected, but that the most comfortable costume will be the most appropriate.

Wednesday, August 18, 1909. Second Day—Morning Session.

9.00 A. M. Organ Concert.

9.30 A. M. Illustrated Lecture, "The Value of the Recent Work in Heredity to the Practical Flower Breeder." By Jesse B. Norton, Washington, D. C.; Discussion; Question Box.

11.00 A. M. Selection of Next Meeting Place. Polls Open One Hour; Nomination of Officers for 1910; Reports of Judges of Trade Exhibits; Annual Meeting of Ladies' Society of American Florists.

Second Day—Afternoon Session.

2.00 P. M. Organ Concert.

2.30 P. M. "The National Flower Show—Past and Prospective" and Special Matters.

Second Day—Evening Session.

8.00 P. M. Illustrated Lecture—Color Photography. J. Horace McFarland, Harrisburg, Pa.

Thursday, August 19, 1909. Third Day Morning Session.

9.00 A. M. Organ Concert.

9.30 A. M. Address—"Some Work of the U. S. Department of Agriculture as Affecting Floriculture." By B. T. Galloway, Washington, D. C.; Discussion.

10.30 A. M. Election of Officers. Polls will remain open two hours.

Amendment to By-Laws.

The following amendment having been submitted to the Executive Board and accepted by them, will be voted upon at this time:

Amending Article 4, Section 2, as amended previously at Niagara Falls in 1908, by striking out the figures \$25.00 in said article as above amended, and inserting in place thereof the figures \$50.00, meaning and intending to advance the fee for Life Membership

WILLIAM MURPHY
Supt. Trade Exhibition

from \$25.00 as now obtaining to \$50.00. The Question Box.

Third Day—Afternoon—No Session—Bowling Contest and Other Sports.

2.00 P. M. Meeting of the American Carnation Society.

2.45 P. M. Meeting of the American Rose Society.

3.30 P. M. Meeting of the National Sweet Pea Society.

4.30 P. M. Meeting of the Florists' Hail Association.

Third Day—Evening Session.

7.30 P. M. Organ Concert.

8.00 P. M. Paper—"The First Meeting of the Society." By the First Secretary, E. G. Hill; Address—"What the Society has Accomplished in Twenty-five Years." By J. C. Vaughan; Addresses by Past Presidents.

Friday, August 20, 1909.

On Friday the convention visitors will be the guests of the Cincinnati Florists' Society, on a boat ride on the "Island Queen," a five-deck steamer, which has been chartered to take the

convention to Coney Island, on the Ohio River, where an old-fashioned Kentucky barbecue is on the program.

MR. RUDD'S VIEWS APPROVED.
Editor HORTICULTURE:—

I should like to be placed on record as most sincerely and emphatically endorsing the sentiment and much of the substance of Mr. Rudd's statement concerning the secretaryship of the S. A. F. and O. H., published in the last issue of the various trade papers.

I also desire to express my appreciation of Mr. Rudd's high sense of public duty, and sincerely hope that all members who may be present at the coming convention may be imbued with an equally high sense of that duty, and when the time comes for making a choice of the men for the various offices, all will sink personal and selfish desires and consider the welfare of the society only.

Does not Mr. Rudd's statement, "the right man can do \$1500.00 worth of work and then feel dissatisfied with himself that he has been unable to take up many things that would un-

BENJ. HAMMOND
Chairman Tariff and Legislative Committee

doubtedly in the future advance the Society's interest and increase its membership," raise a question as to the wisdom of the Society paying \$1000.00 only? If, as Mr. Rudd states, "no man engaged in active business, either as proprietor or employee, can take up this work and carry it out so that the Society may achieve the success which is within its grasp, unless he grossly neglects his own business" the only logical inference is that a man must give practically his entire time to the work. How can a man with the required energy, intelligence and ability afford to give his entire time to the work for the sum paid? I think that this is a phase of the subject that the Society will do well to consider. I. L. POWELL.

LADIES' SOCIETY OF AMERICAN FLORISTS.

The Ladies' S. A. F. will give a reception Wednesday evening, Aug. 18, from 9.30 to 11.30, at the Sinton Hotel. Refreshments will be served.

MRS. J. C. VAUGHAN, Pres.

MRS. CHAS. H. MAYNARD, Sec.

ROCHESTER'S AMBITION.

Rochester, N. Y. is out after the 1910 Convention of the Society of American Florists and Ornamental Horticulturists. Buttons bearing the legend "I will meet you in Rochester the 'Flower City' in 1910," are being distributed and a live delegation from Rochester promises to be on the ground during the Cincinnati Convention as a clincher. Rochester has a combined convention and exhibition hall approximating 48,000 square feet of floor space. Of this space 14,000 feet is for the general assembly and 34,000 feet for such display of wares as delegates to conventions may deem fit to make. In the circulars sent out by the Rochester Chamber of Commerce these immense halls are offered free to all visiting conventions, heat and light included.

CHICAGO FLORISTS' CLUB.

The meeting of the Chicago Florists' Club on Thursday, August 5, was mainly for the perfecting of plans for the Cincinnati Convention. A committee

F. R. PIERSON
Tariff and Legislative Committee

of twelve, with Ed. Winterson as chairman, was appointed to arrange for decorating the special car and there will be no question as to its destination or what business the occupants represent when it leaves here August 16 at 2.30 p. m., from the Polk Street station. The smaller cities and towns will hear the salute of a calliope and will see a train bearing many banners with strange devices. The interior will be profusely decorated with flowers and the hours will be enlivened with a German band whose entertainment will leave no time for thoughts to stray back to the business left behind. (See announcement under "During Recess.") The Denver delegation are expected at 7 a. m., and will be entertained at breakfast by the Chicago club. Trips to various parts of the city will be made with those visitors who are so inclined.

Among the Washingtonians who will attend the convention are Theo. Dietrich, Geo. Shaffer and wife, Wm. F. Gude, wife and party, Robert McClellan, Wm. H. Ernest and Geo. Cooke.

CINCINNATI

Cincinnati is a noble city with a fame that is world-wide and a record of which her people are justly proud. To us, for present purposes, however, that event in her history which gives her especial distinction is the fact that the first S. A. F. Convention and the

made a record for efficiency and comradeship which after the lapse of so many years still stands undimmed in the memory of everyone now living who had the honor of being present on that occasion.

But few of the men who were active in the detail work of that first convention are now on the scene, but the same spirit that animated them still pervades the busy floral community of which Cincinnati is the Hub, and the visitors will meet with the same hearty welcome that the pioneers were given on that memorable occasion when the banner of the S. A. F. first waved. The same big commodious building which received us then will receive us now, and no doubt those of us who were in attendance at that first event will find much still remaining to remind us fondly of scenes and incidents connected with that auspicious occasion. It is our pleasure to present herewith a few views of notable spots in Cincinnati, our only regret being that we have not room for many more, equally attractive and significant of the growth and affluence of the Convention City. We also present the portraits of some of the men who, in association with the official representatives of the Society of American Florists and Ornamental Horticulturists, have been working hard to make this "Silver Jubilee" a success and who will be found still "on the job" when the visitors get there. They represent the best blood of the pro-

fession in their territory—the men who are awake to the welfare of their business in its broader aspects and not reluctant to contribute liberally of their own time, effort and means that their fellows may be happy and their business interests benefited in common. From what we already know in ad-

J. A. PETERSON

SOUTHAMPTON HORTICULTURAL SOCIETY.

The third annual exhibition of the Southampton Horticultural Society was held in a large tent on the fine grounds of the Art Museum, Southampton, N. Y., Wednesday and Thursday, July 28th and 29th. All conditions were fine; the weather could not have been better, and in spite of the cold wet late spring the exhibit of flowers and vegetables far exceeded all expectations—annuals being at their height. The tables of cut-flowers arranged for display attracted much attention, as many were unaware that such a vast variety of annuals were produced in Southampton. Though a little early for dahlias and gladioli every class was filled and the flowers were the pink of perfection. Plants raised under glass were present in large numbers, all spick and span for exhibition effect. The tables allotted for vegetable display were filled with the bright smooth, tempting products such as are only produced to such perfection in the sandy loam of Long Island.

One of the leading features was the arrangement of lunch and dinner tables with their artistic floral display. The cottage element take an active interest in these lunch tables as also in the baskets arranged for effect, being the exhibition of the ladies' own handiwork, while the dinner table class, which was open for both days, was entered into by anyone who so desired. The competition was strong, the displays beautiful, and the interest intense.

The judges of the general exhibits were John Wallace of Sag Harbor, Charles Dumper of Bay Shore, and Louis Vetault of Easthampton. The judges of the lunch and dinner tables and baskets were chosen from among the ladies of the cottage contingent. A vase competition on the grounds of the Art Museum had ten entries in two classes comprehending large and small vases, the judges of which were Messrs. Wm. F. Halsey, Benj. C. Palmer and Walter L. Jagger.

The lunch tables which were exhibited only on the first day received awards as follows: 1st prize—Mrs. H. K. Porter, antique table set with pewterware and Italian glasses, decorated with dark dahlias and grapes; 2nd—Mrs. Grange Lord, mahogany table, light green china, sweet peas and green foliage; 3rd—Miss Edith Newbold, mahogany table, blue and white china, deep blue Centaurea cyanus and light green grapes.

In the dinner table class, on the first day the first prize was awarded to Mrs. B. Aymer Sands, pink and yellow Phlox Drummondii, Aralia pentaphylla foliage, silver candlesticks and pink shades; 2nd—Mrs. Horace Russell, double pink hollyhocks and pink roses, glass candlesticks with white and silver shades; 3rd—Mrs. C. Van R. Robb, Dark red and white Phlox Drummondii, silver candlesticks and white shades.

On the second day, 1st prize went to Mrs. Horace Russell, pink sweet peas and Asparagus Sprengeri, glass candlesticks, pink and silver shades; 2nd—Mrs. R. M. Thompson, Rudbeckia Golden Glow; 3rd—Mrs. P. B. Wyckoff, yellow Antirrhinum, glass candlesticks, daisy shades.

In the Vase competition, large size,

the prizes were awarded as follows: 1st, Julius W. King; 2nd, Owen G. Owen; 3rd, H. W. Clark. Small size—1st, Martin McLaughlin; 2nd, U. G. Agar; 3rd, Thos. Smith.

A silver medal contributed by W. W. Rawson & Co. to be awarded to the exhibitor receiving highest number of points went to Frank H. Smith, gardener to the Meadow Club. The prize for the most meritorious exhibit was captured by a fine specimen cycas, entered by U. G. Agar, gardener to Mr. Wm. Manice.

The displays of dahlias were awarded as follows: 1st, to Mr. Edward H. Wales, gardener Julius W. King; 2nd, Mr. B. Aymer Sands, gardener Benj. C. Palmer; each of whom entered in many other classes. King getting second in a fine display of gloxinias and Palmer first in a display of antirrhinum, also both getting first and second in other displays of dahlias according to their class. Mrs. R. M. Thompson, gardener Owen G. Owen, took first in the gloxinia exhibit and perennial flowers, 12 varieties.

The following gardens were the leading contributors to the exhibit: Mr. J. L. Breese, gardener H. W. Clark, received first on fibrous begonia, Nephrolepis, table foliage plants and specimen bay tree; Mr. Edward H. Wales, gardener Julius W. King, first on display of annuals Phlox Drummondii, geraniums, and Celosia plumosa; Mrs. E. W. Humphreys, gardener Martin McLaughlin, specimen hydrangea, pair of conifers; Mrs. R. M. Thompson, first on salvia, mignonne, browallia in pots, and perennial cut-flowers; Mrs. P. B. Wyckoff, gardener John M. Renne, first on Hydrangea hortensis and tuberous begonia; B. Aymer Sands, first on antirrhinums, gladioli, stocks, scabiosa, and centaurea; Wm. Manice, first on roses, dianthus, carnations, pompon dahlias, tuberous begonias, cycas, dracenas, Begonia Rex, Adiantum Farleyense, palms, ferns, ficus and foliage plants; The Meadow Club, gardener Frank H. Smith, first on pansies, asters, sweet peas, dahlias, Iris Kaempferi, phloxes and a variety of garden annuals.

A very interesting and attractive exhibit of aquatics, nelumbiums in pink, white and yellow, nymphaeas in blue, yellow, red, pink, white and other shades, with other water plants were shown, in charge of John S. Hay from the Henry A. Dreer establishment of Philadelphia. Mr. Hendrickson, from the J. L. Childs' Nursery, was also present with a fine display of gladioli and yellow callas.

Many other entries and prizes were made and taken by the above gardeners, as also by many others who made but a few entries, the whole contributing to form in the flower and vegetable exhibit one of the most attractive features of the place this season. A most valuable aid and enthusiastic member of the advisory committee was Mr. Samuel L. Parrish, one of the cottage colony and the owner of the beautiful grounds on which the show has been held for two seasons.

B. C. PALMER, Secretary.

The Rochester, N. Y., florists are planning for a picnic about the end of this month, but the hot weather prevents anybody getting unduly excited about it.

Seed Trade

Crop Failures Sometimes a Blessing.

There is little to chronicle at this time of year, for while crops are steadily progressing towards maturity, seedsmen as a rule are off on their vacation, strengthening body and mind for the struggle of the next ten or eleven months. Short crop years are usually harbingers of the season to follow for most of the seedsmen, and while they are a temporary disappointment to the grower, they are best for him in the long run. Of course crop failures, or largely such, are not considered in this connection, for when goods reach famine prices or disappear from the market it is not profitable for either grower or dealer, but a moderate shortage of staple goods greatly strengthens prices, and increases demand, with the result that stocks are well cleaned up at the end of the season, and the growers' orders for the ensuing year are much larger than when the dealer carries over any considerable surpluses. This generally insures fresh stocks, which inures to the benefit of the planter and seedsmen. As a rule when the grower delivers 100 per cent, he has a surplus left, which he foolishly peddles out at prices more or less below his contracting figures, the result being that he has to accept lower prices the coming year and gets smaller orders. This feature of the seed business has been commented on in previous issues of HORTICULTURE, for it is almost the keystone in the arch of success, and will bear off repeating. No one factor is more demoralizing than large surpluses in the hands of either growers or dealers.

Avoid Surpluses.

The practice of many growers, of planting for a surplus on speculation, hoping to have something to sell in case of a shortage in the commodities they produce, has generally proven an illusion and has well-nigh wrecked more than one. A surplus *per se*, may not prove an evil if it is not thrown on the market at reduced prices, but not one grower in a hundred will so treat it, and herein lies the source of trouble. It is gratifying to note, barring one or two notorious plungers, that this evil is not nearly as prevalent as it was a few years ago, whatever the causes may be, which will not be discussed at this time, and it is hoped that the lessons which many growers have had, will be lasting. Avoid surpluses, and you generally escape stagnant or falling markets. It is realized, of course, that an occasional surplus is unavoidable, but unless deliberately planned it is seldom formidable, and usually absorbed the ensuing year.

The Vegetable Crop.

Reports indicate a light potato crop, and strong prices the coming winter and spring. Apples will be a light crop with resulting high prices. Tomatoes will not be a large crop the country over, and the last rain came just in time to save them, as the vines in many sections were dying for lack of moisture. Almost all vegetable crops are unsatisfactory, and unless consumption is greatly curtailed, prices should rule

WHITE CRYSTAL WAX: **EARLIEST OF ALL** White Bermuda: White and Red.

FEDERICO C. VARELA
TENERIFFE (CANARY ISLANDS) EXPERT ONION SEED GROWER AND EXPORTER

fairly high. One of the important vegetable crops, cabbage, has suffered greatly from drought, and as an indication of the trend of prices, it may be stated that kraut manufacturers have refused to book any more orders for this year's crop, excepting at advances of 50 to 100 per cent over their prices of last spring, and are not at all eager at that.

The pea pack is practically finished, and the result is about as estimated in recent issues of HORTICULTURE—namely, 60 to 65 per cent on the acreage, which is slightly below that of last year. While a few packers are greatly disappointed, most of them accept the situation philosophically, knowing that the short crop will prove the salvation of the industry, and probably raise it out of its present depression.

The Cannery's Interests.

While the next Cannery's Convention is yet many moons distant, it may be interesting to repeat that it has been officially decided to hold it at Atlantic City, The Rudolph being again headquarters. Secy. Gonell of the National Association has recently been there arranging about rates and such other concessions as he can secure, and the result will soon be made public. Let it be remembered that unless the Machinery and Supplies Association completely reverses itself, there will be no exhibits. Considerable pressure is being placed on the officers in an effort to bring about this result, but as the "no exhibit" plan was adopted by an overwhelming majority of the association, the officers are not likely to negative this decision unless requested to do so by an equally large majority. Most officers understand that they are the servants of their associations and not their rulers. A few prompted by selfish and ambitious motives, endeavor to use their associations to promote their personal interests, or a few, forming a little oligarchy, seek the control for their own ends. But disruption is the inevitable end of every such organization, unless it frees itself and overthrows the little selfish clique seeking to control it. This fate has overtaken some cannery's organizations.

Crop Conditions.

Some recent advices indicate that the sugar corn crop in the west is not holding the promising condition it exhibited in June and early July, and while there is probably no cause for great anxiety, it is worth noting. No material changes are reported in condition of other seed crops.

Harvesting of peas has commenced,

Extra Earlies and Alaska being ready for the reapers, and we should soon get some information as to yield. Let us hope for a dry harvest, as we can't afford to lose any of an already short crop. A fine rain now before pea harvesting becomes general would not damage peas to any extent, and would do beans immense good.

Notes.

Randolph, Wis.—L. C. Jung has been admitted to partnership with his brother and the firm name will be J. W. Jung Seed Co.

The T. Lee Adams Seed Co. of Kansas City, Mo., was incorporated with capital stock of \$15,000, and not \$10,000 as stated by us last week.

Routzahn Seed Co. of Arroyo Grande, Cal., who have 350 acres devoted to sweet peas and flower seeds, report crop conditions as they enter into harvest as unusually good, particularly on sweet peas.

GIANT PANSY SEED

From Seven of the most careful growers of Europe and Prize Winners of the World on Colors, Substance, Form, Size, Length of Stems and every shade and tint.

Mixture, extra fine, of heavy texture, **Giant Five Blotched** and the **Hybrid Giant**. The proportion of light and dark is well blended for Commercial or for Private purpose.

BUSINESS CHANGES.

Claverack, N. Y.—Peter W. Ham has moved his violet house here from Hudson.

Peterboro, Ont.—Frank Mason is offering his greenhouses for sale, and will start in business in Vancouver, B. C.

Amsterdam, N. Y.—J. C. Hatcher has bought the equipment of the Starin greenhouses at Fultonville and will move them to his place here.

Grand Rapids, Mich.—Peter Kunst has retired from business and leased his place to his sons, who will adopt the name of the Crescent Avenue Floral Co.

Newport, R. I.—Social entertainments here are now keeping florists very busy. The largest function of this kind this season was a dinner dance given by Pembroke Jones at his Bellevue avenue house, August 7. The floral decorations were most elaborate and included the use of about five thousand pink hydrangea blooms, which were very tastefully arranged by Oscar Schultz, the florist.

CHICAGO NOTES.

News of the Week.

The picnic of the Florists' Club is reported as being a success financially to the extent of \$60.

Phil. Foley, chairman of the transportation committee, says from the answers to the cards sent out it would be easier to say who are not going to the convention than who are going.

The latest prizes reported by Ed. Winterson, chairman of the sports committee, are a silver cup valued at \$25 by W. W. Barnard Co. of Chicago, \$10 by H. A. Bunyard of New York, and several prizes by Wieter Bros.

Following the example of the Tribune's Garden Contest last year, the South End Woman's Club has inaugurated a contest open to the residents of South Chicago. The contests will be decided in September and prizes will be donated by Alderman and Mrs. J. Jones, Mrs. Wm. Gillies, Mrs. Ed. L. Bishop, Mrs. J. C. Vaughan and Congressman James R. Mann.

Chicago has a plan on foot for utilizing 30 acres of land just outside the limits on the southwest and known as the Gage Farm, as a nursery for growing trees to be used in the city streets and parks. The Gage Farm belongs to the city and if this plan is carried out it would be put in the hands of the City Forestry Association. The place is a very valuable one and at present is rented for only a fraction of the yearly taxes.

The City Gardeners' Association held their meeting, Saturday, August 8th, in the partly completed bungalow which is being erected for their use on a tract of land east of Marshall Boulevard and south of the Bridewell bridge. About 75 gathered to get advice from Mrs. Laura D. Pelham, president of the Association. The land comprises 160 acres, the use of which was donated by the McCormick Reaper Co. It is divided into small farms, 160x50 ft. in size, which are rented at \$1.50 for the season. All plots have been rented and most are flourishing.

Personal.

Miss Nelda Wolf of Budlong's, is visiting Denver and other Colorado points.

John Zeck will leave for Cincinnati on the 18th in time for the bowling contest.

The Misses Schiller of "Schiller the Florist," have returned from an outing in Michigan.

Joe Curran has severed his connection with the Leopold Koropp Co. on Evanston avenue.

Miss Hertha Tonner has returned from a lake trip, which included stopovers at several Wisconsin cities.

Mr. and Mrs. J. Simpson are on an eastern trip. They will spend some time near Lake Champlain, at Mr. Simpson's boyhood home.

Visitors: "Billy" Graff, of Columbus, Ohio; Mr. Powell, Goshen, Ind.; C. C. Wonneman, Mexico, Mo.; H. E. Philpott, Winnipeg, Man., Can.

Miss E. M. Schneider of the E. M. Schneider Co., has been to Seattle, Wash., and registered for three land openings. Chicago women are not lacking in enterprise!

Wm. J. Smyth is still unable to

leave the hospital where he has spent most of the summer, owing to a lamentable automobile accident recorded at the time in HORTICULTURE.

ST. LOUIS NOTES.

Messrs. Smith, Angermuller, Schoenle and Borg were on a day's fishing trip last week with good results.

Oscar Hurttemann, manager for The Tower Floral Co., has returned from his vacation, which he spent up north.

The Bentzen Floral Co. are this week moving into their new store, built especially for them at Grand and Herbert streets.

Miss M. S. Newman, together with Miss Armstrong, is enjoying the cool breezes at Green Mountain, Colo. They are expected home September 1.

Shaw's Garden has quite an attraction this week—a very large fruiting tree of the Screw Pine of the Pacific Islands. The mention of it in the daily papers brought out a good attendance.

John B. Barnard has resigned his position with the W. C. Smith Wholesale Floral Co., and started with his wife for Denver, Colo., August 9th. The change of climate was for the benefit of Mrs. Barnard's health.

John L. Duffy, for many years chief engineer of the park department, has resigned his position. Mr. Duffy has accepted a position as chief engineer for the Board of Education. Mr. Duffy has a host of friends among the local florists.

INDIANAPOLIS PERSONALS.

Carl Sonnenschmidt sails this week for a three months' trip abroad.

Walter Bertermann is spending his annual vacation at Atlantic City.

Homer Wiegand has left on a three weeks' auto trip through Indiana and Ohio.

Adolph Baur, of Baur & Smith, left with his family for the northern lakes for six weeks.

Anthony Wiegand and wife will sail for home Sept. 15 after three and one-half months' travel abroad.

NEWS NOTES.

Medicine Hat, Can.—The greenhouse property of the Rosery Flower & Seed Co., at the southwest corner of City park, has been placed in the hands of a receiver.

Meriden, Conn.—The Blatchley Co. are planning extensive changes and improvements in their store and nurseries.

Wheaton, Ill.—On the night of July 28 one of the buildings at E. T. Wauzer's place was burned, and but for the heroic work of the men and their ingenuity in using the equipment on the grounds all the buildings would have been destroyed. Mr. Wauzer was with his family at Pentwater, Mich.

Los Angeles, Cal.—The horticultural commissioners are preparing to enter suits against several property owners for the collection of bills incurred in fumigating trees and shrubs to destroy scale pests. The law provides that the property on which such work is done shall become security for the cost of fumigation.

Flower Market Reports.

BOSTON When the wholesale cut flower trade was invented, conditions such as face the operator in that line today were unforeseen. The dealer of the present time has problems not dreamt of twenty-five years ago when the S. A. F. first displayed its banner as the friend of the florist and his work. We have wholesale commission men, markets of various brands and box-men of antique design and mediaeval flavor, but all have to come to the same finish, when products predominate and buyers are conspicuous for their inconspicuousness. At such times the truthful recorder has difficulty to maintain his reputation for veracity and diplomacy. Have you looked into the aster question? Why should they sell for 25 cents a hundred this year and what is the matter with them, anyway? **HORTICULTURE** was the medium for some good advertisements last year of aster seeds of the higher grades, but it looks as if the growers for this market had placed their orders where price and not quality counted most. Not for a long time have we seen the aster supply in Boston so inferior; and there are millions of them. Sweet peas of good quality are difficult to find. There are plenty of low grade flowers and they are bringing all they are worth. As to roses, the fact is that many of the buds coming in are from young stock and valueless for market purposes. The hot weather of last week had a bad effect on all, American Beauty in particular, but the cooler temperature now prevailing is having a beneficial effect. The best flowers at present are Kaiserin and Maryland. The latter is growing in popularity and although Killarney is still a popular favorite, Maryland is to all appearances a sure winner.

CHICAGO This market shows little change as the month advances. The conditions prevailing cannot be said to be unusual for this season of the year, unless the absence of rain is to be regarded as more trying on the outdoor stock than usual. Asters are probably suffering most in this respect and the market is full of short-stemmed and imperfect stock. There are comparatively few good asters here and when a really good-sized order comes in it is hard to fill it. Wieland & Risch are bringing into their wholesale store as fine stock as can be seen anywhere, and in conversation with Mr. Risch, he said: "The time is gone by when asters are profitable. If a man wants to make money on asters he can best do so by letting them alone. We grow the best varieties under the most approved methods, using the best seeds which can be bought, but with the high price of seeds and the low price of blooms we do not get our money back for the seeds alone. We grow Vick's Mikado and start the seeds in the house, but asters are not in the game when roses and carnations can be grown as they now are all the year round." Beauties are improving and other stock is about as last week, both in price and quality.

We always look **INDIANAPOLIS** for dull trade at this time of the year, but the past week was an extremely dull one, nothing doing the entire week. American Beauties and Killarneys are about the only roses arriving in good quality. Gladioli are fine and meet with a fair demand. Lilies of all kinds prove to be good property. The market is now practically divested of carnations and asters are coming along in quantity, although the quality is not what it ought to be by any means. Green goods, with the exception of fern leaves, are not very plentiful. Briefly stated, there is enough of almost everything except business.

NEW YORK Asters to right of them, asters to left of them, gladioli in front of them and scarcely a street fakir even in sight—that's where the wholesale florists find themselves oftener than otherwise this week. So rapidly have the aster and gladiolus hordes been rushed in upon the beleaguered wholesalers that sales other than bargain lots are a rarity and the net returns to the growers of these things will not go far towards the purchase of tickets to the Convention. Those who have nice roses don't fare quite so badly, and there is room for a reasonable quantity of lily of the valley and a few orchids, etc., but after all there is very little doing in any line. Dahlias have made their appearance and will soon begin to crowd the asters, while "golden glow" and a few bunches of hardy hydrangea quite suffice for the thrifty retailer's window adornment.

There was a big **PHILADELPHIA** over-supply of poor asters last week which made the market appear to be in worse condition than the sluggish summer trade recorded in our previous week's report. But on sizing the whole situation up, trade volume was

very little different. The rush of gladioli has slackened up somewhat, but the quality still remains excellent. Roses generally are plentiful and good for the season. American Beauties are excellent, with clean foliage, and well-colored flowers, and are in brisker demand than any other rose. Libertys are fairly good. The best white of course is Kaiserin, although some pretty good Brides have been arriving lately, also good Killarneys. What few carnations there are coming in are very poor and are mostly of the left-over vintage. The outdoor crop of carnations does not seem to have panned out as strongly as usual this year, probably on account of the drouth. Very little doing in orchids. These are scarce and higher priced; but the demand is light also. It would not take many flowers to knock the bottom out of this market. Lily of the valley is fine and in excellent demand.

ROCHESTER Trade has for the past few weeks been slack as usual at this time of the year. Asters are getting to be a pest around here and it seems as if everybody in the trade, and out of it, is growing them. The market is glutted and prices are way down, even for best quality. Roses are plentiful, with Kaiserin leading, but quality below standard. Sweet peas and other outdoor flowers come in heavily, most of them good. A novelty in the way of a yellow chrysanthemum, has been in since the second week of July, but the stock is limited and the grower very reticent. (Probably Golden Glow, Ed.)

Philadelphia—Skidelsky & Irwin Co. have moved their offices from North 7th street to more central quarters in the Betz Building, Broad street and City Hall.

A. L. Jones, of Pennock-Meehan Co., left on the 9th inst. for a two weeks' vacation. His itinerary includes Nova Scotia and other points East.

Para. 668. Seeds: Anise, canary, caraway, cardamon, cauliflower, coriander, cotton, cummin, fennel, fenu-greek, hemp, hoarhound, mangel-wurzel, mustard, rape, Saint John's bread or bean, sugar beet, sorghum or sugar cane for seed; bulbs and bulbous roots, not edible and not otherwise provided for in this section; all flower and grass seeds; evergreen seeds; all the foregoing not specially provided for in this section. Free.

NEWS NOTES.

Edward Edwards, formerly of Middletown, R. I., is now installed as gardener at the Marble House, Newport, R. I., the residence of Mrs. O. H. Belmont.

L. Merton Gage of Orange, Mass., informs us that gladioli in that locality are fully three weeks later than usual, due to the continued drought, but the plants are looking well.

A. E. Kunderd of Fort Wayne, Ind., has bought the entire flowering stock of his partner, Mr. Rice, has sold his place and intends to locate at Goshen, Ill., and continue raising his ruffled gladioli.

Nephrolepis Elegantissima Compacta

Another New Fern Originating with Us, to be Introduced Fall, 1909

Of all the valuable introductions in ferns that we have sent out, beginning with the Pierson (*Nephrolepis Piersoni*), we consider *Elegantissima Compacta* the most valuable of all, particularly from a commercial standpoint.

While this resembles *Elegantissima* in a general way, it is far superior to that variety, on account of its perfect habit. Yet it can hardly be compared with *Elegantissima* except in a general way, because it occupies a place by itself, and is as distinct from *Elegantissima* as that variety is from *Piersoni*—in fact it bears the same relation to *Elegantissima* that *Scottii* does to *Bostoniensis*.

Elegantissima Compacta has an ideal habit. The fronds are considerably shorter than those of *Elegantissima*, and it is a more compact plant. It throws a great many more crowns naturally, making a very bushy, dwarf, compact plant. The difference between the two varieties can be seen at a glance.

Fine, strong plants, 2½-in. pots, \$5.00 per doz., \$35.00 per 100; 4-in. pots, \$7.50 per doz., \$50.00 per 100; 6-in. pans \$1.50 each; 8-in. pans, \$3.00 each.

We make a specialty of all kinds of *Nephrolepis*, carrying a large stock of all sizes at all times — *Piersoni*, *Elegantissima*, *Superbissima*, *Bostoniensis*, *Scottii*, *Whitmani*, *Amorphohii*, etc.

(PHILADELPHIA SECTION)

Why You Should Buy in Philadelphia

SHORT ACCOUNT OF HER PROGRESSIVE BUSINESS FIRMS—ALL STRONG SUPPORTERS OF THE S. A. F.
—AND THEIR ENTICING OFFERS OF SEASONABLE AND UP-TO-DATE HORTICULTURAL PRODUCTS

HORTICULTURE is pleased to make a little innovation on this important occasion and present in impressive and attractive form the business facilities and business offers of one of America's leading horticultural centres. We believe our readers will find much in this narrative of Philadelphia's eminence which will interest and instruct and we bespeak for these advertisers who have invested so liberally as well as for all other advertisers in HORTICULTURE, from whatever locality, the close attention of all who are in the market to buy horticultural material of any sort. Although it is our purpose in the near future to give prominence in a similar manner to some other great centres of supply, yet we will just say in justification of the conspicuous position accorded to Philadelphia at this time that our chief reasons are—first, its loyalty to the Society of American Florists, unswerving from the day of the Society's birth to the present twenty-fifth anniversary. In the second annual report of the Society almost one-half of the recorded membership was from Pennsylvania. Second, the many important horticultural firms in that neighborhood who do a continental—many of them a world wide business with the trade—and who have been large factors in the development of the present high standing of our profession as compared with what it was a quarter of a century ago. Third, the extensive offerings these firms present in this issue of up-to-date horticultural products which every florist in the country is interested in. It is another demonstration that the Philadelphians are not slow in putting their best foot forward, and they deserve all that is coming to them. We have pleasure in noting herewith some salient features of a few of these concerns a perusal of which will, we believe, speedily emphasize the points referred to.

W. E. McKISSICK & BROS.—This firm was established in the wholesale commission flower business in 1905 under the name of W. E. McKissick which in 1908 was changed to W. E. McKissick & Bros. by the admission of two brothers: A. P. and Howard E. McKissick. W. E. McKissick, founder of the house, graduated from the good school of Samuel S. Pennock where he had an experience of nearly eight years after which he was associated with Leo Niessen for five years and for a part of that time was vice-president of the Niessen company. The McKissick firm has been very successful and today holds a very high stand-

ing in commercial circles. All the members are keen business men and not so narrow minded but that they can take an interest in Florists' Clubs, Horticultural Societies and other utilities—which promise only indirect benefits. We consider them the type of men who will carry our business through to the future with high ideals.

G. C. WATSON

Representative of Horticulture in Philadelphia.

EDWARD REID.—This prominent wholesale commission florist started in business on 16th street, below Market street, fifteen years ago. A thorough training in the rose growing business with Price, Lansdowne, covering ten years, and a commercial life of four years in field service for Z. De Forest Ely & Co. gave him a foundation and finish that were instantly available; and just the qualities that were needed by a grower understanding how to market products to the best advantage, and by a retailer in having some one to depend on for intelligent service in furnishing the goods. On being asked to state why he had been so successful Mr. Reid said: "I don't know, unless it is because I'm always on my job." Always on my job! There you have a great fundamental, without which no great business is ever established. But it takes far more than being always on your job to make a success. Mr. Reid has many attributes personal and acquired in addition to that—native ability, good training as a grower and

as a seller, combined with the "always-on-the-job." All that, and another important feature—ample capital! We congratulate Mr. Reid on his well-earned success and hope he will live long and prosper.

H. BAYERSDORFER & CO.—In this big, wide-awake florists' supply house is presented an example of what proportions it is possible to reach through adherence to a policy of persistent publicity and enterprise. As stated in their advertisement on the inside front cover page of this paper, this house has been a regular and very extensive exhibitor at every Trade Exhibition of the S. A. F. So well have they followed up their exhibition publicity and their liberal trade paper advertising by travel and personal attention that the two gentlemen who constitute this firm, Harry Bayersdorfer and Paul Berkowitz and their faithful traveling representative, Martin Reukauf, are individually and intimately known in every community where the florist trade has a footing from the Atlantic to the Pacific. Once a year Mr. Bayersdorfer makes a pilgrimage to Europe and nothing of value to the American trade escapes his eagle eye. When you speak of Bayersdorfer & Co., you think of Philadelphia.

JNO. DUNN JR. & CO.—One of the leading firms of custom house brokers; established 1902 by Jno. Dunn, Jr. In 1905 the firm became Jno. Dunn Jr. & Co., by the admission of Jno. A. Steer, who had been for a number of years in the custom house brokerage business, and was familiar and influential in that line. They do nearly eighty per cent of the horticultural brokerage of the port of Philadelphia which tells the story better than any words of ours.

PHILADELPHIA INSECTICIDE CO.

—The guiding hands in this company are Mr. Pullman, the inventor of Pullman's Insect Powder; Louis and Charles Berger, sons of William Berger one of the oldest and best known florists in this vicinity. They turn out from their factory not only the well-known Pullman insect powder but also tobacco extracts and other valuable insecticides. Being practical florists as well as experienced chemists they are unusually well equipped to know the needs of the everyday florist and we think we are stating the case mildly when we say that their products are a boon to the horticulturist—not only in first cost but in practical results. If your seedsman cannot supply, send a postal to 324 Queen Lane, Germantown, Philadelphia for full particulars.

AND
LIBERAL AND JUST PRINCIPLES.

We should be glad to do business with you. Let us get acquainted. We can assure you of pleasant business relations, that will prove to our mutual advantage

THE LEO NIESSEN CO.

WHOLESALE FLORISTS

LEO NIESSEN CO.—Unlike most other successful flower commission houses Leo Niessen the founder and present head of this firm did not graduate from an older house. He just started. He used to remark humorously that he carried his store under his hat. He had no money; but he started all the same—and he looked so frank, and honest and put up his plea for business with such an ingenuous, child-like smile that he proved irresistible. By and bye the hat developed into a store at Juniper and Filbert streets. This was along about 1894. Five years later, his brother Arthur A. Niessen became a partner in the business. At that time the two brothers ran things with the help of a man and a boy. At the present time it takes twenty-five to thirty men and women to handle the business and in the rush seasons many more. Larger quarters at 13th and Filbert streets were occupied for some years, but these also proving inadequate, a central property at 12th and Arch streets was purchased—on which was erected a modern, six-story fire-proof building, constructed of reinforced concrete, and specially designed for the cut flower business. Here has been installed the most up-to-date equipment, including cooling rooms on both the first floor and basement, operated by refrigerating machinery with a capacity of six tons of ice daily, and far more effective and economical than the old system of block ice boxes.

The firm was incorporated under its present title in 1904 with Leo Niessen as president, and Arthur A. Niessen as secretary and treasurer. We congratulate Messrs. Niessen on their well-earned advancement, which has nothing magical about it; but is the result of long foresight—ploughing and sowing and cultivating the field in an intelligent manner year after year. No one can say luck did it; only shrewdness, hard work and liberal advertising—or as they say themselves:—"doing business on business principles."

BERGER BROS.—This firm, composed of Harry and John Berger, was established in the wholesale flower commission business in 1904, at 1220 Filbert St. They had been well trained to the florist trade before this, having been associated with their father, William Berger of Germantown. Their business has been a success from the start and they are looked upon as one of the most promising of the younger firms who have lately entered the ranks.

HENRY F. MICHELL CO.—There are as many ways of achieving success as there are men in the world. When I first knew Henry F. Michell, the founder of this firm, some twenty years ago, he had just started in business for himself at 1018 Market street—succeeding W. H. Smith—or rather, having purchased the stock, lease and good will of that business. Previous to that, he had been with Dreer seventeen years—a good school to graduate from. He struck me then as one of the cautious, conservative kind—the saving, industrious, hard working, conscientious type that form so large a percentage of the successful men of all times and all countries. I have seen no reason to change my

BUYER AS WELL AS SELLER

Much is heard of how to sell goods—the buyer seems to be taken for granted. On the contrary, we think the buyer entitled to equal consideration. Well bought is half sold. We aim to be the faithful servant of both buyer and seller. Equal justice to both is our motto. Send your orders or consignments to us and judge.

We Solicit Your Patronage

opinion of these fundamental characteristics. But he has certainly developed in other ways as success came to him, after the initial heart breaking struggle of the first five years. He has developed confidence in himself. He has developed in enterprise. He has dropped some of his timidity and in short, is rising magnificently to his opportunities. When I speak of Henry F. Michell I speak also of his business. He and it are one. He sticks to it day and night the year round and dominates everything. He has able managers and lieutenants around him now, and a large force of employees; has every department well systematized; but nevertheless he works today just as long and as hard as he did twenty years ago. Mr. Michell is a native of Switzerland, and came to this country with his parents at the age of nine. He got his schooling and early business training in Philadelphia, and in thought and feeling is typically of the City of Brotherly Love. In 1890 his brother Fred. was admitted to

HENRY F. MICHELL

partnership in the firm, and in 1905 the firm became a corporation—most of the stock (if not all) being in the Michell family. Two years ago the Tower Hall property at 5th and Market street was purchased at a price said to be in the neighborhood of \$150,000, (and considered a great bargain at that figure) and a second store, auxiliary to their 1018 Market street store, opened there last fall. Another recent enterprise was the purchase of twenty acres of fine land near Andalusia station, where modern trial grounds have been established. This will be of great benefit in the future development of the business. If any special branch of the seed business were to be singled out as one in which the Michell firm excels, it is in the florists' business. Florists are exacting. They demand the best. Their bread and butter depends on that. The best flower seeds; the best forcing bulbs. Nothing else will do. The initial price of an ounce of flower seeds or a thousand bulbs is a small matter when the final results are figured up. Mr. Michell has always been thoroughly alive to this fact, and has

ever striven to give quality first place—and the fact that the firm does one of the largest businesses in the country among the florists is ample vindication of the wisdom of this policy. Their local or counter trade among the private gardeners and suburban residents is also very large. It is an inspiring sight to see the mob of eager customers, six and eight deep, at the counters during the busy seasons in spring and fall. The public parks in this and many other cities are annually supplied with bulbs and seeds by this firm. Everything for the farm, garden or orchard can be found here. There are perhaps not more than a dozen firms in the whole United States that can show equal quality, quantity and variety.

W. ATLEE BURPEE & CO.—This business was established in 1876, but for some years previous to that Mr. Burpee had been interested in the sale of thoroughbred stock. He was also well known to the farming public from having been a regular correspondent of a number of agricultural papers, but notwithstanding this advertising and prestige—progress in the seed business was slow at first. He tells an interesting story of these early struggles:—"The first year's business showed a net loss of \$3,500, without allowance either for interest or personal salary. The second year's business barely paid expenses, while the third year showed only a profit of \$2,700." Since then, however, with the exception of some years of severe agricultural depression, the business has grown steadily until it is now the largest of its kind in the world, a success based primarily on three fundamental conditions: (1) originality, (2) thoroughness, and (3) advertising. Mr. Burpee early showed his originality by offering collections of seeds at popular prices through the country and suburban papers—a thing at that time unheard of in the seed business—and by which he laid the foundation of his mailing list. He showed originality also in the writing and illustrating of his catalogues and price lists. These were thoroughly fresh and original, and caught the popular fancy amazingly. The second important ingredient in the above recipe—thoroughness—he showed by an infinite capacity for taking pains with everything he did—a tireless energy in following up every hint or suggestion for improvement either in the production or in the distribution of farm and garden seeds. Burpee was always listening. He was very democratic. His manner was always frank, engaging, confidential. Few ever left his office without a pleasant feeling on his mind for Burpee; and few ever got away without Burpee having gleaned some valuable item of out of the way experience from them. Another evidence of this thoroughness is the trial grounds at Fordhook. These are of course of inestimable value not only in showing the purity of stock and fidelity to type, but also, what is of equal importance, in giving opportunity for careful comparisons of present commercial varieties and of promising claimants on probation. These claimants come from all parts of the world—some of them are voluntary, but most of them are sent for. Maybe they already had a fine char-

acter given them in some far away region. What a splendid school this is for keeping the employees as well as the management up to the mark in their knowledge of stocks, with varieties constantly changing from year to year, and what a beneficent influence this hunting and sifting and judging is for the farmers and gardeners everywhere. As for advertising—ingredient No. 3—little need be said, as Mr. Burpee is well known as a brilliant and liberal advertiser. He has this to say about that terrible bogey of the beginner in advertising—Direct Results:—"We do not expect a direct profit from newspaper advertising. Our records, over a period of years, show that each answer costs from 25 to 27 cents. Practically we give away the seeds we advertise; but are willing to do so in order to secure thorough trials. An important factor is the moral influence which advertising exerts. If our advertisements did not appear in the leading papers some of our customers would not be reminded that they had received our

W. ATLEE BURPEE

Farm Annual which may have been laid aside and forgotten. Advertising is as necessary an annual expenditure as the payment of taxes or rent." Mr. Burpee thinks that the method of charging up advertising all to expense account is unfair, as at least half of it might reasonably be considered an investment for the years to come, and charged up to investment account. After thirty-three years of strenuous work in the seed business, Mr. Burpee shows no signs of letting up, personally, but is still at it, as enthusiastically as ever. This summer he has been North to Canada, and the Northwest, among the growing seed crops; through the Western states as far as the Pacific; down South and all through the Gulf states—and at this writing, is traveling in Europe inspecting crops and visiting flower shows—with eyes and ears alert for anything good. He has had an enormous influence on the horticultural and agricultural interests—perhaps as much as any one man now living and in the prime of life, and Uncle Sam is proud of him. Business is more than a business to him. It is a profession—a passion!

"FOUR OF THE FINEST" TRUE SUPERB NEW "SPENCER" SWEET PEAS FOR 1910

Senator Spencer

Although this variety belongs in the darker colored class, the lighter background gives a mass of the blooms a sort of heliotrope tint which is very pleasing. The color is a varying combination of deep claret and chocolate, striped and flaked on a ground of light heliotrope.

It presents a beautiful combination of tints and colors and shows up wonderfully well under close inspection as the dainty detailed markings are most attractive.

SENATOR SPENCER is of the true Spencer form—wavy edges on both standard and wings—large, round, fluffy standard, long drooping wings. Both standard and wings are marked with the same colors and in the same way, with perhaps a trifle more of the wine shading in the wings.

The stems are long and there are usually four good large finely formed flowers on each stem. The description of LESTER L. MORSE on whose grounds this striking new Spencer originated. Our own notes both at FORDHOOK and in California, agree completely with the description quoted. W. A. B. & Co.

Miriam Beaver

MIRIAM BEAVER is entirely distinct in coloring from any other Sweet Pea of either the Grandiflora or Spencer types. It is almost impossible to picture its beauty of coloring and loveliness of form.

The flowers are nearly of a uniform shade,—appearing almost to be a self color,—a rich bright soft pinkish salmon suffused with buff on a primrose ground. The effect is that of a most beautiful soft and bright salmon-pink. At top of standard the color deepens to rose. It is brighter in color than Mrs. Routzahn Spencer. (Last year the field name of this was "Dark Apricot and Straw" while Mrs. Routzahn was designated as "Light Apricot and Straw.")

The flowers are uniformly of the largest size. The standard measures more than two inches across by one and five-sixteenths inch in depth. The wings fold or curl but little, measuring one and five-sixteenths inch wide and one and one-quarter inch deep. Both standard and wings are superbly waved or crinkled; in fact, this unique characteristic of the Spencer type is even more pronounced than in most other seedlings of Countess Spencer. The strong stems, twelve to fifteen inches long, more frequently carry four flowers than three. The vine is very thrifty, the profusion of bloom remarkable, but, like all other first-class true Spencers, it is a very shy seeder.

W. T. Hutchins

The fully expanded flower has the appearance of light apricot (distinctly lemon at the throat), overlaid with a beautiful blush pink. The attractiveness of the flowers when bunched is beautiful beyond description. As the season advances the blush pink shading becomes rather more pronounced.

In form this superb new Spencer is an exact counterpart of the finest selected strains of the beautiful pink or True (Original) Countess Spencer. The vigorous vines flower most freely, the stems are long and carry well three or four fine flowers. Both standard and wings are wavy, ruffled and crinkled of the most advanced Spencer type. The flowers are of the largest size, the standard measures two inches across by one and five-eighths inches deep, while the wings are proportionately as large—one and one-half inches wide by one and three-eighths to one and one-half inches deep.

Prince of Wales Spencer

This brightly colored variety might be described briefly as a glorified "Spencer" type of the popular grandiflora "Prince of Wales." Because of increased size and fluted character of flowers the effect is brighter and more pleasing.

The flowers are brilliant rose-carmine or red, of good size and fine form. The wings are a pure rich rose-crimson and the standard is the same with a tint of cherry-red. The whole effect is that of a brilliant crimson,—clear, distinct and beautiful.

The standard is large, round and wavy; the wings are full and inclined to remain boldly outright instead of drooping.

The strong stems are long and usually bear four blossoms each. The plant is very vigorous and free flowering. PRINCE OF WALES is a variety that belongs in all first dozen sets and will become one of our standard shades in Spencers.

We also offer to the trade AURORA "SPENCER" and OTHELLO "SPENCER" both of which were introduced in 1909 but only at retail.

Othello Spencer

This beautiful new Sweet Pea of the true "Spencer" type will appeal to those having a preference for the darker colors. The flowers come uniformly true to type, being beautifully waved or crinkled both in standard and wings. The stems are thick and long and carry well either three or four fine blooms of a rich deep maroon. It is a strong grower and the intensely dark-colored flowers contrast well with the lighter shades already introduced.

**A Spray of SENATOR
"SPENCER" Sweet
Pea. Exactly natural
size.**

Aurora Spencer

The superbly beautiful flowers are of really enormous size, and come uniformly of the true "Spencer" type. Both standard and wings are waved or fluted to a most pronounced degree. The magnificent flowers are produced most profusely in threes and fours, well placed on the end of long, stiff, dark-green stems. The ground color of the flower is a cream-white, and this is exquisitely flaked and mottled with rich orange-salmon.

Prices to the trade on all the six beautiful New "Spencer" Sweet Peas offered in this advertisement.

1-4 sealed packets: Per pkt. 25c; \$2 per doz. pkts.; \$13.75 per 100 pkts. In lots of 500 pkts. or more, \$12.50 per 100 pkts.
In half size packets: Per pkt. 15c, 2 pkts. 25c; \$1 per doz. pkts.; \$7 per 100 pkts. In lots of 500 pkts. or more, \$6.25 per 100 pkts.

For number of seeds in packets, please refer to circular, copy of which will be mailed on application.

Copies of our "ADVANCE ANNOUNCEMENT FOR 1910" will be mailed on application.

" 25.00 per 100.	
" 200.00 per 1000	

A fine lot of specimen plants in 6-inch pots at \$12.00 per dozen.

HENRY A. DREER, Inc.

Philadelphia, Pa.

PENNOCK-MEEHAN CO.—This wholesale commission house had its initial start in 1881 by Charles E. Pennock, now deceased, at 30 South 16th street. In 1889 the firm became C. E. and S. S. Pennock. Charles E. Pennock died in 1891 and the firm became Samuel S. Pennock. In 1892 the store was located at rear of 42 South 16th street. In 1895 were bought the two

SAMUEL S. PENNOCK

dwelling houses, 1612 and 1614 Ludlow street, the nucleus of the present Pennock Building in which the Pennock-Meehan Co. is located. Other purchases were made in 1898, 1899 and 1900. In 1906 consolidated with Charles E. Meehan (who controlled and practically owned the Philadelphia Wholesale Flower Market Co.) under the title of the S. S. Pennock-Meehan Co. The present officers of the company are: Samuel S. Pennock, president; Charles E. Meehan, vice-president; Percy B.

Rigby, treasurer; and E. J. Fancourt, secretary. Mr. Pennock installed a cold storage plant in 1901, being the first wholesale house to do this. In 1903, a ribbon and supply department was started, in charge of E. J. Fancourt, and through his energy and ability has grown until it is now recognized as headquarters for florists' ribbons the country over. The Pennock Building was designed and built specially with a view of conducting a wholesale cut-flower and supply business. The ice-making machinery is operated by electric power and is capable of producing six tons of ice daily. Owing to the new methods of storing the cold air, the machinery can be shut down for six hours or more at a time and still retain the required temperature. The plant is divided off into sections so that the expansion and contraction of business can be handled without waste; 19,000 cubic feet of cool natural storage in the basement is an adjunct to the regular cold storage facilities. This latter is dust-proof and some flowers are often better here than under regular cold storage conditions. The main floor has an area of over 6,000 square feet, and here the receiving, grading, selling and shipping of flowers is constantly going on, and during the busy seasons such as Christmas and Easter business goes on night and day. The following remarks made by us in our 1907 convention number, on the Pennock-Meehan Co., will bear repetition here:

The mere mention of the names which go to make up the name of this company suggests the thought of sterling business integrity and conservative horticultural stability, for no two names are more closely linked with the best ideals in Philadelphia horticulture for the past half century than are these. The establishment is a good example of the possibilities in the wholesale florist business under wise progressive policies. Visitors to

Philadelphia will find in its equipment much that is interesting and instructive.

THOMAS H. BAMBRICK.—Here is a well-known and popular Philadelphian who for 40 years has been supplying good men skilled and unskilled to the horticultural trade generally. During the forty years, as the pioneer

THOMAS H. BAMBRICK

employment agency man of the East, he has had the satisfaction of placing over a million persons in positions, and in this capacity has been a public benefactor of no small proportions. In this connection we quote an interesting item of news from the Philadelphia papers:

"One of the latest transactions in the Philadelphia business world, which has attracted attention throughout the country, was the recent sale of the Employment

THOS. H. BAMBRICK

34 South 7th Street,
PHILADELPHIA

Bureau business of Mr. Thomas H. Bambrick, one of the city's foremost business men and citizens, to the newly incorporated Pennsylvania Labor Exchange Company.

The consideration was \$50,000 and the company, which now takes hold of this well known forty year old business, has been incorporated under the laws of New Jersey and has interested many thousands of dollars worth of new capital and not only contemplates the erection of a modern twelve-story building on the site of its present offices, 34 South Seventh street, Philadelphia, but likewise includes establishing branch offices in New York, Pittsburgh, Chicago and the West and Europe."

HENRY A. DREER (Incorporated).
—Founded in 1838 by Henry A. Dreer in partnership with Henry Hirst. Two years later Mr. Hirst retired. From the first the active management of the business was in the hands of Henry A. Dreer, then only twenty years old. Henry A. Dreer died in 1873, and was succeeded by his son William F. Dreer. In 1892 the business was incorporated, under the name of the founder, Henry A. Dreer, with William F. Dreer as president; J. D. Eisele, vice-president; Herbert G. Tull, treasurer, and J. Otto Thilow, secretary. William F. Dreer, although active in the business for forty years, is still at the helm, in the strength and vigor of middle life. As soon as he left school he began business with his father, who gave him a thorough business training in all departments. At the age of eighteen he spent a season with one of the largest seed growers in Germany, and a season in a famous establishment in Paris. The European experience thus gained, added to his other training, he put to splendid use in extending and improving the already large business of his father, until the house of Dreer gives employ-

ment to 175 men and women at all seasons of the year, and during the busy season in the spring there are seldom less than 200 employees, of whom from 50 to 60 are engaged at the store, office and warehouse in Philadelphia, and the balance at the

WM. F. DREER

greenhouses and nurseries at River-
ton. As the firm well says in its sou-
venir catalogue of 1908 (commemorating its 70th anniversary)—for a business house to live through 70 years is something! In all the hundreds of business houses which today line Chestnut street in Philadelphia, Henry

A. Dreer is the only one which existed in 1838. But to grow from small beginnings into an organization which reaches into all parts of the world and supplies vegetable, flower and grass seeds, bulbs and plants to hundreds of thousands of customers, is much more! History is valuable only for the lessons it teaches. Its records must mark either progression or retrogression. Especially is this true of the seed, plant and bulb trade, where a successful continuance is dependent wholly upon intelligent and persistent efforts towards betterment of sorts by selection, and towards improvement in methods of production and distribution. This truth was most forcibly put by Henri L. DeVilmorin in 1893 at the Horticultural Congress in Chicago when he said: "All the care, food and protection given to plants may make them larger and finer, but only selection among many of the same kind, with the help of heredity, can fashion an enduring race of plants with special good qualities for our farms, gardens, or orchards. Chance seeding may yield some very good finds, as sometimes a good hit is made by shooting at random. But no good marksman will, even after the luckiest of chance shots, dispense with the use of his eyes and judgment for the rest of the day." Selection, reselection, and then some more selection has been the story of evolution in the seed trade. In the list published by Dreer 70 years ago was included every vegetable we have today with the single exception of Brussels sprouts. 123 varieties of flower seeds were offered of which eighty are still listed. Nearly all of these varieties of both vegetables and flowers have been

ASTER3—A representative summer flower on which we are always strong.

Ribbon Department

Realizing the utility and the vast importance of this branch, and knowing the necessity for every Florist to get shades to match the flowers exactly and stand the inspection of the most critical, we organized this department, which is now the most up-to-date and modern of any wholesale Florist's in the country.

In this department can be found the newest and most desirable patterns—designs and colorings being manufactured to our order especially for the Florist trade. New styles, new fabrics are constantly added, so as to bring the stock up to the highest standard of perfection. We were the first to undertake this branch and offer to the Florist trade "Everything in Ribbons" and had years of experience and knowledge before other houses entered into the field.

RIBBONS

and other seasonable specialties.

Evolution of "The New Kind" of Commission House

TWENTY FIVE years ago when the *Society of American Florists* was organized the commission business was a small affair. Most growers marketed their own products. But as time went by, they began to realize that marketing was a science in itself; and that the expert salesman was indispensable. During these twenty-five years the

S. S. Pennock-Meehan Co.

has gone through a progressive evolution; gaining constantly by experience, perfecting its methods and quickly grasping every improvement to better the service both for grower and retailer. This company not only does an immense business but *the best kind of business*. Its organization combines all the good features of the Modern Flower Market, with none of the objections. It may be fittingly called

"The New Kind" of Flower Market

where everything in Cut Flowers, Plants or supplies can be had; a steady influence in extremes of glut or scarcity; and constantly striving for the highest standards of business methods and morals.

RIBBONS A sample illustration.

Cut Flower and Plant Department

The organization of this department is the development of nearly thirty years' experience, and is and has been along practical lines. It has been brought by selection and elimination as near perfection as possible. Constant vigilance is the watchword for every employee from the highest to the lowest. Great stress is laid on the accurate filling of orders, and the packing system is so complete that we now ship these perishable commodities hundreds, often thousands, of miles from the great Cut Flower and Plant center—Philadelphia.

greatly improved by selection. Hybridizing has contributed to improvement, particularly in the fruiting types of vegetables, such as tomatoes, potatoes, egg plants, peppers, etc., but the steady and constant march forward through seven decades has been achieved by virtue of the sure, unflinching method of careful and intelligent selection. The Dreer greenhouses, nurseries and trial grounds, are located at Riverton, within half an hour's ride of the city, and constitute one of the show places of Philadelphia. The greenhouses alone, cover upwards of five acres. Dreer's was the first American house to grow decorative and ornamental foliage plants on an expensive scale, and has been the means of bringing many varieties of palms, ferns, araucarias, pandanus, etc., etc., within the reach of everyone, and has helped to make these plants as much a part of the decoration of a room as its furniture. They have also made a specialty of stove plants, their catalogue describing more varieties than can be found in any other American list, and all of which find an important place either in house decoration or in the furnishing of the greenhouse and conservatory. To illustrate the rapid growth of the business take one item only: Ferns. Twenty years ago all the ferns sold were grown in a greenhouse covering less than 400 square feet. Today, over 65,000 square feet of glass, with a large staff of specialists, are devoted to fern growing, and more than two million plants are distributed every season. The business in hardy perennials, and other outdoor subjects, hardy and otherwise hardy, is also very large. Ten acres are devoted to peonies and as much more to phloxes. Of cannas, a quarter of a million are distributed annually. Twelve years ago the sales of dahlias totaled 8000 roots. Today over forty acres are devoted to their cultivation, and over 300,000 roots are grown for one season's sales. In giving this brief sketch of Mr. Dreer and his establishment, we must not forget to say a word about the chief of the plant department. We know he always has the uneasy feeling of the ultra modest man when one attempts to say anything nice about him. He can stand chafing a great deal better than a little bit of honest praise. He says William F. Dreer is directly and in every way responsible for the planning and building of the mammoth establishment. When you ask Mr. Dreer he says Mr. Eisele did it.

Whichever way the truth lies the monument is big enough to do for both, and at all events Mr. Eisele is universally recognized as the foremost man in his line today. Not only that, but a Herculean worker. Seventeen hours a day is nothing to him. If work calls—which means duty and necessity to him—the day of rest set apart by Divine command has to be sacrificed, and those other days of rest set apart by a patriotic republic are not even given a thought—they practically don't exist for J. D. Eisele. He is the real and only original tireless and sleepless florist!

M. RICE & CO.—Started in 1885 as the Philadelphia Immortelle Design Co. at 904 Filbert street; changed in 1892 to Marschuetz & Co., and on the death of Mr. Marschuetz in 1894 assumed its present title. While originally specialists mainly in immortelles, the business gradually broadened until it now covers the entire field of florists' supplies. The firm is now composed of M. Rice and B. Eschner, and occupies its own five-story fireproof building at 1220 Race street, designed and built specially for this business. When this building was erected less than 10 years ago the problem seemed to be what to do with all the room, but additional warehouse space has now become necessary. The concern manufactures its own specialties to a large extent, as well as importing from all parts of the world, and there is scarcely a town of any importance in North America but what holds one or more of its customers. Mr. Rice states that their fiscal year ending July 1st last was the best in their history.

ROBERT CRAIG CO.—This business is celebrating the fiftieth anniversary of its foundation—the father of the present head of the firm, Alexander Craig, having started in the florist business in 1859, down in what is termed by Philadelphians "The Neck." In 1864 moved to 15th and Pine street; continuing there until 1871 when the firm of Craig & Bro. was formed, with a retail store at 11th and Walnut street, and greenhouses at 49th and Market streets. Robert and George Craig were the partners, George taking charge of the retail end. This continued for twenty years until 1891, when the rapid specializing of the growing business made it advisable to operate independently. Robert took

over the greenhouse plant and operated same under the title of Robert Craig & Son. Fourteen years later (in 1905) the concern was incorporated as The Robert Craig Company, with Robert Craig, president and Robert A. Craig, his son, as secretary and treasurer. Another son, W. P. Craig, has recently been admitted as vice-president. All the members of the original firm are more or less interested in the new company financially; but the active management is in the hands of the president and secretary. The glass area is about 110,000 square feet. The 49th and Market street locality is rapidly building up with residences and is now too valuable for greenhouses so the intention is to move the entire plant in a year or two to Norwood, a suburb nine miles southwest of Philadelphia on the Pennsylvania R. R., where a tract of land was bought some ten years ago, and where greenhouse building has been actively going on during the past year in anticipation of this move. When completed this establishment, Mr. Craig says, will be unsurpassed in the country for convenience and compactness. The great specialties of the company are foliage and flowering plants; palms, ferns, crotons, rubbers, begonias, cyclamens, lilies and all kinds of Christmas and Easter plants. A considerable space is devoted also to cut flowers, principally roses, carnations and gardenias. In meritorious new plants Robert Craig Co. are usually among the leaders. They were the first to demonstrate the commercial value of the Crimson Rambler rose as an Easter plant. They were prompt in adding others of this family. They captured the original stock of *Ficus pandurata* when others could see nothing in it; brought it to this country and quickly demonstrated that it was one of the greatest foliage plants of the century. They were large factors in the introduction of the Lace Fern (*Amerpohlii*), and for the past twenty years have had much to do in the introduction of new forcing roses, even including that great staple, American Beauty, either independently or in conjunction with others. The same with many good carnations. In short, for two decades Robert Craig has been one of the foremost in seeing merit in new things, and has done a striking service to American floriculture in demonstrating the value of these introductions. His judgment has seldom been at fault in this connection. In this short sketch we have dwelt purposely on the

business achievements of Robert Craig, as these are not so often emphasized in current literature as are his winning personality and his fame as a leader and speaker in social and professional movements. Men like Rockefeller may take pride in their vast accumulations, achieved by craft and combination and the ruin of the honest unwary; but men like Robert Craig have done far more admirable things—they have worked to beautify and enrich the world and will leave a sweeter fame behind them and more enduring when their time comes to be gathered to their fathers.

PENNOCK BROS.—This retail florist house was founded forty-five years ago by Abram L. Pennock. The location was then on 12th street between Market and Chestnut street. In 1866 his brother Joseph Liddon Pennock was admitted and the firm name became Pennock Bros., which it has remained ever since. On account of failing health J. L. Pennock retired and shortly thereafter Thomas Cartledge and John Westcott became partners. The present members of the firm are J. Liddon Pennock, (a son of Abram L. Pennock) and A. B. Cartledge, (a son of the late Thomas Cartledge). The store is located at 1514 Chestnut street and is a model for completeness and up-to-date equipment. Notwithstanding keen competition, brainy and aggressive rivalry, this old house holds its own, getting its full share of the *creme-de-la-creme* of the flower trade of Philadelphia.

GODFREY ASCHMANN.—In the florist business at 1012 Ontario street since 1886—previous to that he had been a jobbing gardener for seven years. His three sons—John, Howard, and Edward—are now associated with him in the business, which has grown to considerable proportions. Mr. Aschmann makes a specialty of flowering and foliage plants for Christmas and Easter—particularly begonias, azaleas, lilies, palms, and araucarias. He does an extensive shipping trade, having worked this up by unique advertising methods through the trade papers. The glass area is estimated at 25,000 square feet. Much of the stock offered for

sale is imported—Mr. Aschmann making frequent trips to Europe for the purpose of selecting the best bargains.

DINGEE & CONARD CO.—"The home of the rose"; located at West Grove, Pa., about two hours from Philadelphia and tributary thereto. Charles Dingee at the age of 85, the original head of the firm, founded in 1850, is still hale and hearty and while interested is not now engaged in the active management of the company. The concern is now conducted by younger men who grew up under Mr. Dingee's able training. Probably the most widely known of these younger men to the commercial trade is P. Joseph Lynch, the financial man of the company and its general manager. This company has the unique distinction of being the first to grow roses on their own roots and, when these had developed into sturdy little plants, to offer them by mail at popular prices. They are the original mail order house as far as the rose is concerned. The establishment has 70 greenhouses devoted almost exclusively to growing roses. Hardy shrubbery and other outdoor stock is also grown at West Grove and Charlotte, N. C. The Charlotte nursery is devoted mainly to the production of large two, three and four-year-old roses for which the demand has been rapidly increasing—although the mail order trade for smaller plants shows no signs of waning. Mr. Lynch when interviewed on this subject of larger or smaller roses, had this to say:

"We are often asked the size of roses most preferable, and our invariable response is that that is a matter that can only be decided by the purchaser. One-year-old roses give splendid results, and the only difference between them and the older plants, is in the comparative yield of flowers. The two-year-old roses, of course, produce a larger quantity of flowers the first year, while the three and four-year-old are more desirable for immediate effect. Owing to the reasonable price at which we sell one-year-old plants it is possible, for a small sum, to purchase quite a collection and we find the demand for the one-year-old roses has in no way diminished."

On being asked if the "little slips"

that were sent through the mails gave much satisfaction, Mr. Lynch was quite emphatic in denying that the term "little slips" described the roses they sent out. Continuing, he said, "What we do sell are strong and sturdy, grown in Nature's own way, backed by half a century's experience of knowing how—no dark secrets—just plain, ordinary common-sense methods, a little brains and the consciousness of a reputation for square and honest dealing to sustain."

PEACOCK DAHLIA FARMS.—This is the incorporated title of the greatest dahlia enthusiast of the present generation, Lawrence K. Peacock. Although located across the river at Williamstown Junction, in New Jersey, the establishment is essentially within the business zone of Philadelphia. Away back in 1884 while yet in his teens L. K. Peacock started in an amateur way with a collection of a dozen varieties such as Arabella, A. D. Livoni, Frank Smith and others of what he now calls "the old guard" but which, notwithstanding all the improvements of the past 25 years, he still considers worthy of a place. To him more than any other man the dahlia in America owes its popularity in this generation. Fifty or sixty years ago it had its day as now; but the revival of the present only began about fifteen years ago—and Peacock was its prophet, priest, and king. The Peacock Dahlia Farms cover about 115 acres—50 of which are entirely devoted to dahlia culture. For twenty-five years, hardly a flower show has taken place within hundreds of miles during dahlia season but what Mr. Peacock has attended with exhibits of his favorite—showed them lovingly, talked about them to everybody enthusiastically, lectured about them until the whole world and his wife simply had to sit up and take notice. He has written books about them, compiled catalogues and penned articles innumerable for magazines, newspapers and trade journals. Today he is still at it as enthusiastic as ever. His two latest sensations: Jack Rose, crimson, and Virginia Maule, light pink, he considers the best cut-flower sorts yet introduced.

HENRY F. MICHELL CO., SEEDSMEN AND BULB IMPORTERS
1018 & 518 Market St., Phila., Pa.

SWEET PEAS AT FORDHOOK IN 1909.

W. Atlee Burpee & Co. had on trial this year 723 samples of tall varieties of sweet peas; 15 samples bush varieties and 27 samples of Cupid varieties. Before looking over the samples from spring-sown seed it is interesting to go over the vines that were produced from samples sown late last summer, and early and late fall. A number of the leading varieties were sown at three different times in order to ascertain the advantages of fall planting. The vines from seed sown in September did not carry through the winter. Vines from seed sown in October carried through fairly well, but the very best lot were those produced from seed sown early in December, when it was just cold enough to keep the seed dormant until the spring rains and sunshine warmed up the ground gradually, causing the seed to swell and make a fine lot of roots before real hot weather set in. If you have some well drained-soil it would be worth your while to try experimenting with a sowing of some sweet pea seed this fall, or really during the early part of the winter or about December 1st to 10th. In this connection Ernest F. Hoehl's plan of running a board up each side of the row and covering with panes of glass will hasten flowering by at least two

weeks. This brings the flowers in at a time when the commercial demand for same is very good. I will get Mr. Hoehl to give us full particulars later.

As one passes down the long rows of the older or grandiflora types they must stop to admire the beauty of these flowers and, after all, it is a question whether for the general planter the Spencer varieties are destined to displace these older sorts. There are some magnificent flowers on the grandiflora vines—color good and stems long, but the size is small as compared with the Spencer varieties, of which we find in the trials this year almost every known variety or departure in color.

Mrs. Routzahn Spencer.—This, unfortunately, like some of the varieties that preceded it, has not held true to type, but the correct flowers are really superb. The color is buff or apricot brown, lightly overlaid with delicate light pink.

Othello Spencer.—Color the same as in the old grandiflora. The size of bloom and length of stems are tremendous as compared with the older variety.

Senator Spencer.—One of the four new varieties Burpee & Co. purpose introducing in 1910. The ground color is light heliotrope, with stripings and flakings of deep violetish maroon.

Miriam Beaver.—One of Burpee's four new sorts. One of the handsomest of all the Spencer varieties now on trial, the color a combination very difficult to describe. The flowers are nearly a self color—rich salmon pink, tinted with buff, the ground work primrose.

Prince of Wales.—Another of the

Burpee four for 1910. In color identical with the older variety, or it could be put down as simply a rosy crimson self.

America Spencer.—A sample from stock seed on which they are now working and the variety will not be ready for introduction for a couple of years. This is very similar to the English variety sent out under the names "President" and "Paradise Red Flake."

Ramona Spencer.—This was sent out last year and is a beautiful variety. The soft pink tinting on the white ground makes a combination that will harmonize well with any other color.

Dainty Spencer.—Just a few seeds planted for trial of this variety, which will probably be offered to the public by 1911 and will perhaps be known by the English name, "Elsie Herbert" (although some in the trade are endeavoring to avoid a multiplicity of names as far as possible), but Elsie Herbert in color reminds one more of Modesty.

Helen Lewis.—This is very fine. The rich crimson-orange standards contrast well in color with the orange-rose wings.

Burpee's White Spencer.—We are very glad to see it here perfectly pure and true and the substance of the flowers, color and length of stems makes it without exception the very best white in cultivation.

King Edward Spencer.—One of Burpee's introductions for 1909 and we are glad to note that it came perfectly true. Stems very long, the flowers extremely large and the color is intense carmine scarlet.

Queen Victoria Spencer.—Another of

PEACOCK DAHLIA FARMS**Williamstown Junction, New Jersey**

the introductions of 1909. Did not hold true to type but we are assured that with the careful roguing done on the crops this year that seed as offered for sale will prove very satisfactory. The color is deep primrose flushed with rose.

Beatrice Spencer.—Although rather smaller flowered than some of the other varieties, is very pretty and is an exact duplicate in color of the old Princess Beatrice.

Mrs. Sankey Spencer is another variety of which the flowers are a trifle small and may best be described as being a black-seeded white.

As we go down the rows looking over the different samples we note that it is not only the American stocks of the newer Spencer selections that break, but many English stocks here on trial for the first time have broken quite as badly and it seems to the writer that really there has been perhaps a bit too much haste on the part of the dealer to place these newer sorts on the market.

Apple Blossom Spencer is perfectly beautiful, the large standards contrasting well with the softer colored wings.

Lovely Spencer.—Another 1909 introduction. Is very pretty, the wings being soft pink with blotch of rose at base and the standard being of the same shade of pink with a dash of dark rose in the midrib.

Tennant Spencer.—Another of the 1909 introductions. This is the same color as Dorothy Tennant. A rosy purple varying to a magenta shade.

Florence Morse Spencer is a superb variety and has been; we understand, offered in England under several different names.

Burpee's Primrose Spencer, we are also pleased to say, has responded to severe treatment and is now very pure, indeed.

Asta Ohn is a beautiful new variety of a very delicate shade of lavender.

Lady Althorp from across the pond is the same as Mrs. Sankey Spencer.

W. T. Hutchins.—This variety, named in honor of the Rev. Mr. Hutchins, is in color precisely the same as Stella Morse, which we would describe as being light apricot shaded with beautiful bluish pink. This is the fourth variety that Burpee & Co. expect to introduce in 1910.

Aurora Spencer.—When the variety having the same name of the grandiflora type was introduced several years ago it was thought much of but, really, this new selection now with all the Spencer characteristics is superb. It bunches beautifully and should quickly become very popular.

Mrs. A. Brown.—An English variety. Was found to be the same as Asta Ohn.

Evelyn Hemus, a very delicate pink on cream ground, is similar to Mrs. Routzahn but considerably lighter in color.

Mrs. A. Ireland, introduced in 1909, is quite similar to Burpee's Apple Blossom,

but it differs in that it is on a cream ground while the American variety is on a white ground.

Dobbie's Mid-Blue, while not of the Spencer type, is very pretty. Entirely distinct as to color, which it holds well, not being marbled any by the hot sun. It is a lighter "Navy Blue."

To go over the entire list of the Spencer varieties alone and attempt to describe each sample would probably require an entire number of our publication.

Before bringing this report to a close we feel as if we should again call attention to the value of St. George as the best of the orange or salmon class of sweet peas and a variety of which the blooms attain such size that in some instances they wave, or crinkle as do the Spencer varieties.

GEORGE C. WATSON.

During Recess

CHICAGO FLORISTS' CLUB.

Oh You Little Old Twenty-fifth Anniversary Convention S. A. F. O. H.

Is Chicago Going to the Convention?
Well, We Guess Yes!

We want you and your best girl, and the kids and your neighbors to go with us. Will you go? Send a postal quick and say how many will come with you. We want to be sure there is enough ice water and things to go around. Get in quick, because General Wiley (he owns the Monon Road) says he can't pull more than twelve cars on this special, and if you don't line up early you may have to sit on the hind steps and not take part in the cotillion (good word that; we don't know what it means, but think it will be that, or that will be it).

Everybody pays his own freight but Chicago "furnishes the trimmings."

We are going to have the slickest special train that ever went south; vestibuled so you can't fall off.

We shall pull out of Dearborn Station on the Monon—C., H. & D. at 2.30 p. m., Monday, August 16th next, sharp (that is if J. C. Vaughan isn't late; but we shan't wait for him long, because he will get there anyway).

We shall cut Indiana in two and pick up Koles of Kokomo, Carmody, the poet from Posey, Bertermann, Weigand and the other old war horses from Indianapolis, and we'll take Gurney Hill, dear man, to our manly bosoms, and father Dorner, too.

NOTE.—President Valentine will not be allowed to have his "bum bowlers" practice in the aisles of the cars. No bowling for them except in the buffet car. This is the only thing we shall refuse the great man this trip.

There will be music all the way. The Little German Band has been cleaned and renovated for this occasion. The famous impresarios, Monsieur Edouard Wintersohn, Don Carlos Mackellarr and Leonardo Killinski will not only render solos but join in the toot ensemble, giving Wienerwurstky's symphony.

There will be more kinds of music than you ever heard before, and the whole state of Indiana and part of Ohio will know that President Valentine and the Chicago Florist Club are going to the convention.

There will be a myriad of other attractions.

The sylphlike danseuse, Filfoley, will do the Salome dance (if we can get cloth enough for the tights). Think of it! That petite, willowy, three hundred and twenty-nine pound gazelle, Baby Foley, in tights. Sure no one can ask more than that.

George D'Asmus will pull off a few

stunts. That marvellous wizard, Nick Wieter, will perform a few sleight-of-hand tricks with cards, assisted by Billy the Kid (well), who will also play the bones. The wonderful Poehlmann Bros. will perform their hair-breadth, dare-devil, acrobatic eccentricities, and Arnold Ringier will play the balcony in Romeo and Juliet.

There will be hosts of other attractions, mostly equally good, better or worse.

Buy your ticket by the Monon and C., H. & D. Railroad and come along.

Be a live one now, you'll be a long time dead.

WRITE—'PHONE—TELEGRAPH or TELL P. J. FOLEY, Chairman Transportation Committee, Chicago Florists' Club, Twenty-sixth street and Western avenue, Chicago, Ill.

REMEMBER the President's Special by the Chicago Florists' Club, assisted by the Monon Route—C., H. & D. Railroad, MONDAY, AUGUST 16, 1909, 2.30 p. m.

FLORISTS' CLUB OF WASHINGTON.

The annual outing of this club was held at the Great Falls of the Potomac on Thursday, July 29th. Special cars were beautifully decorated in oak leaves and flags. It was a jolly crowd that spread over the beautiful grounds at the falls. The afternoon was spent in all kinds of games and sixteen races were run, for which prizes were offered by members of the club. Not until about 10 o'clock did the greater number of the merry makers feel inclined to turn their faces homeward, all averring that it was one of the most pleasant outings that the club had ever enjoyed.

INDIANAPOLIS FLORIST CLUB.

The Indianapolis Florist Club picnic was held July 29, with a large attendance. A spirited game of ball between the north and south side florists was won by the former by one run, the score being eight to nine. Numerous other events for men, women and children took the greater part of the afternoon and were much enjoyed.

DETROIT FLORISTS' CLUB.

The Detroit Florists' Club enjoyed its annual picnic at Bois Blanc Park on Monday, August 9, going by Steamer Columbia.

Nature copied our daily habit of watering everything thoroughly in the early morning for copious showers came down and caused considerable disappointment, but shortly after getting under way the clouds cleared away and the boys and their families spent a lovely day of recreation and sport. Among the out of town florists present were Mr. Boehringer of Bay City and Mr. Flessinger of Lansing.

Within fifteen minutes after the boat landed Capt. Rahaley and Capt. Charvat had their teams lined up on the diamond and an extremely spirited game was played, finishing with a score of 15-14 in favor of Capt. Charvat.

The rest of the program was carried out with many contestants to each event. The winners were:

Boys' race, under 10, Myron Bloy, Howard Knope; under 16, B. Pautke, Thos. English.

Girls' race, under 10, Olive Frey, Mildred Unger; under 16, Olive Frey, Ella Pautke.

Men's race, Hugh Watson, S. Beard. Fat men's race, Fred Pautke, Ferd Barker.

Ladies' race, Jennie Watson, Etta Holman.

Three legged race, Beard and Vargo, Miesel and Brown.

Running broad jump, Hugh Watson, T. Beard.

Hop, skip and jump, H. Watson, S. Charvet.

Shoe string race, Tracy Miller, Ed. Pautke.

Tug of war, East Side. Quoits, M. Bloy.

A FARMERS' PICNIC.

A farmers' picnic will be held at "Park White City," Chestnut Hill, Pa., August 26, 27, and 28. Farmers' products, agricultural implements, and industrial work will be among the exhibits. The seedsmen, florists, and nurserymen have been invited to attend, and also to exhibit some of their specialties if possible. James K. Thomson, the secretary, has an office at the park, and will be glad to hear from anyone interested. Prizes will be awarded.

Obituary.

Professor William H. Ragan.

Prof. W. H. Ragan, Assistant Pomologist and Expert in Nomenclature, Bureau of Plant Industry, Department of Agriculture, passed away at the Homeopathic Hospital in Washington, D. C., Friday, August 6th at 4 p. m. He was a prominent figure in American pomology and has for a number of years held an important position in the government service. He has written many volumes on pomological subjects and his reputation is world wide. He was Secretary of the Indiana Horticultural Society for nearly forty years; he was superintendent of Pomology at the Cotton Centennial at New Orleans in 1884-5, and held the position of secretary to the Mississippi Valley Horticultural Society for some years and was secretary of the Committee of Awards in the Department of Horticulture at the Exposition in Chicago, 1892. For many years he has been Chairman of the Revision of the Catalogue of Fruits for the American Pomological Society and has been a lifelong member of that Society, doing much for the cause of fruit growing throughout the country, especially pioneer work in the states beyond the Mississippi river. He was born in Putnam Co., Indiana, in 1836 and was the son of the late Reuben Ragan, a well-known pioneer pomologist of that state. He is survived by his wife, Mrs. Emily Sherwood Lee Ragan of this city, and his two daughters, Mrs. N. E. Woods, Clayton, Indiana and Miss Belle Ragan of Chicago, Illinois. Mr. Ragan was secretary of the Indiana State Board of Horticulture for ten years and was later president of that board. He was a trustee of Purdue University for some years and served one term in each branch of the Indiana State Legislature, and though in no sense a politician, he did this at the unanimous demand of his constituents. He was a man of sterling worth, ready wit, keen insight, and his versatility on pomological subjects has rarely been equalled. His death is an irreparable loss to the cause of pomology the world over. Mr. Ragan was a cousin of the late John Clark Ridpath, the well known historian.

WANTS, FOR SALE, ETC.

Advertisements in this column one cent a word. Initials count as words. Cash with order. All correspondence addressed "care HORTICULTURE" should be sent to 11 Hamilton Place, Boston.

HELP WANTED

HORTICULTURE needs a wide-awake representative in every town in the land. Good commission paid on advertising and subscriptions. If you are ambitious, write for terms.

WANTED—Experienced grower for commercial place near Boston; must be good grower of carnations especially. Good salary to the right party. Address, with references, Carnations, care of HORTICULTURE, 11 Hamilton Place, Boston.

SITUATIONS WANTED

HAMMOND'S PAINT AND SLUG SHOT WORKS

Fishkill-on-Hudson, N. Y.

FOR FLORISTS' AND GARDENERS' USE

30 YEARS OF PRACTICAL TEST OF THESE IN THE U. S.

GRAPE DUST is excellent to check Spot on Chrysanthemums and Black Fly, also all sorts of Mildew on Roses, Vegetables under glass, etc. It is put up 5, 10 and 25 lb. bags, in kegs and barrels. It is extensively used at the present time in the United States. Sold by the Seedsmen of America.

CATALOGUES RECEIVED.

McFarland Publicity Service, Harrisburg, Pa.—Examples of Autochrome Color Engraving.

Wm. Elliott & Sons, New York.—Mid-season List of Pot-Grown Strawberries and Vegetable Plants.

Francis Brill, Hempstead, N. Y.—Wholesale Price List of Long Island Cabbage and other special seeds for market gardeners and other critical trade.

Routzahn Seed Co., Arroyo Grande, Cal.—List of Sweet Pea and Nasturtium Novelties of 1909 Introduction. Especially interesting to dealers who wish to handle the latest introductions for next spring trade.

Burnett Bros., New York—1909 Catalogue of Fall Bulbs. Colored illustrations of daffodils and tulips on front and back cover. A creditable catalogue, early to appear and sure to bring business to this enterprising young seed house.

J. A. Peterson, Cincinnati, Ohio, is sending out a set of handsome views

of his houses of Lorraine Begonias, Adiantum Farleyense, Pandanus Veitchii, Hydrangea Otaksa, etc., with invitation for a visit when at the Convention.

Atlas Portland Cement Co., 30 Broad street, New York, N. Y.—Manual of Concrete Construction about the Home and on the Farm. A finely illustrated book of 160 pages, giving full instructions for all processes in cement construction. Every greenhouse man should send for a copy. It's invaluable and it's free for the asking.

NEWS NOTES.

Forest Supervisor Bushnell reports that the seedlings which were set out this spring at the Muskrat nursery, near Boulder, Mont., on the Helena national forest, are doing finely.

In Los Angeles County, California, 70,000 trees were fumigated for scale last year, and vigorous measures have been taken this year. The report of the county horticultural commission on this point is interesting reading.

"Every Bug Has his Dose."

Insect-destroying preparations that do their work well and effectively are the cheapest. Bowker's Arsenate of Lead and Bowker's Pyrox are recognized standard insecticides and fungicides for both indoor and outdoor use. Bowker's Insect Emulsion destroys many kind of plant lice, black and green flies, etc. Call or send for catalogue.

MASSACHUSETTS HORTICULTURAL SOCIETY.

New varieties of phloxes were the feature of the exhibition, Saturday, August 7, at Horticultural Hall. There were other flowers, but phloxes predominated, and beside the displays of new seedling varieties of phlox there were several new gladioli. The special competition for the best five consecutive exhibits of hardy herbaceous flowers and plants continues with un-

abated interest, and played no small part in making this exhibition a showy one. In the latter class R. & J. Farquhar had a fine collection, in which phloxes were shown as the central feature, red and purple varieties predominating. These were backed by herbaceous flowers, and in front was a border of roses, including handsome Killarney. A novelty in this collection was a new species of lily from northern China. George Hollis showed a fine collection of named phloxes. B. F. Tracy was represented by some stunning seedling gladioli. Phloxes, gladioli and dahlias were shown by W. W. Rawson & Co., phloxes and other hardy herbaceous flowers by Bellevue Nurseries, Old Town Nurseries and J. F. Flood & Co. Among the private contributors were Mrs. J. L. Gardner, Wm. Whitman and Walter Hunnewell. Mr. Whitman's exhibit was quite extensive.

a generous donation from Mrs. T. J. Emery. Dahlias will be the main feature of the show and as they never looked better in this locality, it is safe to predict that the show will be a record-breaker.

Articles of incorporation have been filed by the Oregon Horticultural Society in order that it may legally receive a bequest recently left to it.

NEWPORT (R. I.) HORTICULTURAL SOCIETY.

At a regular meeting of this society, held on the evening of August 10, another important addition was made to the premium list for the September show in the shape of a valuable silver cup offered by Rickards Bros. of Bridgman's Seed House, New York. This cup is placed for a table decoration to be competed for on the third day by Newport county gardeners; and Mr. S. G. Harris of Tarrytown, who was present at the meeting, also offered a liberal money prize for a vase of 50 H. T. roses. There is still another class added since the schedules were distributed, which is for a miniature flower border, and is provided for by

FLORISTS' CLUB OF WASHINGTON.

The regular monthly meeting of this club was held on August 3rd at 916 F street, with President Kramer in the chair and Jas. S. Carbery acting secretary. A vote of thanks was tendered Geo. Shaffer and committee for the successful way in which the recent outing was managed, also to Supt. Theodore King of Old Dominion R. R. for courtesies shown. (See "During Recess.")

It was voted that at the auto flower parade on Sept. 30th, the club enter a touring car decorated entirely with natural flowers, not in competition. A good part of the evening was spent in discussing the respective merits of the natural and artificial flowers for decorating cars. The consensus of opinion was in favor of natural flowers.

A cash donation was made for the committee to use for the purchase of flowers to decorate the car, and also for a cup to be awarded the handsomest car decorated entirely with natural flowers.

The acting secretary was instructed to ascertain from the Chamber of Commerce their attitude in regard to decorating with natural instead of artificial material; also to ask their views in regard to having two sets of judges, if both kinds of flowers are to be used, and to request that the club be allowed to appoint the judges for natural flower cars of out-of-town men.

President Kramer announced that the forthcoming flower show will be held at the old Masonic Temple from November 7th to 14th.

MARKET GARDENERS' PICNIC.

The first annual outing of the Market Gardeners' Association of Boston, will be held at Peddock's Island, Boston Harbor, Saturday, Aug. 14. Boats leave Rowe's Wharf at 6.20 a. m., then hourly from 9.20 a. m. to 8.20 p. m.

The list of events includes the usual races, ball game, jumping, etc., and a juicy time is promised. The seed stores and various market establishments have contributed silver cups for everything. The cups, numbering about two dozen, have been on display in the windows of H. E. Fiske Seed Co., and Schlegel & Fottler Co., and made a dazzling attraction for the market district.

NORTH SHORE HORTICULTURAL SOCIETY.

At the regular meeting of the North Shore Horticultural Society, August 6, the discussion was on "What Are Hardy Perennials?" and "Culture of Physotegia." The silver cup offered by Mrs. Philip Dexter for best and largest collection of vegetables to be competed for at the August show (August 25-26), was on exhibition.

CLUB AND SOCIETY NOTES.

The grange at West Bath, Me., are planning for a flower show in August.

The Iowa florists will hold their annual meeting in Des Moines on September 1.

The National Nut Growers' Association will hold their annual convention at Albany, Georgia, October 12, 13, 14.

Secretary William Stuart of Burlington, is soliciting funds to be applied to an exhibit of the Vermont Horticultural Society at the New England Fruit Show in October.

Horticultural displays will be one of the leading features of the Ohio State Fair and Industrial Exposition at Columbus, August 30, 31, September 1, 2, 3. Liberal premiums are offered for fruits and flowers.

The Omaha (Nebr.), Florists' Club held their picnic at Manawa, July 29, under the able management of L. Henderson, Geo. Sorenson, Oscar Herman and Secretary Hess. All the florists closed their places of business for the afternoon.

The Inter-Town Dahlia Association met at the home of P. E. Carmody, in Ansonia, Conn., on August 2, and discussed plans for the approaching show. September 18 was selected as the date and Peter Zuger of Hartford, was chosen as judge.

The Gardeners' and Florists' Club of Boston will hold a field day at the nurseries of W. B. Whittier & Co., Framingham, Mass., on Saturday, August 14. They will leave Park Square, Boston, at 1 o'clock in the Boston and Worcester electric; running time, one hour; fare 20 cents.

The Northern Indiana Florists' Association held their annual meeting at Winona Lake on July 20. They were entertained by the Warsaw florists in

The Perfection of Up-to-Date Greenhouse Heating Science

AUTOMATIC HOT WATER CIRCULATOR

The Castle System of forced circulation of hot water for greenhouse heating is the only one that has demonstrated its practicability, economy and perfection of action. It works while you sleep and if anything should happen to put your forced circulation out of commission, this device takes up its work automatically. Its use **increases** the efficiency of your heating plant but **reduces** the expense.

Don't contract for any other device represented to be "just as good," etc., until you have first carefully investigated and ascertained what the **Automatic** does.

THE CASTLE BOILER

Lower values for your product means closer operation of your greenhouses. You must have greatest efficiency with the least expense.

The **Castle Boiler** is the best hot water heater for greenhouses on the market today. It insures great economy in first cost, reliability, and above all, in expense of operation. This will appeal to the good business judgment of anyone contemplating new construction or remodeling the old plant. Don't build a greenhouse or remodel the old plant without securing complete information regarding the **Castle Boiler**.

THE CASTLE COMPANY

FROM THE INSIDE—OUT

You know there is not a house built today, no matter what the construction, that has the extreme lightness, beauty and practicalness of our U-Bar Curved Eave.

Just look at this side view! You never saw anything like it in any other house! It is the patented U-Bar Construction that makes such an interior possible. At no points are there heavier roof supporting members than you see right in this interior, and all these are galvanized steel, aluminum finished.

If you want a house that you can show to your friends with the satisfaction of knowing it is the lightest and most attractive, "the best there is," then the U-Bar is the house for you.

It might be well to drop us a line at once.

KING CONSTRUCTION CO. :: North Tonawanda, N. Y.

A CHARMING LITTLE RANGE BUILT OUR CURVED EAVE WAY

NOW that we have at last brought the curved eave construction down to an every way practical proposition, by combining it in a special way with our Sectional Iron Frame Construction; our curved eave house bids fair to be *the house of the future*.

It certainly has the facts of increased lightness and added attractiveness on its side. You see from the interior view what a skeleton of light-

ness the roof and sides can be when built Land B way. Such a house, built such a way, has all the points of durability in its favor—not a theoretical durability,

but a proven durability. Proven by its twenty-eight years test.

No matter what kind of a house you intend building, it will be decidedly to your advantage to talk it over with us. If it is to be a curved eaved house, you take a long chance if you don't.

Nephrolepis Elegantissima Compacta

Another New Fern Originating with Us, to be Introduced Fall, 1909

Of all the valuable introductions in ferns that we have sent out, beginning with the Pierson (*Nephrolepis Piersoni*), we consider *Elegantissima Compacta* the most valuable of all, particularly from a commercial standpoint.

While this resembles *Elegantissima* in a general way, it is far superior to that variety, on account of its perfect habit. Yet it can hardly be compared with *Elegantissima* except in a general way, because it occupies a place by itself, and is as distinct from *Elegantissima* as that variety is from *Piersoni*—in fact it bears the same relation to *Elegantissima* that *Scottii* does to *Bostoniensis*.

Elegantissima Compacta has an ideal habit. The fronds are considerably shorter than those of *Elegantissima*, and it is a more compact plant. It throws a great many more crowns naturally, making a very bushy, dwarf, compact plant. The difference between the two varieties can be seen at a glance.

Fine, strong plants, 2½-in. pots, \$5.00 per doz., \$35.00 per 100; 4-in. pots, \$7.50 per doz., \$50.00 per 100; 6-in. pans \$1.50 each; 8-in. pans, \$3.00 each.

We make a specialty of all kinds of *Nephrolepis*, carrying a large stock of all sizes at all times — *Piersoni*, *Elegantissima*, *Superbissima*, *Bostoniensis*, *Scottii*, *Whitmani*, *Amerpohli*, etc.

The Iris as a Cut Flower

If cut just before opening, and placed in water, irises often have a delicacy they do not have in the open. They continue to blossom a long time. One will bloom and remain open for days, then it wanes and another takes its place, and so the succession is kept up. If you are to ship them don't wait for full bloom, for then they are so fragile they are easily marred. We have been surprised at their adaptability as cut flowers. Often they have been thrown on the cellar floor just as they commenced flowering, and they would keep right on with their work for a week as though not detached at all. First the oldest flower would gradually fade, and then another would come out, and this would pass away, and there would be another recruit to fall into line. When they are to be shipped some distance they are gathered first before opening, and the most forward of the buds are wound lightly with raffia which is removed when they reach their destination, when they open beautifully.

It is astonishing, however, with what caution and reluctance people take to new things. The Iris is one of the most resplendent flowers for Decoration Day, fully equal if not superior to anything else offered. Yet notwithstanding their ravishing beauty they are rejected. People move in ruts. A few years ago the peony was ignored. It was nothing but a "piny"—no one wanted it. Years passed by, and finally their beauty and fragrance won a place, and people cannot get enough for Decoration Day. If they can't get roses, carnations, and peonies, they consider themselves wronged, and the florist has abused them by not furnishing them their pet flowers.

A lady goes to buy flowers for a friend's grave. Roses and carnations are gone. But here are the glorious Chalcedonias, the fragrant and splendid Palidas and the exquisite Elegans of elysian beauty—the fairest flowers that ever opened their petals to the sun, surpassing by all odds anything offered, but the lady says, "Yes, they are pretty, but I wanted carnations," and she goes out with a long drawn sigh and tells her friends "I couldn't get any flowers today." A tear trembles on her eyelashes as she says with most pathetic voice, "The grave of my dearest friend must go unadorned." If you would hand her one of the most exquisite flowers plucked from Paradise itself, no matter how alluring its loveliness, how exquisite in form or attractive in fragrance she would reject it because it was not a carnation or a rose. We have seen the most charming bouquets of columbines of red, white and blue put up in the most tasteful manner for soldiers' graves rejected for some inferior, insignificant things because they were called roses and carnations. This is rather a cruel snub for some of the most charmingly dressed visitors that ever came to earth.

Instead of eternally traveling in the ruts and confining one's self to two or three favorites it is better to reach out and give a cordial welcome to all—to the whole procession of beauty.

We have seen beautiful bouquets of pyrethrums with their cheerful and winsome smile rejected because "I am not acquainted with them."

It will not, however, be many years before irises will find their way into the admiration of those who love the beautiful. Their long season of blooming from April to August, their surpassing beauty and fragrance will give them a prominent place. The finer sorts are yet rare and by the time they are raised in quantities to meet the demand they will receive cordial reception. At first the peony had to combat the reputation of the old-

fashioned "piny"—people remembering the ill smelling flowers of their mothers and could not believe the modern ones were as fragrant as the rose.

Talk to them of the Iris which is woven with the deft skill of Him who put the garments on the sun and painted the petals of the violet and the rose and they say, "Oh, yes, we know them. They are nothing but flags. They used to grow by the thousands in the swamp back of our house." They ignore the 169 other kinds which didn't grow in their swamp, with the numerous hybrids which have gathered all the tints of earth and sky into their radiant garments.

York, Nebraska.

C. S. Harmon

Ixoras

Among all the greenhouse flowering shrubs the genus *Ixora* deserves to take a high rank. Their fine deep green foliage, and fine attractive flowers, together with their good keeping qualities, deserve better recognition from plant lovers than they get. The natives of Malabar where some of the species are found, thought so well of them, in bygone days, that they tendered them as an offering to their god *Ixora*, hence the name. It may be, that the memory of the humid stove heat that they used to be grown in, in the old country, deters plantsmen here from growing them much. But in this country, in the summer, they do nicely in a slightly shaded ordinary greenhouse with plenty of air on it, and in winter I have seen them carried over in a temperature of 50 to 55 degrees.

Ixoras, are natives, mostly, of tropical Asia and Africa, but travelers tell us that they can now be found in nearly every tropical clime where the European has taken up his abode. The following garden hybrids and seedlings are among the best that are grown. *I. Chelsoni*, with flowers of bright orange-salmon, shaded with pink. *I. Colei*, a very free flowering variety, with large white flowers, a strong vigorous grower. *I. decora*, flowers yellow, flaked with rosy-crimson. *I. Dixiana*, undoubtedly one of the best grown; its dark orange flowers being produced freely makes it a handsome exhibition plant. It has a very vigorous constitution. Some of the older frequenters of Massachusetts Horticultural Society may remember how well Wm. Martin, gardener for N. T. Kidder, used to grow this variety. *I. Fraseri*, with leaves of a rich dark green, free and vigorous in growth, and brilliant salmon colored flowers. *I. Pilgrimii*, a fine hybrid, I believe from *I. Williamsii*, a good one for those who have not got control of much heat, doing well in a much lower temperature than some of the others. Flowers are of a bright orange-scarlet shaded with crimson. *I. profusa*, a fine exhibition variety with rosy salmon colored flowers, freely produced. *I. Williamsii*, a very free grower, flowers large, and of a reddish salmon color, one of the handsomest I have seen.

Ixoras are easily propagated. A piece of moderately firm wood, cut between the joints, with two leaves attached, inserted in sand, in a temperature of 70 degrees, will root in a few weeks. After they are rooted I find they grow very freely in a fibrous loam out of which all the fine material has been shaken. I have seen others do them well in peat, with a good mixture of silver sand through it. The above described cutting will generally start into two leads, and if rooted in spring will flower in summer, forming, if desired, cunning little plants, in two and two and one-half inch pots, which look very pretty, scattered around a dinner table, which has one

in a five or six inch pot for a centre piece. That size of plant can be grown in two years, with six or seven nice flowers on it, provided it be kept in vigorous growth and cut back about twice.

By a little manipulation in pruning and drying off one can have *Ixoras* in flower at various seasons. For instance, I have seen *Fraseri* flowered at Easter, in mid-summer, and quite late in the fall, and I think if some enterprising florist could get some two-year-old plants that have been rested a little, and prune out the centre of the shoots, in early summer, and start into vigorous growth, he could flower them for Thanksgiving or Christmas. After flowering, *Ixoras* can be rested, by withholding water and lowering the temperature from 70 to about 55 degrees. It is astonishing, considering that they are evergreens, how much drying off they will stand, if not done too suddenly at the start. I have seen them treated in this manner for two months, and when started into growth they seem to be more vigorous for it. If pruned at this stage, it certainly makes the shoots flower more evenly together.

Clay's fertilizer and cow manure water are good stimulants for *Ixoras* when in vigorous growth if applied carefully. The best thing I know of for keeping down insects on them is a 2-inch potful of kerosene added to three gallons of water and kept well agitated while being applied. This should be done every three weeks.

George F. Stewart.

West Medford, Mass.

The Constancy of Sweet Peas

An interesting discussion concerning the constancy of sweet peas took place last autumn and winter in the columns of "The Gardener" between Mr. Robert Sydenham, Birmingham, and Messrs. E. W. King & Co., Coggeshall, Essex. Mr. Sydenham was of the opinion that the new waved varieties would be liable to sport. Messrs. King & Co. offered to send for trial to University College gardens, Reading, ten varieties of waved flowering sweet peas, twenty seeds of each, and Mr. C. Foster offered to have them grown. Mr. Sydenham agreed to pay £10 to gardening charities and all expenses if there were not more than two rogues in any one variety. If any one variety produced three rogues then Messrs. King & Co. were to pay. The editor of "The Gardener" and Mr. Foster were to act as the judges. The plants are now in flower and the judges have furnished the following particulars:

Name of Variety.	Number of Plants that grew.	Remarks.
Evelyn Hemus	15	One rogue, bright rose color.
Countess Spencer	15	One rogue, rose colored.
White Spencer	18	True.
Mrs. Henry Bell	15	One rogue, purple.
Marjorie Willis	19	One rogue, light rose.
Blush Spencer	15	True.
Paradise Ivory	15	True.
Princess Victoria	16	True.
Mrs. Wm. King	15	True.
Malcolm's Waved Primrose	12	True.

It will be apparent that the trial is in favor of Messrs. King & Co., not one variety having given rise to two rogues, let alone three. This trial has proved to be one of great interest and value, and it is a matter for satisfaction to know that Waved or Spencer varieties of sweet peas will come true.

CHARLES FOSTER, H. H. THOMAS, Judges.

Notes from the Arnold Arboretum

The Maples which belong to our most ornamental trees figure among the new Chinese introductions to a considerable extent and even the following enumeration is not at all complete, those of doubtful hardiness in this latitude having been purposely omitted. The most interesting as well as distinct and graceful in regard to their foliage are the species with trifoliate leaves, a group peculiar to Central and Eastern Asia of which until recently only two species from Japan, viz., *Acer cissifolium* and *A. nikoense* have been in cultivation. The latter was introduced about sixteen years ago and has proved perfectly hardy at the Arboretum; and is particularly beautiful in autumn when the leaves turn bright scarlet; recently it has been discovered also in Central China. The other species of this group are all Chinese and have mostly smaller and more graceful foliage than *A. nikoense*. The most ornamental of them is probably *Acer Henryi* on account of its fruits which are bright red while young and disposed in pendulous racemes from five to seven inches long including the stalk; the elliptic or ovate leaflets are mostly entire, from two to three inches long and borne on long and slender stalks. Much smaller foliage has *Acer griseum* with ovate, coarsely toothed leaflets grayish white beneath and usually less than two inches in length; its fruits are disposed in small clusters. *Acer sutchuense* has the leaflets lanceolate in outline, crenately serrate and from two to three inches in length; the fruits are borne in short-stalked rather small clusters. *Acer mandschuricum* from Manchuria much resembles the last named species, but there are only from one to three fruits in a cluster; the leaflets are bluish white beneath and borne on slender bright red stalks. A very distinct species with undivided leaves from Central China is *Acer Davidi* with the fruits borne in long and drooping racemes; the oblong crenulate leaves are from three to seven inches in length and turn yellow or red in autumn. A graceful Maple is *Acer tetramerum lobulatum* with birch-like leaves which are ovate in outline and long-pointed, sharply toothed or even slightly lobed and from two to three inches in length. *Acer Franchetii* resembles somewhat the Sycomore Maple, the leaves are from three to four inches long with three to five short lobes. *Acer sinense* is also one of the large-leaved Maples with five-lobed leaves of bluish green color. Similar to the Norway Maple but smaller are *Acer laetum tricaudatum* with roundish leaves from two to three inches broad and furnished with three short, but long-pointed lobes and *Acer laetum tomentosulum* with somewhat larger leaves pubescent on the under surface and furnished with three to five long-pointed lobes.

A neat broad-leaved evergreen shrub which promises to be hardy, as small plants of it have stood during last winter uninjured, is *Sarcococca pruniformis* from Central China. It belongs to the Box family and is a small shrub with short-stalked entire leaves ovate in outline, pointed and from one to two inches long; the small white flowers are borne in dense axillary clusters and followed by small berry-like fruits of dark blue color.

British Horticulture

SWEET PEA ENTHUSIASTS

July has been a memorable month for the National Sweet Pea Society. The members have paid a visit of inspection to the official trials which have again been held in the gardens of the University College at Reading. On the following day a journey was made into rural Essex to view the seed farms of several leading growers who specialize in sweet peas. Essex is the largest seed producing county in Britain. Owing to the remarkable boom in sweet pea culture, an increased acreage has been set apart for this popular annual. One grower alone has 50 acres allotted to it. The seeds are drilled in in October, in lines about 20 inches apart. For spring sowing the growers either drill the seeds, or dibble the seed out in March. The choicest varieties are grown on sticks, and are sown or dibbled out in rows from five to six feet apart. The ground is carefully hoed during May and June. At the time of harvest the unstaked lots are cut down and set aside for the threshing operation. The mixtures are generally threshed by machinery, and the named varieties by hand, to obviate any risk of mixing the sorts. The Society's annual show, notwithstanding the adverse season, was a great success, the entries and quality alike being excellent. In the non-competitive section, W. A. Burpee, of Philadelphia, received a gold medal for an admirable collection, which included Orange Spencer, Helen Pierce, W. T. Hutchins, Lady George Hamilton, Primrose Spencer, and Mrs. C. W. Breadmore. This firm was included in the list of prize donors, as were also C. C. Morse and Co., Santa Clara, California.

SOME INTERESTING TRIALS

The Floral Committee of the National Sweet Pea Society have adjudicated on the varieties included in the Reading trials. About 350 stocks were submitted from the leading growers. The premier novelty is a waved cream, raised by W. J. Unwin, who has put several meritorious varieties on the market. A first-class certificate has been given to this novelty, which bears the name of Clara Curtis. Mr. Unwin likewise obtained an award of merit for a new scarlet flake, on a white ground. Charles Foster is the name of an introduction emanating from Mr. R. Bolton, and it has attracted considerable attention for its remarkable coloring—light mauve with bronze tinge; an award of merit has been allotted. The same raiser has another new-comer (Lancashire Pink), which was highly commended. Sun-proof Crimson, which if it justifies its title should be a great acquisition, was shown by Dobbie and Co.; this received an award of merit. The same firm's stock of Mrs. Henry Bell, was recommended by the committee as a good thing in that tint. Awards of merit were also granted to the following: Edrom Beauty, rosy orange, from A. Malcolm; Dazzler, similar to St. George, sent by C. W. Breadmore; The Colleen, with a bright rose standard, and lighter wings, shown by W. Deal, was recommended as a garden variety; and Queen of Spain

Spencer, from A. G. Stark, as a market variety. It is of a delightful shade of shell pink.

NITRO BACTERINE CULTURE

Professor Bottomley, in a paper recently read before the Royal Society, explained a discovery he had made that two varieties of bacteria working together actually give nitrogen to plants which do not belong to the leguminosae. Many experiments were needed before it became possible first to isolate the two varieties, and then combine them in a form which allowed of their being applied to plants so that the product of the partnership should notably stimulate and improve them. Prof. Bottomley has succeeded in doing this, and the non-leguminous culture of nitro bacterine is the result. In one case 500 hyacinth bulbs of equal size were planted out, 250 in each of two beds; one bed was watered twice with the culture; the other was not treated. The bulbs were weighed after being dried at the end of the season. The result showed 18.6 per cent. in favor of inoculation. In another case half a bed of parsnips was watered once with the culture; all the parsnips when ready were taken up and weighed. The treated half yielded 65 roots, the average weight being 6.55 ounces per root. The untreated half yielded 68 roots, the average weight being 5.38 ounces per root. This shows an increase of 21.7 per cent., each root averaging 1.17 ounces more than the untreated. The experiments carried out on grain crops also showed good results. Two crops were sown, and when weighed an increase of 83 pounds was found in favor of the treated crop. Pot experiments were also carried out, and, as is usually the case when exact conditions can be maintained throughout showed an even greater benefit from this bacterial partnership.

ITEMS OF INTEREST

The National Carnation Society recently held its annual show in London. The premier blooms were as follows: In bizarres or flakes, Admiral Curzon, a prettily marked white, red, and crimson variety; Picotees, Alcestes, clear white with pink edge; yellow self, Daffodil.—The members of the Horticultural Club have had a very enjoyable outing to Ascott, Leighton Buzzard, the residence of Mr. Leopold de Rothschild, and at Mentmore, Lord Roseberry's picturesque estate.—The recently formed National Vegetable Society has decided to hold trials of spring cabbages and winter onions. Mr. Alexander Dean has been chosen chairman of the committee, and Mr. Owen Thomas, vice-chairman.—At the Royal Horticultural Society's fortnightly show on Aug. 3rd, Messrs. Veitch and Sons, of Chelsea, made an interesting display of their double or treble cordon-grown gooseberry trees in pots. Some 120 varieties of this fruit were shown.—Sweet pea mould or mildew is very prevalent in some districts this year.—A novelty shown in London lately was a delphinium, with large white flowers and a black centre.—A prominent feature at the annual show of the Royal Horticultural Society of Ireland was the very representative character of the trade section.—In an English garden a strawberry has been grown, with a large calyx, with a number of smaller fruit and foliage at the apex.

A misleading abbreviation

Our esteemed London contemporary, The Market Growers' Gazette, in quoting an article on "Lilium giganteum" from the pen of Aug. Doemling, which appeared in HORTICULTURE last spring, makes the very

natural mistake of interpreting the article as referring to the true *Lilium giganteum*, a very different plant from the *L. longiflorum giganteum*, which is what is meant when "giganteum" is spoken of, in commercial circles, in this country. This incident teaches us the desirability of being more explicit in matters of nomenclature. The tendency to abbreviate words in these hustling days is very prevalent and is, we often think, carried to an unreasonable limit. "Valley," "gigs," "catts," "daffs," "cyps," and "Romans" may come handy to the hurried dealer at times, but, for general use, these curtailments are to say the least, inelegant and not infrequently misleading.

Looking to the future

In our issue of last week we took opportunity to present in condensed form the opinions of the various ex-presidents of the S. A. F. as to the necessities of the horticultural field and the lines upon which advancement should be striven for. We are now enabled to add to the list the views and recommendations of the present honored presiding officer of that body as promulgated at the quarter-centennial gathering at Cincinnati. The document is an able one, giving evidence of a close study of the history and circumstances, the possibilities and limitations of the Society as heretofore and at present conducted. Whatever may be the immediate disposition of these recommendations it cannot be questioned that the presentation and the consideration of the topics treated in so earnest, thoughtful and dignified a manner must have a wholesome and invigorating effect on all those hearing or reading them. The florist's trade and professions allied with it have never lacked for men of high intellect who have been able and willing to speak and to act for it when occasion demanded. The number and proportion of such is now, however, far in excess of what they were when the S. A. F. came into being. A goodly representation of the commercial horticultural workers of today get their mental pabulum from sources other than emanations of the "yellow" correspondent and these are the men who will shape the course of floriculture in the time to come and direct the affairs of the national society so that it shall worthily represent them. These are the people to whom the president especially addresses his words; they are the men whose influence and example must be secured for the organization if it is to fill the glorious possibilities so vividly forecast by both President Valentine and Secretary Rudd. The closing of the first quarter century of the Society of American Florists undoubtedly marks a distinct epoch in American floriculture. The signs all point to this. Innovations in policies and far-reaching methods which were beyond the vision of the pioneers are now due. New and broader responsibilities await those who are to lead the Society onward and upward until it shall become a world-wide force. And the "Old Guard" can with justifiable pride and a comfortable conviction of duty well performed, hand over their charge to their successors, doubting not that the record as it will be written at the close of the next quarter centennial will reflect the highest lustre upon the grand old society. We close with a quotation from that noble representative of the fraternity of a quarter century ago—Thomas Meehan: "*Horticulture affords scope for a greater breadth of human knowledge than any other pursuit.*"

FLORICULTURE AT THE UNIVERSITY OF ILLINOIS.

With the opening of the college year, the University of Illinois will offer a regular course in floriculture leading to the degree of Bachelor of Science in Floriculture. The work required for this degree will include, besides the floricultural subjects of which every florist should have a working knowledge, such subjects which not only broaden the student but are necessary for a successful career. In other words the object of the course is to give instruction in those branches which will fit men and women for the floricultural profession.

The requirements for admission to this course are those which govern admission to the College of Agriculture. Entrance may be secured three ways:

1. By diploma of graduation from an "accredited" high school.
2. By examination.
3. By earning entrance credits in the academy or by private instruction.

These points are fully elaborated in the catalogue issued by the College of Agriculture.

The equipment for carrying on the work of the course will consist of a service building, four greenhouses and the gardens.

The service building is a one-story plaster structure containing a large and well lighted work room, offices, cutflower cool-room, storage rooms and a boiler room. These rooms are equipped with the necessary tools for the operation of the plant.

Connected with the service building, by a corridor or connecting house, are four greenhouses each 105 x 28 feet, and, while primarily intended for experimental purposes, furnish much material for class work. The facilities for instruction will be greatly increased by devoting one of these entirely to the general work of the course.

Those buildings are all of the best type of modern construction and make a model commercial plant. The buildings are heated from an independent heating plant thus giving an excellent chance for the study of greenhouse heating. The remainder of the greenhouse equipment is that of a commercial place.

The experimental work being carried on in the houses is all on a commercial scale and is open to study by all students in floricultural work.

Fronting the service building is a sunken garden about 200 x 250 feet, filled with various kinds of tender bedding plants. This garden, as well as the herbaceous garden, is open to the use of the students.

Instruction will be carried on much in the same manner as in the other courses by means of lectures, quizzes, and laboratory work. The laboratory work will consist of actual practice in the greenhouses so that the student may become familiar with both the methods and the plants. It is intended

FLORICULTURAL GREENHOUSE, UNIVERSITY OF ILLINOIS

to develop a student, who upon graduation, will be fitted to enter a commercial position.

The greater part of the work of the course is composed of subjects which are required of all candidates for the degree of Bachelor of Science in Floriculture. These subjects are arranged in a definite order representing the logical order of presentation. The student is also allowed to elect such other courses as he desires, in order to fill out the number of hours necessary for graduation.

The subjects required of all students in floriculture are as follows:

Plant Houses—A study of construction, heating, ventilation, cost and maintenance.

Plant Propagation—Study of graftage, layerage, seedage, etc.

Spraying—The theory and practice of spraying for insects and fungi.

Landscape Gardening—A general course.

Evolution of Horticultural Plants—A study of modifications of plants under culture.

Principles of Plant Growing—Preparation of soils, potting, watering, etc.

Commercial Crops—Growing of plants and cutflowers for market.

Decorative and Bedding Plants—A study of tender plants for greenhouse and out-of-door decoration.

Garden Flowers—Growing of annuals, herbaceous perennials and shrubs.

Floral Decorations—Use of plants and cutflowers in designs, baskets, decorations, etc.

cultural subjects the following general subjects are also required:

Principles of fruit growing, seeds, soil physics and management, soil fertility, fertilizers and rotations; plant histology and physiology, plant morphology, plant pathology, entomology, chemistry, zoology, wood shop practice, economics, English literature, rhetoric, thrommatology, military science, physical training.

While all the floricultural subjects have been primarily designed to be units in a course in floriculture, any of them may be taken by students in the university provided they have the necessary qualifications to admit them to the classes.

For further information regarding the course, a catalogue may be secured by addressing the undersigned or the Dean of Agricultural College at Urbana, Ill.

H. B. DORNER.

VISIT OF RHENISH NURSERYMEN TO TREVES.

In connection with the recent congress of Rhenish nursery proprietors at Treves (Trier) the members of the Handelsgartnerverbandes (Unions of nurserymen) of the Miedlerhein and Rhein-Mosel made an excursion to that town on July 31, last. The members had received invitations from the following firms at Treves to inspect their establishments, viz: P. Lambert, J. Lambert & Sons, Lambert & Reiter, J. Reiter & Sons, Miller, Langsur and others. For the reasons that the town occupies a wonderful position on the Mosel, has fine vineyards round about, and remarkable nurseries in its vicinity, and not least, its buildings from the times of the Romans (the Porta-nigra, amphitheatre, imperial palace, baths, etc.) it is a place much visited by strangers; and one in which those who are not temperance advocates can enjoy a drop of excellent Mosel wine, and refresh themselves, when money plays no role, with delicious Berncastler Doctor, and Frau Doctor Tanisch's Ansiesi, it was not a matter for wonder that the invitation was gleefully accepted by members from far distant places.—M. H. in Die Gartenwelt, July 31

AMERICAN ASSOCIATION OF PARK SUPERINTENDENTS.

The eleventh annual convention opened in Seattle, Wash., on August 9, for a three days' session. The mornings were devoted to business and the afternoons to visits to the many beautiful parks and the Exposition grounds. Officers for 1910 were elected as follows: President, W. S. Manning, Baltimore; vice-presidents, G. A. Parker, Hartford, Conn., E. T. Mische, Portland, Ore., J. G. Morley, Los Angeles, M. H. West, Chicago, W. J. Zartman, Brooklyn; secretary-treasurer, F. G. Mulford. Harrisburg was chosen for the convention of 1910.

New Haven, Conn.—The New Haven Nurseries is the firm name assumed by A. T. Osterman and L. A. Soldar, who are just starting in the nursery business at 123 Church street.

SOCIETY OF AMERICAN FLORISTS AND ORNAMENTAL HORTICULTURISTS

Return to Cincinnati for the Twenty-Fifth Convention—Extensive and Varied Trade Exhibits

Rochester, N. Y., the Next Meeting Place

Officers Elected

PRESIDENT—F. R. PIERSON, Tarrytown-on-the-Hudson, N. Y.

VICE-PRESIDENT—F. W. VICK, Rochester, N. Y.

SECRETARY—H. B. DORNER, Urbana, Ill.

TREASURER—H. B. BEATTY, Pittsburg, Pa.

The twenty-fifth convention proceedings opened according to program with an organ concert in Odeon Hall, at 1.30 p. m., Tuesday. President Valentine then read his address, there being on the platform Ex-Presidents Hill, Graham, Smith, O'Mara, Burton, Stewart and Traendly, and the present officers of the society.

PRESIDENT'S ADDRESS.

I take great pleasure in addressing you at this twenty-fifth meeting of the society and I am able to assure you that the past year has shown an increase in membership and that our financial condition is also stronger than a year ago.

Societies, like human beings, suffer the greatest mortality in infancy, so that on its twenty-fifth birthday this society may be congratulated on having passed its period of greatest peril and to be reasonably certain of reaching a good old age.

But, fullness of years is not necessarily an evidence of usefulness and we must take care that youthful complacency does not make us forget that we have the only charter ever granted to a similar organization by these United States and that such distinction carries with it unusual responsibilities. We should, therefore, take heed to our conduct so that the work entrusted to us by Congress shall be well and faithfully performed on the broad lines contemplated by our charter. The next twenty-five years must show a record of work accomplished upon ever broadening lines if we are to uphold the traditions of the old guard who started this work a quarter of a century ago. I had hoped that we would at this meeting have the encouragement and the prophetic voice of our first President but instead we are called upon to pay tribute to his memory. I shall leave to others better equipped the task of doing honor to those we have lost, but if this society can become imbued with the enthusiasm and the optimism of John Thorpe, no work can be too great for it to undertake with reasonable hope of success. If a knowledge of the things done here can penetrate to the

Great Beyond the thought that his efforts were bearing fruit in a wider usefulness for this society would bring great happiness to the soul of that remarkable man.

Membership.

A few members of this society have been continuously faithful to it since its organization and have never failed to send their dues to the Secretary. It seems eminently fitting that some special recognition should be made of their many years of loyal support and I suggest that their names be carried in the annual report during their lives under the heading of "Pioneers" and that no further annual dues shall be collected from them.

The present membership of our society does not include more than ten per cent of the commercial men who are owners and operators of some kind of a floral establishment and this indicates that something has been wrong somewhere. We have either not followed the right method in canvassing for new members or the conduct of the society has not been such as to interest outsiders and bring them into the fold.

Our membership is especially weak among the retail florists and we have few members in the South or on the Pacific Coast. It is well worth while to consider whether there is not some more effectual way of canvassing for new members in those states and we should try to devise some means of interesting the owners of retail flower stores so that they will find something in our society and at our conventions of especial interest and benefit to them.

There are thousands of these retailers in the country and their most crying need at present is some form of organization whereby they can, with confidence, exchange orders by mail or telegraph. If some such organization could be effected confining its membership to the members of this society I believe the retailers would flock to our standard in large numbers.

Convention Work Divided Into Sections.

The members of this society are engaged in so many different lines of

work that it is hard to arrange a program which will hold the interest of a large proportion of its members. We claim to hold the door open for the admission of all persons interested in horticulture and to manufacturers of and dealers in horticultural supplies, but having come in through our open door many fail to find anything of personal interest within our home and so allow their membership to lapse. The manufacturer or the dealer may join and attend as a matter of policy but he cannot be expected to take any great personal interest in the life history of Aphis or in the Mendelian Theory; nor can the man who devotes his whole place to growing cut flowers be presumed to take a keen interest in landscape gardening.

While our membership is very much smaller than it ought to be, and than we hope it will be, it is now large enough so that the work of the convention could be successfully divided into sections, as is done in many societies. One section might take up matters of interest to all importers of bulbs and plants, another section, as I have already indicated, might profitably be devoted to the interests of the retailers.

We might have a section devoted to the interests of the private gardeners and ornamental horticulturists and so justify that portion of our name. If the organizing and conducting of such a section should prove to be of interest to any considerable number of private gardeners and park men, we would get an accession of valuable members from a direction where we have heretofore awakened but little interest.

In pursuance of such a policy, section programs would be prepared of especial interest to those engaged in some particular branch of work. These different sections would hold their meetings in different rooms and no one would be obliged to listen to a class of papers that did not interest him, neither would an interesting discussion have to be abridged to prevent its taking the time set down on the program for a topic of a different nature.

A number of the members of this

society have been interested in cross-fertilizing. Ten or a dozen men devoted to that class of work could get into a small room and hold a very interesting session. Perhaps a half dozen similar meetings might be in session at one time in different rooms and it would be necessary to devote to them at least one day of the convention so that on that day no general business session would be held. These sessions being composed of a much smaller number of men than the large convention would be less formally conducted. Expressions of opinion would be much more frank and men too diffident to speak in a large convention would gladly take part in the proceedings. The most valuable points we get at these conventions are often obtained in the informal talks in hotel lobbies or in private rooms and there are very few who fail to pick up something of interest and value on such occasions.

The retailers' section would receive the reports of the officers of the delivery association and its arbitration committee would adjust controversies. They would discuss the best methods of drawing and holding trade; the best methods of bookkeeping and of collecting accounts; protection against "Dead Beats"; claims for commission put forward by mercenary servants; the adoption of uniform charges for the rental of decorative plants; the proper policy to pursue toward churches and societies asking for donations. All these and many other subjects would furnish fruitful topics for discussion. So many and such substantial benefits would be offered that the retailers simply could not afford to stay out.

The resultant gathering together of retailers would induce larger and more profitable displays by those concerns who cater to that trade.

These are possible means for strengthening and upbuilding our society among the classes at present included in our membership and I recommend them to your careful consideration. It is my firm conviction that if some such plan as this had been followed, we would have had a Rose Section, a Carnation Section and a Chrysanthemum Section instead of separate societies which are doing commendable work but are to some extent depleting our ranks.

Encourage Organization of Amateur Societies.

We must admit that in the past this society has been conducted as a trade organization, without any pretense of occupying that broader and larger field which includes the flower-loving public.

It is not my intention to criticize that attitude, for it may have been the only one which would have carried the society safely through the perils which beset it; but the time has surely come when we should assume that high place in horticultural councils to which our national charter entitles us.

The amateur will never find much of interest in a convention of florists and I do not assume that any merging of the two elements into one convention would be acceptable to either; but our interests should induce us to systematically encourage the organizing of amateur societies, meeting in annual convention on the delegate plan, under the encouragement of the S. A. F. and

O. H. until such time as the amateurs preferred to release the helping hand and walk alone. Our Secretary ought to have the time and the means at his disposal so that he could help actively in promoting and organizing such societies. The National Council of Horticulture, which is partly maintained from the treasury of this society, does great good through the publication of articles of a horticultural character intended to meet the needs of amateurs. This same organization could do much to stimulate the growth of such an association of amateur flower growers.

It would be impossible to calculate the increased demand for our products as the result of such an organization if it could be made to catch the popular fancy. The greatest good resulting from such a movement, however, would be the adorning of places now barren and the stimulating of the love for Nature's beauties among the people of this great land of ours.

Countless small societies and clubs are but waiting the heat of enthusiasm to fuse them into a mighty force which shall remove the ugly scars from our landscape and convert thousands of dreary towns into the abiding places of beauty. Shall we be faint-hearted and say this is too much to accomplish, or shall we say that the fulfillment of this noble purpose is both our duty and our rightful prerogative?

I recommend the appointment of a committee with authority to take up this work in a preliminary way and report progress at our next convention.

Change in By-Laws.

The business affairs of a society like ours are varied in character and the proper handling of them calls for energy, experience and good judgment. The man upon whom the chief responsibility rests in these matters is the Secretary of the society. In the past you have been exceedingly fortunate in the men who have been selected for this important work and I, therefore, feel perfectly free to express my opinion, since none can consider it as personal criticism. I am firmly of the opinion that the convention of this society should not elect its Secretary, but should leave that important duty to be undertaken by the board of directors, who will closely scrutinize the qualifications of such men as seem available and will select the man they think best suited for the position. In the privacy of the board room such matters can be fully discussed, whereas such a discussion on the floor of the convention would be unwise. Large business concerns do not allow their stockholders to elect the active head of the concern, but that important matter is settled in directors' meeting.

Under our present arrangement each convention brings the peril that some popular but incompetent man will be boosted into this office on a temporary wave of enthusiasm. Any man who has held the office of President of this society will gladly testify how much he has been compelled to turn to the Secretary for guidance and how completely the welfare of the society is in his keeping.

What I have said concerning the election of Secretary applies also, but with less force, to the election of a Treasurer. In my judgment the busi-

ness conduct of the society should be under the control of the board of directors. I, therefore, recommend such a change in our by-laws as will provide for the convention electing two directors each year for a term of three years, instead of their appointment by the President, as at present, and for the election of the Secretary and Treasurer by the board of directors, subject to removal at their discretion.

If our Society is to expand its field of usefulness or properly cultivate the field it now occupies, it must be able to secure the entire time of a capable man as Secretary. The year would be all too short in which to do the many helpful things such a man would find to do in visiting and encouraging local clubs, both professional and amateur. In addressing meetings in villages where it was desired to awaken an interest in horticulture, our present Secretary has been able to do some good for the cause, but under our present plan the time devoted to such things must be taken at the expense of private interests.

It is a conscientious conception of the work that a secretary ought to do which has forced our present efficient officer to decide that he must not continue in the work, in justice to his own interests and the interests of his business associates.

The undertaking of ambitious projects with hope of success necessitates expenditures. This society ought to be in a position to spend money for the things which would ultimately profit its members and promote the objects for which it is conducted. At present our income is too limited to permit of anything but the most necessary expenditures.

It is lamentable that a society of a thousand florists banded together cannot collectively spend money for desirable ends when it has hundreds of men within its ranks who would not hesitate to individually incur the expense in their own interest. Whether some means cannot successfully be devised for very largely increasing the funds at the disposal of the society is a subject which should have the careful attention of an energetic and able committee.

National Flower Show.

The most important incident since our last convention was the National Flower Show held under the auspices of this and kindred societies in Chicago last November. What was accomplished will be reported to you at this meeting by the Chairman of the Executive Committee.

Another committee has been appointed to take up the matter of a similar show in some Eastern city and will also report to you at this meeting.

It is very encouraging to know that the Chicago Show was held with profit to the guarantors and to this society for that fact alone makes the success of future shows more probable.

New Opportunities.

Many articles, notably azaleas, bulbs and palms, are imported into this country in immense numbers, and the impression is general that a large part of these importations might be profitably grown in the United States. In order to judge as to the merit of such an enterprise, the fullest and

most detailed knowledge of foreign methods is desirable. It seems likely that if this society made application to the Secretary of Agriculture, that official would order an investigation and would secure and furnish to us all the data obtainable. I recommend that our Secretary be instructed to ask for this information in the name of this Society.

The work of committees is often made harder because it is the custom to make them consist of three or more members and to have the members hail from different sections. My judgment is that for many purposes only one man should be appointed on a committee, except such committees as are expected to do their work during the time of the convention. Have it thoroughly understood that the committeeman can temporarily call to his assistance any other member or number of members, but that wherever he goes he is the committee and does not need to await the action of any other member.

The Secretary of the society and the President ought to be kept advised of the progress being made by all committees. When it can be done without interference with the work of the committee, such progress should be reported to the trade press by the Secretary.

The florists of Illinois have succeeded in getting substantial recognition from the legislature with an appropriation that permits the maintenance of a florists department of the State Experiment Station. A like result could doubtless be obtained in other states if the florists here worked for it as energetically as did the florists of Illinois.

Our retiring Secretary, Mr. Rudd, has taken a keen personal interest in this movement and I suggest that if he were made a committee of one to follow up this work the trade at large might be induced to pull together for greater recognition of their needs and their strength with great resulting benefits to florists generally.

Sports.

The matter of Sports at our conventions has been referred to by many of my predecessors. I am firmly of the opinion that any clean, healthful sport is a good thing for any man who gives the most of his time to work. Bowling and shooting contests have enough of an attraction so that they often turn the scale and bring to the convention some men who otherwise would not attend. Local bowling clubs do much to bring the florists of a community together and in the enjoyment of contests of skill, petty quarrels are forgotten so that a friendly feeling generally exists among those attending.

The time has gone by, if it ever was, when a man must be a rowdy in order to enjoy or participate in a trial of physical skill. These matters must be kept in their proper place and not be allowed to interfere with or overshadow the convention itself; but as at present conducted, I look upon them as both useful and desirable.

There is much in this address which is not new, but has been urged by my predecessors. I offer no apology for again pressing these things upon you, but if you will take the time to re-

view our annual reports you will find many useful suggestions that have been brought forward by other Presidents and which would make this address too long if I were to review them here.

Before closing I wish to assure the members of this society that not myself alone, but the florists of Colorado, also, keenly appreciate the recognition you have given them by the selection of one of their number to preside over this Convention. At the close of our last Convention, Colorado had seven names enrolled as members of the society and seldom more than one or two have been in attendance at the Convention. At the present time Colorado has over forty members enrolled and are here today.

That her thanks have taken this substantial form is largely due to the untiring energy of N. A. Benson, State Vice-President.

SECRETARY'S REPORT.

Secretary Rudd then presented his annual report:

Starting out with bad conditions and dismal prospects financially, greatly increased general interest in the Society since the first of January and the consequent large accessions of new members and re-instatement of old ones in default, have converted what looked almost sure to be a year of stationary or backward conditions into a decidedly successful one.

From the financial point of view the convention at Niagara Falls was a decided failure. Many causes led to this. Of course the general business depression through which we had passed had a strong effect, and it is doubtful whether a very successful convention could have been held last year at any place. The writer believes, however, that it is a serious mistake to hold conventions of this society in any location where there are not large trade interests. In the first place, we lose the enthusiastic work of a good strong body of local florists. The difference between conditions in this respect at Niagara Falls and what they are here, will, I am sure, be noticed by every member who attended both conventions. In addition to that loss, which is so great that it can hardly be overestimated, we have the lack of drawing power to our members. The bulk of the florists in this country are not wealthy men, but they are shrewd, prudent business men, and the trip to the convention for them must be shown advantageous to the highest degree in a business way; and unless they can have added to the pleasures and the advantages of the convention proper, a chance to examine and inspect greenhouse establishments, successful retail flower shops, wholesale establishments and other like supplementary things which they all consider of great value to them in a business way, many will not feel justified in giving the time and going to the expense of a trip to the convention. In short, many of our members do not care enough for scenery to pay much money for it, and it seems to your secretary that never again, unless conditions are exceptional, should this society go to outlying cities like Niagara Falls or Asheville. At Niagara Falls we only received 50 new members, while the writer will be disappointed if

we do not add 250 to our membership roll at this place. Fortunately the National Flower Show was an event which attracted great interest (in fact I think by it we lost the attendance of a good many people at the Niagara Falls Convention) and we were, during the progress of the show, enabled to take in nearly as many new members as at Niagara Falls.

The financial statements attached to this report, as well as the treasurer's report, will show a gratifying increase in the General Fund and an unusually good increase in the Permanent Fund. The custom of adding all interest received on both funds to the permanent fund has been continued and the latter fund has now reached so large an amount that the interest on it is quite an item. Steps are being taken to make permanent investments of this fund which will secure larger interest returns than are obtained at present. Starting out 25 years ago with no pattern to follow excepting foreign horticultural societies which were organized to fit different conditions, our society has had to try many experiments and abandon many of them. We are now just beginning to get our bearings and to see clearly the work which lies before us. Personally the writer believes that we shall never really and truly come to our own, except through the nursing into a rapid growth of our permanent fund. The society will never be what it should be and can never accomplish what it should accomplish for the floricultural interests, until it has a permanent home of its own with ample glass structures for the testing of new varieties and for the growing and maintaining in the best condition of a large and representative collection of subjects adaptable to American conditions. This is going to take an enormous amount of money and we must not be impatient and attempt to start this sort of work until the funds at our disposal are sufficient to make a reasonably good beginning. At that time the writer hopes that the strength and influence of the society will be so great that the national government can be induced to assist directly in the work.

There are three sources aside from government assistance to which we can look for strengthening our permanent fund. First, of course, in fact the only one which has up to date been of much effect, has been the life memberships and the compounding of the interest, which has been steadily going on.

Second is the trade exhibition which has grand possibilities but which we seem to have largely overlooked heretofore. The present method of taking the entire trade exhibition matter directly into the hands of the society itself, is a move in the right direction and I believe will show excellent results this year. The charges for space have been experimentally fixed very low. The writer is convinced they are altogether too low and that, unlike the tariff, they should be revised upwards. Careful handling of this matter, your secretary is convinced, will very shortly produce an income greater than your entire present revenue, both general fund and permanent.

The third source of income is one that has never been exploited, so far as I know, namely, bequests and donations. In the 25 years of the exist-

ence of our society, no money has been left to it by will and no gift has been made which could be added to the permanent fund and which would in any way assist us to arrive at the permanent home. It seems to your secretary that we have been sadly neglectful in this respect and that a proper placing before our members of the vast good to be accomplished by such bequests, would soon produce results.

Of course we must continue to use every effort to increase our membership in the way of annual members, because our ability to carry on our present work depends largely on the income from that source. However, too much stress has been placed on the getting of new members, or perhaps it would be better to say that not enough stress has been placed on the necessity of keeping the members we have. We must at all times carefully consider and carry out every possible means of retaining the interest of the members we already have. The man who deliberately sends in his application in the middle of the year because a study of the conditions has led him to believe that membership in the society will be valuable to him, is a continuing source of gain, because he will stick, if the handling of the society work is such as not to disappoint him in his expectations. The man who joins under the excitement of the convention or through the strong solicitation in a personal way of officers or members, is often worth just \$5 and no more. His interest is only a fleeting one and if he does not attend the next convention he fails to renew his membership and drops out. In the past we have been neglectful in the matter of getting into close and continuous touch with our individual members; we have not shown them that this is Their society and that the whole strength of the society is at their disposal at all times to every reasonable degree. They should be encouraged to submit their problems to the secretary and should be led to expect, and should be given, prompt help. Many of the inquiries coming in relating to the difficulties of our members, especially the ones just starting in business, can be readily attended to by the secretary, while for those questions of a more serious nature, we have hundreds of able men in the society who will, I am sure, be glad to help solve the problems of their brother members.

The writer has for many years been much interested in the matter of Experiment Station work and has believed that the florists were not getting their dues, largely because they failed to appreciate the importance of the work and to ask for what they wanted. The work of the experiment stations in comparatively a few years, has revolutionized farming, dairying, live stock breeding and fruit culture. It has done nothing for us, comparatively speaking. The work at Illinois being a combination of the best scientific skill, with the close scrutiny and advice of members of the trade, is going to be of enormous value and the writer believes that the same conditions can be brought about in nearly every state in the Union. In order to lay before you the facts, your secretary some time since took up correspondence with the experiment stations

in the country, hoping to be able to tabulate the facilities at the various stations and the work they were doing and to urge upon you an active campaign for securing better things. Unfortunately the correspondence has dragged out and the information has come in so slowly that the data cannot be given to you at this time. I hope to complete it, however, and ask your permission to publish it in the forthcoming volume. The results will be so disappointing to everyone that I hope it will arouse us all to the necessity of promoting an organization in each state to secure better things and also to appoint a central committee of the society to advise with and to aid the different state organizations.

MEDALS.

Medals have been delivered during the past year as follows:

SILVER MEDAL—Henry A. Dreer (Incorporated), for *Nephrolepis Scholzei*, offered through the St. Louis Horticultural Society and awarded at their annual exhibition, November, 1908.

National Flower Show Medals.

The medals listed below were awarded at the National Flower Show, Chicago, November, 1908.

SILVER GILT MEDALS.

Elmer D. Smith & Co. For display of cut chrysanthemums.

Julius Roehrs Co. For three *Heliconias*. Halfdan Skjoldager. For private gardener winning most premiums.

SILVER MEDALS.

Thomas Proctor. For private gardener winning second number premiums.

W. A. Manda. Four Medals: (1) For collection of orchid blooms; (2) For *Kentia Mandarina*; (3) For *Dracaena Black Beauty* Improved; (4) For *Polypodium Mandalaianum*. E. Oechslein. For collection of greenhouse plants.

Vaughan's Seed Store. For educational exhibit of outdoor planting.

Martin A. Ryerson. For chrysanthemum plant.

W. J. Smyth. For vase of roses. M. Calvat. For seedling chrysanthemums.

Harry Turner. For *celosia* *Pride of Castle Gould*.

C. H. Totty. "Sweepstakes," best six blooms chrysanthemums.

BRONZE MEDALS.

W. A. Manda. For *Manda's Golden Privet*.

Henry Eichholz. For carnation *Alvina*. J. A. Peterson. For *Begonia Agatha*.

E. G. Uiblein. Two Medals: (1) For one cattleya; (2) For one orchid plant.

John Riordan. For private gardener winning third number premiums.

Thomas Roland. For cyclamen plants. J. J. Mitchell. For best flowering plant.

Carnation Medals.

Offered through the American Carnation Society and awarded at their annual meeting in Indianapolis, January, 1909.

SILVER MEDAL—The F. Dörner & Sons Co., for carnation *Hoosier Lad*.

BRONZE MEDAL—A. C. Brown, for carnation *Superba*.

Various Awards.

The following awards were made at the National Flower Show, Chicago, November, 1908.

CERTIFICATES OF MERIT.

W. A. Manda. Three certificates: (1) *Dracaena Mandarina*; (2) *Anthurium Cuttingianum*; (3) *Yucca Menandii*.

F. R. Pierson Co. Two certificates: (1) *Nephrolepis Elegantissima compacta*; (2) *Nephrolepis superbissima*.

Julius Roehrs Co. Croton *Fred Sander*. The Lincoln Park Commissioners. Group of greenhouse plants.

Henry A. Dreer (Incorporated). *Nephrolepis Scholzei*.

The South Park Commissioners. Group of greenhouse plants.

W. N. Rudd. Carnation *Mrs. J. C. Vaughan*.

F. Dörner & Sons Co. Carnation *Pink Delight*.

HONORABLE MENTION.

Sam Wolniewicz. *Glebe*. 58 plants.

Plant Registration.

New plant names have been registered since last report as follows:

No. 398—August 15, 1908. Rose, *American Pillar*, by the Conard & Jones Company, West Grove, Pa.

No. 399—August 15, 1908. Canna, *Gladio-flora*, by the Conard & Jones Company, West Grove, Pa.

No. 400—August 15, 1908. Canna, *Minnehaha*, by the Conard & Jones Company, West Grove, Pa.

No. 401—August 15, 1908. Canna, *Rosea Gigantea*, by the Conard & Jones Company, West Grove, Pa.

No. 402—December 1, 1908. Chrysanthemum, *President Taft*, by Elmer D. Smith & Co., Adrian, Mich.

No. 403—December 23, 1908. Canna, *Wawa*, by the Conard & Jones Company, West Grove, Pa.

No. 404—December 23, 1908. Canna, *Mont Blanc Improved*, by the Conard & Jones Company, West Grove, Pa.

No. 405—December 23, 1908. Rose, *Climbing Mosella*, by the Conard & Jones Company, West Grove, Pa.

No. 406—January 25, 1909. *Cypripedium*, *Ursula*, by Alfred J. Loveless, Lenox, Mass.

No. 407—February 5, 1909. *Cattleya*, *Oakland*, by Charles G. Roebling, Trenton, N. J.

No. 408—February 5, 1909. *Laelio-Cattleya*, *Magenta*, by Charles G. Roebling, Trenton, N. J.

No. 409—February 27, 1909. Carnation, *Edward*, by W. H. Shumway, Berlin, Conn.

No. 410—March 19, 1909. *Clematis*, *Clematis paniculata rubra*, by the Jackson & Perkins Company, Newark, N. Y.

No. 411—April 2, 1909. *Begonia*, *President Taft*, by J. A. Peterson, Westwood, Cincinnati, Ohio.

No. 412—April 23, 1909. *Hydrangea cinerea sterilis*, by E. Y. Teas, Centerville, Ind.

No. 413—July 16, 1909. Rose, *Climbing American Beauty*, by Hoopes, Bro. & Thomas Company, West Chester, Pa.

Members Lost by Death.

Since the last report six members have died:

1909.

February 6, W. C. Krick, Brooklyn, N. Y.

March 2, E. V. Hallock. (Life member) Queens, N. Y.

April 3, William Hagemann, New York.

April 19, John Scott, Brooklyn, N. Y.

May 28, John E. Andre, Doylestown, Pa.

July 9, Herbert Heller, New Castle, Ind.

Death of John Thorpe.

On July 1, 1909 occurred the death of John Thorpe, the first president of this society.

Membership Statement July 31, 1909.

Total annual members as per last report, November 20, 1908	720
Reinstated	19
New members	71
	<hr/>
Deceased	5
	<hr/>

	<hr/>
Deceased	1
	<hr/>
Total life members enrolled	195
Total members enrolled...	1000
Gain in life membership since July 31, 1908	25
Gain in annual membership since July 31, 1908	56
Total gain	81

Note:—Since August 1st and up to August 12th, we have received 8 new life members and 24 annual members. Last year we had 9 annual and one life, making the net increase August 11th, 103 members.

Transportation.

Every effort was made to secure reduced railroad rates, but without success. The various traffic associations seem to have generally adopted the policy of refusing reduced rates except where there is a guaranteed attendance of one thousand or more. The writer thinks this policy is a part of the general campaign against the two-cent-per-mile legislation. Anyway, we didn't get the rates.

State Vice-Presidents.

The state vice-presidents have during the past year been very active in the interests of the society and have done much good work. The complaint which your secretary was compelled to make last year regarding the laxness among them and failure even to pay their own dues on the part of a few, does not hold this year and a large part of the advance shown is due to their good work.

Trade Press.

The trade press have continued their cordial support of the society as in the past.

In closing this the last report of this kind which the writer will ever make to you, I wish to tender my most heartfelt thanks to all the friends who have by advice and assistance freely given and by kind words so often spoken, lightened the task and made the work a constant pleasure.

I cannot make you know how much enjoyment there has been to me in getting back into the harness and being actively identified again with all of you good kind hearts and this great organization of ours. It is with regret that I step out. I assure you that I will set your house in order and will turn over to my successor in good and perfect condition all of your books and records and other property now in

SECRETARY'S SUPPLEMENTAL FINANCIAL REPORT.

January 1, 1909, to August 1, 1909.

RECEIPTS.

General Fund.

Dues of 1908	\$ 57.00	
" " 1909	1,347.00	
" " 1910	3.00	
Total Dues		\$1,407.00
Fees and Dues, new members		355.00
Total from members		\$1,762.00
Balance from Trade Exhibition 1908..	\$ 63.36	
Miscellaneous	1.25	\$ 64.61
Total General Fund Receipts		\$1,826.61

PERMANENT FUND.

Fees, Life Members	\$ 425.00
Total receipts	\$2,261.61

EXPENDED.

Paid Treasurer	\$2,251.61
----------------------	------------

Considering current receipts only, the above is a gain of 14% over the corresponding period last year.

NOTE: Since the above report was written, that is up to and including August 11th, there has been about \$1000 more collected, including \$483.17, this Society's share of the proceeds of the National Flower Show.

my hands. I shall aid him in the exacting task before him to the best of my ability, and beg to assure the society that I shall always stand ready to accept any tasks they may give me to do and shall always remain a true and loyal member, ready to support the best interests of the society and equally ready to fight against any unwise moves.

Statement of Warrants Drawn on Treasurer for Payment from the General Fund, January 1 to July 31 Inclusive, 1909.

1908 Account.

Annual Report and mailing	\$410.51
Officer's Bond	8.00

Miscellaneous	9.75
	<hr/>
	\$1,752.51

\$2,401.09

Less Hall Rent...

530.00

\$1,871.09

NOTE: It should be noted that the item of Hall Rent is one that has never appeared in the treasurer's account before. Under the new system lately

adopted exhibition bills are paid by the treasurer and receipts are turned over to the Society, so that this item will take care of itself later on.

Deducting the hall rent makes the expenditures for the period in question \$1,871.08, about \$50 more than the collections for that period. However, the heavy collections for the first few days in August will bring the balance of the General Fund receipts much in excess of the payments made, and we have to add to this balance the collections being made here at the convention, which will undoubtedly be very heavy, and also the proceeds from the Trade Exhibition, which will apparently greatly exceed those of any previous exhibition by reason of the large amount of space sold and the economical management. It seems certain that we will close the present fiscal year with a substantial increase in the amount of our General Fund and also a heavy increase in the Permanent Fund.

On request of Treasurer Beatty, who was suffering from sore throat, Mr. Rudd then read the financial report.

	\$10,000.00

The reports of the state vice-presidents were referred to a committee consisting of Messrs. E. S. Cushman, E. Weinhoeber and J. S. Wilson. The proceedings at the last annual meeting of the Executive Board were then read in full by Secretary Rudd and all the recommendations made therein to the society were accepted and approved excepting that clause appropriating one hundred and fifty dollars for the Council of Horticulture which, on motion of W. J. Stewart, was laid over for further consideration. Chairman Hammond then presented the report of the Legislative Committee showing that through the well directed work of F. R. Pierson the florists' interests in the new tariff bill recently adopted by Congress had been cared for and a specific duty satisfactory to the committee had been secured. The complaints of several members in regard to express charges for ice and returned empties had been investigated but the facts ascertained had not been strong enough to warrant bringing them before the Interstate Commerce Commission. Mr. Hammond's report was very complete and showed faithful work on the part of the committee and a vote of thanks was accorded.

A letter was presented from the American Seed Trade Association asking for the appointment of a joint committee on matters of mutual concern. An invitation from the Montreal Gardeners' and Florists' Club to hold the next meeting in their city was read. A communication from O. W. D'Alcorn, calling attention to successful bulb culture in Virginia, was also read. Mr. O'Mara presented a resolution endorsing Congressman Bennett's congressional bill for establishment of a domestic parcel post, but it failed to pass.

The evening was pleasantly passed at the Zoo, in Eden Park, where there was a band concert followed by the president's reception on the cafe veranda, and a brilliant display of fireworks, among which were some set pieces especially designed to represent florists' subjects.

THE EXHIBITION.

The exhibition was, as promised, unprecedented in extent and variety. The entire two floors of the vast Music Hall were occupied, and the view from the main entrance was an inspiring one. There were great pyramids of gladioli, long ranks of ferns, crotons, palms, bay trees, all superb specimens, and beyond them models of greenhouses, boilers, engines and apparatus and equipments in great variety. The display of plain and fancy pottery was magnificent and the bulb dealers came out very strong with their wares. Upstairs the supply dealers held forth with an exhibition of unprecedented extent and beauty, far exceeding anything ever before attempted in this country. The number of patent devices and mechanical improvements shown was unusually large. We shall present a more complete review later on.

WEDNESDAY MORNING.

Selection of Next Meeting Place— Nomination of Officers.

Professor J. B. Norton was the first speaker on the program for the morn-

ing session. His lecture was very instructive to those interested in the modern theory and practice of plant breeding. On its conclusion a vote of thanks was accorded him. The audience room then rapidly filled up in anticipation of the struggle over the selection of a place for the next meeting and the nomination of officers. The claims of Rochester, N. Y., and Montreal, Canada, were eloquently presented by the spokesmen, Messrs. Hart, Vick, Plumb and others for Rochester, and Gammage and Robinson for Montreal. The result of the ballot was not announced till the afternoon session, when the selection of Rochester by a large majority was proclaimed. J. F. Cowell, presented the name of F. R. Pierson for president, paying a well-deserved tribute to Mr. Pierson's valuable services to American horticulture in securing favorable tariff rates at Washington. Messrs. Gude, Vesey and O'Mara seconded the nomination, which was the only one, and insured unanimous election on the morrow for Mr. Pierson. F. W. Vick received a similar nomination for vice-president. P. O'Mara presented the name of Harry Bunyard for secretary, W. R. Smith nominated Edwin Lonsdale, and E. G. Gillett nominated H. B. Dörner. Col. Castle presented the name of H. B. Beatty for treasurer. Judge Vesey nominated Adam Graham, but that gentleman declined most emphatically.

WEDNESDAY AFTERNOON.

Report of Judges.

At the afternoon session the report of the judges was presented. The awards were as follows: Class A. Certificate of merit and silver medal, to H. A. Dreer for *Nephrolepis Scholzei*, and J. A. Peterson for *Dracena Victoria*. Certificate of merit to Thomas Jackson for yellow *Alternanthera*. Honorable mention to A. C. Brown for carnation Sangamo; to F. R. Pierson for *Nephrolepis Elegantissima*. Highly commended to J. McCullough & Sons for rose President Taft. Class B. Honorable mention to E. E. Stewart for four new gladioli. Class C. Certificate of merit to W. W. Castle Co. for automatic circulator. Honorable mention to Kroeschell Bros. Co. for piping system and pipe wrench. Highly commended to Herendeen Mfg. Co. for improved devices on Furman boiler. Class D. Certificate of merit to King Construction Co. for iron frame greenhouse. Honorable mention to D. William Moll for ideal pipe clamp and E. H. Hunt for Delwood ware. Highly commended to King Construction Co. for curved iron eaves and improved pipe hangers. Class E. Honorable mention to M. Rice & Co. for Etruscan gold finish baskets; Schloss Bros. for new ribbons and cords; Wertheimer Bros. for waterproof chiffon, etc.; Reed and Keller for cycas leaf holders, Florentine bronzed baskets, vases, pedestals and brass devices. Class F. Certificate to Hubert Bulb Co. for American grown bulbs. Class G. Honorable mention to Wilson Plant Oil and Fertilizer Co. for pot washer and tub carrier; H. F. Michell Co. for new hose mender; Adam Heim & Son for self tying rose stakes. Highly commended to J. McCullough & Sons for Paragon sprayer; H. F. Michell Co. for lamp for burning nikoteen.

NATIONAL FLOWER SHOW.

The next topic was the National Flower Show. J. C. Vaughan and W. F. Kasting rehearsed some of the features and details of management of the first show at Chicago, giving good advice as to what should be done in preparation for the next one. F. R. Pierson reported for the show committee that of the eastern cities available for a spring show, Boston was the only one having a suitable hall and recommended that Boston be selected as the location and that the last week in March, 1911, be the date. It was advised that work on the schedule be at once begun and that a guarantee fund of not less than \$10,000 be raised. Twenty-two gentlemen immediately responded with subscriptions of \$100 each. The selection of Boston was jubilantly approved by W. A. Manda and others, and after a number of very sanguine speeches the committee was instructed to go ahead to perfect full plans of operation.

Report of Committee.

The committee appointed by President Valentine to consider the time and place for holding the next National Flower Show have canvassed the matter thoroughly. The understanding of the committee was that it was generally understood that the next National Flower Show should be held in the East. This being so, the committee assumed that it was left to them to determine in what eastern city the show should be held, although it might be questioned whether the financial outcome from such an enterprise in an eastern city would be as great as in Chicago.

In the selection of possible cities, the choice was finally limited to New York, Boston and Philadelphia. Many thought that the show should be held in New York, and it would have given the members of the committee from New York great pleasure to have selected New York; but, unfortunately, the only building in New York large enough and suitable for the purpose, Madison Square Garden, is engaged at the only time in the spring when it is feasible to hold a spring flower show—the end of March or beginning of April—this building having been engaged for years at this time of the year. The committee could have obtained a splendid building in New York City—the Museum of Natural History—in which the American Rose Society will hold its next exhibition. This is one of the finest buildings in the City of New York, in fact, in the country; but as this building belongs to the city, it would be impossible to charge an admission fee, and without such revenue it would be impossible to provide for a premium list or to defray other expenses incident to a flower show. Therefore, this building could not be considered, although it was available. The committee then went into the question of erecting a temporary building for the purpose. This was discussed at length, but the erection of a building was not thought practicable, because it would have to be heated at the time of the year when the flower show is to be held, which would add so much to the expense as to make it prohibitive.

The committee understood that the general sentiment has been in favor

of holding the show in the spring, at a time that will permit the exploiting and exhibiting many plants with which the public are not familiar and which will lend an added interest and charm to a show of such a national character. For this reason, the committee considered the question from the standpoint of holding the show in the spring, at which time, on account of not being able to obtain a suitable building, it will be impossible to have the show in New York City. It is possible a suitable building could be secured in the fall, but the committee believed it to be desirable to hold a spring flower show.

After considering the desirability of Boston, Philadelphia and New York, Boston was finally selected as the most desirable city in which to have the show. Philadelphia is out of the question, for the same reason that applies to New York, as there is no suitable building available in Philadelphia. Massachusetts Horticultural Hall in Boston is not large enough for holding a national flower show; but, fortunately, Boston possesses a very fine building—the Mechanics' Building—which is admirably adapted for the purpose, being large enough, and also located in the best residential section of the city and very near Horticultural Hall.

Regarding the time for holding the next National Flower Show, the committee recommend that it be held in the spring of 1911, which is as early as it will be possible to prepare for an exhibition of so much importance as a National Flower Show, as a great many exhibits will have to be prepared especially, and it will take at least a year to get them in shape. If the show is held in the spring of 1911, there will be ample time for preparation, but not too much.

In regard to the date, the committee suggest the end of March. Easter occurs on April 16th in 1911, so if the exhibition is held the end of March, it will not interfere with Easter work. This will be mid-Lent, which the committee consider the most favorable time of the year—if the exhibition is to be held in the spring—because more stock is available at that time, and it interferes less with the work of the men engaged along commercial lines.

The committee think that every endeavor should be made to interest the private gardeners on large estates so as to bring out as large exhibits as possible from our large private collections. There should, also, be some strong original floricultural feature or features, and the flower show proper should not be encumbered with tradesmen's exhibits or florists' supplies in horticultural wares. For such commercial exhibits a separate part of the building should be used.

The work should be put in hand at once, and a schedule issued not later than the end of this year or the beginning of 1910. This applies particularly to a preliminary schedule in regard to plants, which should be gotten out with the least possible delay—not later than January 1st, 1910—and it should be put in charge of either the present committee or another committee appointed for this purpose. The entire work, however, should be predicated upon a sufficient guarantee fund being subscribed to carry on such an undertaking to a successful completion; and

the committee recommend that guarantees be requested, for say, not less than \$10,000, to provide for premiums and other necessary expenses incident to such an undertaking; that 25 per cent. be called for when needed, and such other installments levied from time to time as may be found necessary to provide sufficient funds to carry forward the work.

The committee also recommend that liberal cash premiums be offered; also a series of gold, silver and bronze medals, as well as certificates of different grades, which would be prized on account of their advertising value rather than for their intrinsic merits.

It gives the committee great pleasure to recommend Boston as a suitable city in which to hold the show, because horticulture is there highly developed and there are extensive private collections available in the immediate vicinity, which always add largely to the success of such an exhibition.

ROBERT CRAIG,
Committee.

H. B. DORNER
Secretary-elect Society American Florists.

The next matter was consideration of the president's address, W. F. Kastling occupying the chair. Among the recommendations favorably reported and acted upon were the securing of data concerning production of florists' plants in foreign countries; the encouragement of appropriations for floricultural work in State Experiment Stations, and the change of the by-laws providing for the election of directors by the Society in place of appointment by the president; also the appointment by the president and directors of the secretary and treasurer. The discussion of the by-laws was a memorable one, all the old war horses of the Society being engaged in the struggle. W. R. Smith made two speeches, showing great ability and virile eloquence in favor of the change.

In the matter of the proposed organization of sections devoted to special subjects it was voted to constitute a committee to consider and prepare feasible plans for presentation next year.

WEDNESDAY EVENING.

The evening was devoted to J. Horace McFarland's illustrated lecture on "Color Photography," which in Mr. McFarland's absence was delivered by his assistant. Following this was the reception tendered to the Society members and ladies at Sinton Hotel by the Ladies' Society of American Florists. It was a charming success. Mrs. J. C. Vaughan, the president, was assisted by Mrs. Maynard, Mrs. Herr, Mrs. Peterson and others in receiving the guests, after which came singing and recitations, the singing of Miss Pearl Fulmer and the performance by the two little Poehlmann girls calling forth especial enthusiasm. The retiring president, Mrs. Vaughan, was presented with a beautiful cut-glass bowl, the presentation speech being made by Mrs. Herr. After these exercises, refreshments were served.

At the annual meeting of the Ladies' Society of American Florists on Wednesday forty-six members were present and officers were selected as follows: Miss Tillie Meinhardt of St. Louis, president; Mrs. J. V. Phillips, Brooklyn, first vice-president; Miss Margaret Vesey, Fort Wayne, second vice-president. The present secretary, Mrs. Chas. Maynard, and treasurer, Mrs. A. M. Herr, were re-elected. At the ladies' bowling at Heidelberg, Ky., on Wednesday afternoon, a grand time was enjoyed and the many beautiful prizes were worthily competed for. We shall publish the list of winners next week.

THURSDAY MORNING.

The session opened with an organ concert which was followed by the reading of Prof. Galloway's paper on "The Work of the U. S. Department of Agriculture as Affecting Floriculture," by Prof. Norton. A telegram was received from Edwin Lonsdale declining to stand for election as secretary.

The proposed amendment to the by-laws, increasing the cost of life membership to \$50 was defeated after a lively debate. The recommendation to appoint a joint committee to act with a committee of the seed and nursery trade associations on matters of mutual interest was favorably acted upon. On the parcels post proposition favorable action was also taken and the Congressional bill to constitute a domestic parcels post was endorsed. The appropriation of \$150 for the use of the Council of Horticulture was approved after a lively tilt between the advocates and opponents of the measure.

While all this was being done, voting for officers was going on in the corridor, and it took the tellers a long time to make their count on the vote for secretary, which was the only office on which there was any contest, the society adjourning in the meantime until evening. At 1.40 the count was communicated to the reporters showing that H. B. Dorner had been elected secretary by a vote of 173 to 110 for H. A. Bunyard.

THAT FIRST MEETING.

(A Paper Read Before the Society of American Florists by E. G. Hill.)

It is hard to realize that twenty-five years have passed since the organization of this society; to several of us here it seems only as yesterday since our initial meeting, though the journey from 1884 to the present time has been diversified by enough momentous incidents to convince us that it has been a full quarter century run.

The central figure of that first meeting was our president, Mr. Thorpe; those of us who were present will never forget how Uncle John in his unconventional manner and in his own unique way presided over our deliberations, nor can we forget his enthusiasm, and confidence in this Society; he was sure that it was a necessity, and positive of its success; it is a pleasure to remember his kindly manner, his tact in disarming criticism of any violation of parliamentary law, his recognition of big or little who had a suggestion to offer, or an amendment to propose. We all realized that we had a thoroughly informed, sincere, and kind hearted man in the chair and every member present came readily and gracefully under the spell of his personality; John Thorpe had most unusual gifts of both heart and mind and at that time he was at the zenith of his power and popularity.

I have surmised that the grouping together of the ex-presidents and of the original members of this Society on this occasion is to show the beneficent workings of Osterization could it be put into general practice; but though we survivors may wear crowns of silver hair and show the markings of time upon our outer man, I trust that we can claim minds serene and unimpaired and still able to face the battles of life—and of trade—with fearless vigor.

It was Arnold of Rugby who told the regents that when he failed to take the stairs three steps at a time, they must look about for a new headmaster for the school, and though many of us who met here twenty-five years ago may not now feel like taking the stairs just in that way, we can rejoice in the possession of an open mind, a determination to avoid the ruts, and a living interest in the best things in floriculture.

Notwithstanding, one of the lessons that we seniors must learn and put into practice as well is the recognition of the fact that our sons and the younger men in the Society have rightfully assumed the positions of responsibility in this organization; this is exactly as it should be; every society, every business firm, needs young blood added to keep it to its highest point of efficiency, and we elders must see to it that we do not supply more than the necessary friction as the wheels go onward.

To the carrying forward of the work of this Society has been given anxious thought, determined effort, unremitting toil, service unstinted and freely rendered by J. C. Vaughan, Myron A. Hunt, Jno. N. May, Robert Craig, B. P. Critchell and others down the line.

I think it right and proper that on this twenty-fifth anniversary we render to the memory of Myron A. Hunt a meed of praise for the splendid ser-

vice rendered the society in its organization and during its earlier years. I sometimes think that we owe to Mr. Hunt quite as much as is our debt to Mr. Thorpe; no service was too heavy, no journey too long for him to undertake if thereby he could get assistance or recruits, or turn any seeming disaffection into loyalty; he was the wise counselor, the devoted friend of our Society, the skilful organizer, and to him was due in very large measure the pronounced success of that first meeting.

Cincinnati was selected as the best place for our first meeting for two reasons, first on account of its geographical position, being intermediate between the west and east, second, on account of the hearty invitation given by the members of the profession in this city. How well these members acquitted themselves is greatly to their credit, for their willingness to help and their cordial welcome awakened a strong fraternal feeling which was of untold value.

I shall always remember with pleasure the arrival of the different delegations from the various sections of our country the night preceding the opening of our meeting; when I looked upon the faces of the men who had come up to that first session I confess I felt relieved and happy, for a great load of responsibility had been rolled away. The spirit of those present from every section of the country seemed to set the mark of approval upon the efforts put forth by those who had taken up the initial work of organization.

If you will look over the report of the proceedings of that first meeting you will find many prophetic utterances regarding the future, not only of the organization but of Floriculture—and most of these prophecies have come to pass. The topics of the papers read on that occasion were eminently practical and of far reaching importance to the trade at that time. I sometimes think we fail to appreciate the tremendous power for good that this society has wielded, but Mr. Vaughan will take up that phase of the society's work, for no one is better qualified or entitled to speak on this subject than he—he has been an indefatigable worker and a tower of strength to the organization down to the present moment.

The one question foremost in the early days of the society was Hail Insurance. This was a vital question which caused prolonged argument and discussion. The formation of the Hail Association was co-incidental with the organization of the Society of American Florists, and the wisdom of its founders is best justified by a study of its finances which you will hear presented by the treasurer.

We have looked in vain for many familiar faces that were present on that first occasion—they have gone on before, having served their day and generation—Myron Hunt, Peter Henderson, J. M. Jordan, Hendricks, John Henderson, Asmus, Scott, Thorpe, the list is a growing one; and though each death seemed a loss beyond repair, the building has been so well founded that the individual stones have been replaced without impairing its strength, a fact which is the highest tribute possible to the wisdom of the founders of the S. A. F.

SOCIETY OF AMERICAN FLORISTS AND ORNAMENTAL HORTICULTURISTS.

Registration of *Odontoglossum Crispum*.

Public notice is hereby given that the Julius Roehrs Company, of Rutherford, N. J., offer for registration the plant described below. Any person objecting to the registration of this plant or to the use of the proposed name is requested to communicate with the undersigned at once. Failing to receive objection to the registration the same will be made three weeks from this date.

Description *Odontoglossum crispum*—Blotched variety. Flowers pure white, well formed large lip. Petals, sepals and lips beautifully blotched claret purple extending to the extremities. An exceedingly distinct form of *Odontoglossum crispum*.

Name *Odontoglossum crispum*, variety E. B. Dane.

Registration of *Canna*.

Public notice is hereby given that Vaughan's Seed Store, of Chicago, Ill., offers for registration the plant described below. Any person objecting to the registration of this plant or to the use of the proposed name is requested to communicate with the undersigned at once. Failing to receive objection to the registration the same will be made three weeks from this date.

Description.—Vigorous plant, foliage green, stalk and bracts brown; large flower, brilliant scarlet. Spikes numerous, free flowering, carrying the flowers well.

Name.—This variety came from Vilmorin, Andrieux & Co., Paris, France, under the name "Philadelphia" but as one Philadelphia already exists in this country, we have taken the liberty of naming this "NEW CHICAGO."

W. N. RUDD, Secretary.

August 13, 1909.

NEW YORK TO CINCINNATI.

The New York convention party was large enough to comfortably fill two special cars which, together with a special dining car, were attached to the "Second Empire" train leaving New York City at 12.40 p. m. on Monday. A few Boston, Albany and Syracuse additions were made to the party and a good-sized delegation was taken on at Rochester, these latter occupying regular sleeping car from Buffalo. There were quite a number of ladies and this fact together with the influences of advancing civilization was probably responsible for the quiet and decorum which prevailed and which furnished material for comparisons with some of the strenuous earlier S. A. F. convention trips when hilarity untrammelled reigned from start to finish. Joe Manda and Bob Berry handled the commissary department with consummate skill and if everybody wasn't well supplied with his favorite beverage it was not the fault of these two indefatigable workers. In the party were three members who had attended the first

convention—F. R. Pierson, C. B. Weathered and W. J. Stewart.

A CORRECTION.

In our issue of last week an error crept into the inscription under the portrait of John Thorpe. It was in the last form and was not discovered until several hundred sheets had been run off and sent to the bindery. If any of our subscribers received the incorrect edition we shall be glad to supply them with the revised one on request.

THE CINCINNATI SOUVENIR.

Chairman Carmichael of the Convention Souvenir committee is entitled to the sincerest congratulation upon the eminent artistic and business ability displayed in the fine volume turned out. His cleverness in "touching" the advertising fraternity in the trade so effectively is not among the least of his triumphs.

ROYAL HORTICULTURAL SOCIETY

At the meeting on August 3 the following notable orchids were exhibited: F. Sander & Sons, St. Albans, showed a small group of plants, among which I remarked *Maxillaria venusta* magnifica, an almost pure white flower of large size and nodding in pose like the type; *Cypripedium Martin Cahuzac*; *C. lo grande Charlesworthii*, a flower with a white pouch, dorsal sepal of a rosy purple tint having darker lines and tessellation; *Laelio-Cattleya Antigone* with a rich purple lip, and sepals and petals of a lighter tint, and three-quarters of an inch in breadth where widest; *Dendrobium Sanderae*, pure white in all parts of the flower excepting the lip, which possesses five purple lines—a first-class certificate. Very beautiful was a flowering plant of *Vanda coerulea* var. *Rex*. Messrs. Stuart, Low & Co., Enfield, obtained a botanical certificate for *Eria Armeniaca*, having flowers of a light buff color, produced terminally on a stout, erect stock. The firm likewise showed several singular-looking *Masdevallias*, *Bulbophyllums* and *Oncidium abortivum*. Sir J. Colman showed a plant of *Sobralia Colmanii*, the flowers of which resemble in color those of *Alamanda Schottii*. A plant of *Phaius parviflorus*, with small white pendant flowers obtained a botanical certificate.

F. M.

NEW BEDFORD NOTES.

R. E. Nofftz has been sick, but is now about again.

Mann Bros. of Randolph were visitors of E. H. Chamberlain on August 15.

George Borden of R. H. Woodhouse, is taking his vacation in New Hampshire for the rest of the month.

Peter Murray of Fairhaven is putting up a forcing house, 22x125 ft., and also a cold storage house, 25x50 ft. for bay trees, hydrangeas and bulbs.

Napoleon Lemay has planted his violets in one house, and will plant his whole place of 20,000 square ft. of glass to violets and sweet peas for the coming season.

THE SCIENCE OUTLOOK.

(Abstract of an Address before the American Association of Nurserymen by Dr. L. H. Bailey, Ithaca, N. Y.)

I have no "practical" message to bring to this body of nurserymen today. I desire rather to speak of an attitude of mind and an outlook on the world which applies to the regulation not only of the daily life of every one of us but also to our business organizations and procedure. There is perhaps a special reason for speaking on the science outlook to a body of nurserymen because the nursery business is founded directly on a basis of science; by which I mean to say that the products that the nurserymen raises are secured by the application of scientific methods to the soil and by rational procedure in the propagating, breeding and handling of plants. The nursery business has taken on a wholly new character during the past twenty years, consequent on the application of the results secured by investigators in soil fertility, entomology, plant pathology and a dozen other departments of science. The old haphazard methods have largely disappeared and the mere rule of thumb that is not founded on reason is rapidly passing away. I am encouraged to take up a discussion of this nature because you nurserymen come together on the basis of a scientific program rather than solely to do business or to provide yourselves with recreation.

This year marks the celebration of the centenaries of a number of remarkable men. Amongst others, it has celebrated the one hundredth anniversaries of the birth of Charles Darwin and Abraham Lincoln. Perhaps no two men within the past century have more exactly typified the character of our unfolding civilization than these two. We may be said to be living in a Darwin epoch in the same sense that we are asking for evidence and taking nothing for granted which is not founded on reason and fact; and in a Lincoln epoch in the sense that we care less for the mere forms of argument and of procedure than for the justice of the final results.

We are living in a time when it is considered to be right for a man to inquire, to see for himself, and to draw his own conclusions; for there are many things to find out and the human mind is inquisitive.

We are living in the epoch of evidence. News-gathering and gossiping aside, do not depend on hearsay, nor on opinion, but on the fact and the reasons. We want proof. We are asking what truth is, and then we are not assuming that it is this or that, but are demanding the fact rather than a statement of the authority of any man.

We are living in a time when we are not afraid of our own conclusions. Men have been under bondage to other men from the first. They have been under bondage to the king or ruler, to the priest, to the capitalist, to the politician, and to current public opinion. Gradually we are passing out of our bonds and becoming free. We now enjoy physical freedom; but relatively few persons in the world are really free to think as they will or to draw their own conclusions. While they may not know it, very few persons really want to know the

truth. Very few, relative to the whole number, have open minds.

Our conclusions should follow naturally as a result of a line of work; and it matters not whether anybody is pleased with them or not. An honest man can withhold nothing in the search for truth, nor color his opinions for any persons or for any benefit to himself, or detract anything except on new evidence. When he arrives at a conclusion, he speaks; and when he speaks, he stands.

That is, we are beginning to think as individuals, and not as masses.

We are living in a time of integrity of thought. By this I mean that we follow our thought out to its logical end, and that we do not in any way modify or shade our opinions in order to meet anybody's preconceived notions or to fit our ideas into the frame of thought of our time. It is the intention of the investigator to know no other criterion than truth. If fame attracts him to modify his opinions, he is not a scientific man. If he modifies or understates or overstates his conclusions because he is afraid of them, or because he desires to win favor anywhere or with anybody, then he does not have a really scientific mind and does not have integrity of thought. He does not go where the truth leads him. Darwin wrote well toward the end of his life, "I am sure that I have never turned one inch out of my course to gain fame."

Now, if this spirit were to guide all men it would revolutionize all our business; for a large part of the business of the world is essentially morally dishonest, even though it may conform itself perfectly to the statutory law. It would also revolutionize our politics, for it would take out of political operation the element of expediency and compromise which now dominates it.

There is just as much need that we develop politics and government on a scientific method as that we develop chemistry, or botany, or physiology on that method. It is first necessary actually to study the conditions and determine what are the real facts; then on these facts to establish a constructive procedure and to let the whole question of favor and of patronage be forgotten. Government by patronage and by influence is a phase of an undeveloped society. Only as we found government on evidence and develop it in the scientific spirit can we expect to have really good government, or to make the best progress in civilization.

There is a peculiar disagreement of method in the work of many men as between their week-day attitude toward the world and their Sunday attitude. I see this in persons who are giving their lives to scientific investigation. They may be good scientists in their laboratories, in the sense that they search for fact and are exceedingly cautious not to express even an opinion that is not founded on evidence, and yet when they are out of their laboratories they accept the most impossible reactionary dogmas and theories which have no foundation, so far as we can discover, in either fact or reason. I always distrust the science of such men; or at all events, a presumption is raised in my mind as to whether a man who does not have complete integrity of thought on

one subject is likely also to have it on another. I recognize, of course, that in science and elsewhere we must accept much on faith; but the faith should be reasonable.

It is very difficult for any of us to divest ourselves of tradition and of the notions that have come with us from birth or from childhood. Most of us have positive opinions on a great many subjects on which we have no real knowledge whatever. I often say to my students that they come to college with a whole body of notions and opinions and that the probability is that every one of them is wrong. The larger part of the maxims and "wise saws" by which we guide our lives are probably either untrue, only partially true, or are misleading and unsafe as guides.

The scientific man never sets out to prove anything. He starts out to find what is true. He divests himself of all preconceived notions as to what the result is to be. He merely wants to know what is the fact, and if the fact that he discovers today contradicts the fact that he discovered yesterday, or even contradicts his own public statement of yesterday, he is the first man to acknowledge and to publish the contradiction; and he finds as much satisfaction in the discovery as if he had not made an imperfect conclusion the day before. I knew an experimenter who was very much disappointed that his experiments did not prove his theory and he therefore discarded his experiments. It is a rare quality in a man that he is able to withhold his conclusions until he has the evidence. I am afraid that most of us draw our conclusions and afterwards begin to prove them. That is, we prejudge, or are controlled by prejudice. Any one who has attended courts of law will know exactly what I mean.

If I read the work of Lincoln properly, it is that he was interested very little in the intricacies of argument and in the mere methods of reasoning. He fell back on his native judgment of men and of affairs and on his original sense of justice and drew his conclusions as quickly and as directly as possible. A large part of the debaters of the world are really sophists, more interested in the processes of their reasoning and of their judgment and in their own performance than in the accuracy of their premises, or in the final justice of their results.

These remarks ought to have application to every one of us whether we are investigators or not, and whether or not we are following a business that is founded on scientific fact. Our type of mind determines our attitude toward the world in which we live. There are very few of us, I am afraid, who have a perfectly rational and natural outlook on the world of nature. We are inclined rather to look on the forces of nature as in antagonism with us rather than to put ourselves directly into line with nature and try to work with her rather than against her. It is interesting to catch this note through all the history of mankind and in our literature. The thunder, the lightning, the storm, the wind, and much else, have been thought of as forces which are by nature opposed to us and with which we must necessarily contend. This idea, whether consciously or unconsciously, has entered into our customary attitude of

life and is expressed in our dogmas and in our creeds. I should like to do something, if I can, to enable mankind to overcome the traditional and theological fear of nature.

You, as nurserymen, are interested in country life. You desire to see it developed. The beginning of all real development is a rational outlook on the part of those who live in the open country. Country people must interpret nature from cause and effect, rather than by tradition, notion, or prejudice. The colleges of agriculture and experiment stations are doing just this for country people. Beyond all "practical" application of the work of these institutions is the new and open-minded attitude that they develop on all problems under discussion. They banish all guessing and all think-so. The farmer is now willing to learn and to cast old notions aside; and for this reason, the world is becoming a new world to him and he is beginning to understand his situation. As rapidly as he understands his situation, he will master it.

In a practical way, our attitude toward our own health is an illustration of what I have said. Most of us seem to have an inborn fear of fresh air, for example, especially at night. We shut our doors to nature. We have lived in buildings with narrow windows and have let in the air only grudgingly. We have considered the air to be compounded with miasma and with all kinds of noxious attributes. It is the old idea of the antagonism of nature. We are, of course, overcoming this feeling of antagonism and are developing a real sympathy toward the nature in which we live; but I think that the townsman is in some ways developing more rapidly in this direction than the countryman. I am inclined to think that the town boy, for example, is coming to be more of an outdoor boy than the farm boy is. He is likely to have better physical development, also. The farmer works out-of-doors and then too often escapes from the out-of-doors to the house and shuts himself up. I doubt whether any persons suffer more from lack of fresh air than many of the farmers.

We seem to carry the idea that unhealth is a necessary part of the order of the world. All organs tend to go wrong and must be regulated; and, therefore, we have liver regulators, stomach regulators, nerve regulators, and the like. There are still many persons who look on sickness as a judgment or a punishment rather than to regard it from the rational and scientific point of view. This notion is an expression of the idea that the world is, at best, a poor place to live in, that we are all inoculated with original sin, and that we are pilgrims doing penance. Now the plain fact of the matter is that it is natural to be healthy. It is natural for a fruit tree to bear: we should be careful not to put any obstacles in the way of its bearing. It is an imperative duty that we remove the obstacles to good health. This is much more important than merely to treat disease. We have developed colleges of medicine or of disease. We shall sometime have colleges of health.

Our traditional idea of God as a ruler who sits on a distant throne and manages the universe is another expression of our unsympathy with nature, because we put God above, beyond and

outside of nature. The modern outlook is to find God in nature.

What I have been saying, applies to nurserymen and to all other persons who live in the world. We must accept the natural conditions of the world as they are, and it is the part of reason to work completely in harmony with them, because we cannot make progress or live any satisfactory life otherwise. You, as nurserymen, must go to the bottom of things if you are to found your business on enduring principles. You now have the right to call on the experiment stations and colleges of agriculture to help you to determine the real facts. If there is San Jose scale, it is the responsibility of the man who owns the property to know it, to acknowledge it, to accept the consequences, and to fight it. The presence of the San Jose scale is a fact that cannot be minimized or alleviated by any kind of explanation or by any sort of certificate. It must be attacked. Much has been said in the past against the tree-agent and, I am sorry to say, sometimes, against nurserymen themselves, for what were said to be dishonest practices. I have no idea that such practices are any more common than in other bodies of men, and we hear less about them every year; but even if there were cause for widespread complaint, I think that we could depend on the natural clarification of the business within a very few years, coming as the normal result of the work of scientific men on problems that modify and that underlie the nursery business. It is impossible to have the spirit of truth work itself out in one part of a business without working it out in another part.

I look for a rapidly growing extension of all kinds of nursery business and for three reasons: (1) because there is an increasing love of plants and desire to have them; (2) because the business of growing plants depends so closely on the results of scientific study that the business must constantly tend to be open, clean and honorable; and (3) because the growing intelligence of the people will constantly demand the best standards.

If the nursery business freely avails itself of the scientific knowledge at its disposal, then it has within itself the essential elements for its self-purification and self-development.

BUSINESS CHANGES.

Elgin, Ill.—H. J. Slagle has bought the florist business of H. B. Sullivan.

San Francisco, Cal.—G. Rossi & Bro. have purchased the business of Munro & Walker.

Franklin, Mass.—William Stuart has given up his florist business and removed to Brockton.

Warren, O.—J. E. Walters & Son have purchased the Gaskill greenhouses, three in number, with about 10,000 feet of glass surface.

Alliance, O.—A. B. Barber of Reisch & Barber, florists, has sold out to his partner and will take a position with the Jones-Russell Co. of Cleveland.

Madison, O.—H. G. Taylor has purchased the C. Hagenburger Co. interest in the Madison Greenhouses, of which he has had charge for five years.

News of the Clubs and Societies

FLORISTS' HAIL ASSOCIATION OF AMERICA.

Summary of Secretary's Report for Year Ending August 1st, 1909.

The 31,816,138 square feet of glass insured by the 1,605 members of The Florists' Hail Association of America, are located in 40 different states and territories.

The total receipts for the year ending Aug. 1, 1909, including last year's balance, as per Treasurer's reports, have been \$49,231.05.

The total expenditures, as per Treasurer's reports, have been \$42,116.37.

The cash balance at the close of the year is \$7,114.68, of which \$1,621.64 belongs to the reserve fund, leaving \$5,493.04 in the emergency fund.

The amount of interest collected on Reserve Fund investments for the year is \$881.00. The amount of interest collected on bank deposits for the year has been \$515.93.

Losses representing a breakage of 215,665 sq. ft. of single thick and 231,827 sq. ft. of double thick glass have been paid during the year.

1,400 losses have been adjusted since the organization of the F. H. A., involving a total expenditure of more than \$161,000.00.

The 10 per cent assessment on hazardous risks netted the treasury \$65.31.

The estimated liabilities of the Association are, unadjusted losses amounting to possibly \$2,500.

The reserve fund consists of \$20,000.00 in securities and \$1,621.64 in cash, being a total of \$21,621.64.

The losses paid by the Florists' Hail Association since its organization is an indisputable argument in favor of Hail Insurance and the fact that the excessive losses of the past two seasons have been paid without the levy of an extra assessment is a matter of just pride for the officials of the Association, and one for congratulation by its members.

JOHN G. ESLER, Secretary.

NEW ENGLAND DAHLIA SOCIETY.

The New England Dahlia Society will give its second exhibit at Horticultural Hall, Boston, on September 10, 11 and 12. This year's exhibit is expected to eclipse anything of its kind ever undertaken for the reason that all outlooks for good flowers are splendid and with the enormous increase in our society competition in all classes ought to be sharp.

In connection with this exhibit we shall issue a special number of the Dahlia News which no doubt will be one of the most interesting papers ever published on this subject for it will contain articles by many prominent American and English writers. Germany and France will also be represented. Some of the articles will be illustrated, our first attempt in this line with the Dahlia News.

MAURICE FULD, Sec'y.

ST. LOUIS FLORIST CLUB.

On Thursday, August 12th, the annual meeting of the club took place at the home of the Bentzen Floral Co. When President William Young called the meeting to order there were thirty members present including several visitors. After all the opening proceedings had been disposed of and the different committees had reported, the election of officers took place and the following was the result: President, George B. Windler; vice-president, John Connon; secretary, J. J. Beneke; treasurer, W. C. Smith; three-year term trustee, A. J. Bentzen. President Young declined the nomination, saying he did not believe in the third term. It is to be hoped that the members will assist the new officers in their efforts to arouse interest in the meetings and secure new accessions to the club. Joseph Hauser of Webster, applied for membership.

The trustees were instructed to find a new location for club meetings by October. The next meeting will be held with the H. J. Weber & Sons Nursery Co. in Gardenville. The meeting proceeded with the question box and a general talk on carnations, roses and chrysanthemums followed.

After adjournment Mr. Bentzen invited the members to look over his place, which we found in tip top shape; this ended with a fine lunch on the lawn in the rear of the house. A vote of thanks was extended to his company for the afternoon's entertainment.

BUFFALO FLORIST CLUB.

At the next meeting of the club on September 7, William Legg will read a paper on "Summer Flowers in Buffalo Parks." This paper was booked for the August meeting but was held over on account of the small attendance. A full house is expected in September. Other papers will be read at each of the coming meetings. The outdoor paper is being prepared by N. A. Adams on "The Slaughter of the Flowers."

DENVER FLORISTS' CLUB.

A florists' club in Denver, Colo., has been under consideration for some time and the effort bore fruit at a meeting on August 5, when 73 of the craft organized and elected J. A. Valentine president, E. E. Long vice-president, A. H. Bush secretary and John Berry treasurer. The next meeting will be on September 9.

CLUB AND SOCIETY NOTES.

The Lachine Horticultural Society (Can.) will hold the tenth annual exhibition on Aug. 26 in Town Hall.

The annual flower exhibition of the Garden Club of New Canaan, Conn., will be held on the grounds of Mrs. Charles E. Diefenthaler on August 14.

At the Wisconsin State Fair, to be held this fall, there will be a daily demonstration in preparing various compounds used in fighting insect pests and diseases that attack fruit and vegetables.

During Recess

GARDENERS' AND FLORISTS' CLUB OF BOSTON.

About thirty-five members of the club visited the nurseries of W. B. Whittier & Co. at South Framingham, on Saturday, August 14, and were delightfully entertained by Mr. Whittier and his assistants who took them through the extensive grounds, comprising 175 acres, planted with evergreens choice and rare, blue spruce in splendid condition, peonies and flowering stock that made one doubt it was the end of the season. A cold storage house, warranted frost proof, 60 x 150, has just been constructed. A piece of woodland is being cleared to make room for a shipment of rhododendrons in addition to the large stock already carried. A recent purchase of land will give this firm a tract of 250 acres, and it was the sentiment of the visitors that it is one of the finest nurseries in New England. Refreshments were served; remarks were made by William Downs, president of the club, T. J. Grey, Messrs. Butterworth and Palmer, and fittingly responded to by Mr. Whittier. Although it was late when the party broke up several of them went on to S. J. Goddard's place where they found the violets and all the stock in the house in prime condition. Altogether this was one of the most enjoyable outings the club has had.

MARKET GARDENERS' ASSOCIATION OF BOSTON.

The field day of the Market Gardeners' Association of Boston, was held at Peddock's Island, in the harbor, on Saturday, August 14. Over 300 were present and the affair was a most brilliant success. After a sumptuous dinner the athletic games were run off, with winners as follows:—

One hundred yard dash—W. E. Belleville.

Pat men's race—Patrick Hurley.

Sack race—W. W. Rugg.

Old men's race—George D. Moore.

Three-legged race—W. E. Belleville and W. G. Waite.

Running broad jump—W. E. Belleville.

The event of the day that attracted the most attention, however, was the quoit match, doubles and singles. Long and earnestly was this match fought out. Several remarkable exhibitions of quoit throwing were made by the contestants. When George Purington, one of the most popular men in the market district, won the singles and again with E. F. Skahan won the doubles, the air was rent with cheers. A baseball game closed the day's sports.

The committee of arrangements consisted of E. F. Skahan, George Purington and J. P. Esty.

The committee in charge of the sports consisted of George Lovell, Fred Moore and T. F. Donahue.

ALBANY (N. Y.) FLORISTS' CLUB.

Over one hundred persons enjoyed the third annual outing and clam-bake held by the Albany Florists' club at Henkes Brothers' grove near Newtonville. The day was spent in looking

over the new greenhouse and in sports and games.

James S. Snyder of Rhinebeck, won the fat men's race and received an umbrella. The other contests were as follows: Boys' race, Herbert Kurth; free for all, George Skiunkel; ladies' race, Miss Belle Reilly; sack race, John G. Young; broad jump, and hop, skip and jump, William Newport. A five-inning baseball game was played late in the evening between picked up teams representing the retailers and the growers. The game resulted in a victory for the growers by a score of 6 to 5. Kurth and Butts acted as battery for the retailers, and Newport and Haggerty for the growers. J. H. Snyder was the only one to make a home run, a surprise to all as he is the fattest member of the club.

The outing was held this year two weeks earlier than usual, because the club is making extensive preparations for its first flower show to be held in the state armory in November.

BIG PLANT BUSINESS OF HELLER BROS. TRANSFERRED TO THE DINGEE & CONARD CO.

A deal was consummated this week by which the live plant business of Heller Bros. was transferred to the Dingee & Conard Company of West Grove, Pa. This does not include the cut flower business, known as the South Park Floral Company.

The negotiations were made by Mr. P. Joseph Lynch and several of his associates, who were here several days. Mr. Lynch is the financial man and general manager of the Dingee & Conard Co., which is the largest mail order rose growing concern in America. It was our pleasure to meet Mr. Lynch, and he impresses one as a very live wire in any undertaking.

The business would not have been sold if Herbert Heller had lived, he having had active charge of this department, but Myer Heller has too many other interests to devote the time to properly carry it on. The business will remain here and be run under the name of Heller Bros., the new owners having purchased the entire stock and good will of Heller Bros. The glass covers an area of about forty thousand square feet.

It is the purpose of the new owners to eventually make this the equal of their mammoth place at West Grove, Pa. Mr. Lynch will not move here but will make frequent visits in addition to having a competent manager.—New Castle (Indiana) Times, Aug. 14th.

SASSAFRAS OFFICINALE.

(*Laurus Sassafras*, L.)

This tree, abundant in New England woods, is, our London correspondent states, rare in England and Middle European countries. He sends the following interesting note which is worthy of attention from nurserymen and tree seed gatherers.

"In the neighborhood of London, a few examples may be found—a tree 30 feet in height having a crown of 20 feet in diameter, and of perfect shape is growing at Cannizaro House, on the border of Wimbledon Common. At Guessen, in Germany, the tree when young is affected oftentimes by hard frost. At the Botanical Garden at that place, specimens were killed to the ground level in the cold winter of 1879-

89, and the male plant was killed outright, while the female made strong growths from the stump, out of which, a stem and crown, have developed into an example 25 feet in height and of columnar form.

"Sassafras officinale has been cultivated in Europe since the 16th century as an extremely important medicinal subject, and it is surprising that this handsome foliage plant, on which scarcely a leaf resembles another, should not be more common in gardens. The difficulty in propagating must account for this; and root suckers rarely occur even on large trees, (one is found on the Borromei Island in Maggiore Lake). Seeds with vegetative power, for the reason that the species is dioecious, are also rare; and American harvested seeds, as a rule have lost their vitality. It is necessary to gather the seeds as soon as they are ripe, enclosing them in powdered charcoal or dry peat, in air tight soldered tin boxes and despatch these forthwith to their destination." F. The Effect of Recent Rain on Crops.

At last the protracted drought has been effectively broken, but too late to benefit many crops. The rain of the early part of this week was a real soaker, extending over nearly 48 hours. As a rule it came down gently, and was eagerly drank by the thirsty earth. It will do corn much good, and particularly late varieties, but a warm, late fall will be required to mature the crop, which at best will be light in the east. In some sections it may prove of more injury than benefit. Onions, which had as a rule matured, may start a second growth, making them soft and poor keepers.

A report that there will be a bumper crop of onions hardly seems justified under existing conditions. As a rule the bulbs will be small, and probably this fact will militate against the price, and growers will not realize as much for the crop as though they were of larger size, while the net yield will no doubt be smaller.

At this writing it is not known how extended the rain has been, but within its area the sowing of fall crops has been made much easier, and the acreage is likely to be much larger than a year ago and especially of winter grains.

Shortage in Pea Crop a Certainty.

The predicted heavy shortage in the pea crop becomes more a certainty every day, and as the season advances, any lingering hopes that conditions might not be as bad as represented are fading before sad realities. Verily the path of the pea and bean grower is beset with thorns, for what with the grumblings of his customers and the deep discontent of the farmers as a result of repeated crop disappointments, he is himself an unhappy, disappointed man. It is a foregone conclusion that the farmers will demand more money for next year's crop, and it will be harder than ever to secure acreage, while the seedsmen and canners will balk most determinedly against any advance in prices. Lo, the poor seed grower! He goeth forth in the winter to seek for orders, and gathereth a goodly sheaf by the springtime, when he becometh exceeding light of heart and very cheery, but ere the sere and yellow leaf of autumn, he is much cast down and sigheth for the simple life or a lodge in some vast wilderness. And his troubles have just commenced.

GIANT PRIZE PANSY SEED

Our Giant Strain of Pansies should not be compared with the ordinary Giant Grimardeau, as the seed we offer will produce flowers of much heavier texture.

Henry F. Michell Co., 1018 Market St., Philadelphia, Pa.

CALIFORNIA GARDENERS RE- PUDIATE THE "WIZARD."

The following resolution was unanimously adopted by the Pasadena Gardeners' Association at a recent meeting:

"Be it resolved, that the Pasadena Gardeners' association hereby strongly condemn the nature-faking methods and the exploitations of alleged but false new creations by Luther Burbank, and deplores the fact that a false impression has been given the public concerning plant breeding by Burbank. It is the sense of this association that this impression should be corrected."

The meeting was held in the assembly room of the Pasadena board of trade, and about one hundred gardeners and florists were present. It was attended not only by members of the association, but a large delegation from the Los Angeles florists' organization, some of whom took part in the discussion. The discussion occupied the entire evening, and the feature of it was a report made by a personal representative of the Southern California florists and gardeners who was recently sent to Santa Rosa to investigate Burbank and his claims.

We thought it would come to this in due time. Where a man feeds on flattery from irresponsible and ignorant sources and studiously ignores those whose knowledge and experience qualifies them to judge of his achievements, accepting silly public adulation for unproven merit, without protest, he has nobody to blame but himself when exposure and disgrace come, as they inevitably must in these days of enlightened publicity. Then, all the things that he may have creditably accomplished must suffer in the sweeping condemnation which is sure to follow.

CATALOGUES RECEIVED.

Wm. Elliott & Sons, New York.—Midseason list of Pot Grown Strawberry and Vegetable Plants.

T. C. Thurlow & Co., Cherry Hill Nurseries, West Newbury, Mass.—Wholesale List of Select Peonies, Iris and Phlox with Cultural Directions.

Stuart Low & Co. report that although they have experienced an abnormally wet and cold season, cyclamen and schizanthus seed are average crops. The only novelty in the cyclamen way this year is Salmon Pioneer, of the crested tribe, a soft salmon not so intense in color as Low's Salmon King, and which is a useful addition to this class.

THE STALK BORER.

A rhubarb stalk was sent to the Division of Zoology of the Pennsylvania Department of Agriculture for examination, and Professor H. A. Surface, the State Zoologist, found it infested by the insect known as the Stalk Borer (*Papaipema nitela*). In sending a report concerning this pest to the person from whom the specimen plant was received, Professor Surface said:

"This is a very curious pest because it bores in the stalks of many kinds of cultivated plants; likewise into other plants, as well as weeds, large enough to nourish it. I note with interest that you found it boring in corn stalks. It is destructive to potatoes and tomatoes, and to the stalks of many kinds of flowering plants, but I have not before found it in the rhubarb.

"I do not believe that you will continue to find it becoming a serious pest on the farm if you will follow the directions given below. You cannot kill it after it once attacks the plant, and save the infested stalk, because it bores in the inside and the remedies usually employed for insects will not reach it. Therefore, it must be destroyed, or prevented, by the following means:

(1) Mow all weeds, of whatever kinds, that have stems large enough for the borer to enter. Do this at least once every six weeks.

(2) Gather and burn all infested stalks, or parts of cultivated plants, as soon as the borers are seen.

(3) As soon as potatoes are removed from the ground rake the vines together and burn them immediately. Do not wait for the vines to become dry, but throw them on a hot brush fire at once.

(4) Likewise, destroy tomato vines as soon as possible after the crop is gathered, and in fact other plants where this can be done.

(5) Rotate, or change, crops, so that the same kind of crop does not grow many years in succession on the same ground."

Careful attention and prompt delivery.

LOUISVILLE, KY.
JACOB SCHULZ,
550 South Fourth Ave.

CHICAGO NOTES.

Theo. Hanschke, 851 N. California Ave., is enlarging his retail store and making many improvements.

Winterson's Seed Store was the first Chicago firm to receive goods and pay duty under the new tariff law. They received a car load of bulbs, Roman hyacinths, freesias, and others from France.

Stankowicz & Benda is the name of a new firm having a flower store at 2928 Milwaukee Ave. Mr. Stankowicz has for 14 years been superintendent of the Polish and Bohemian cemetery at Niles, Mich.

The firm of Scheiden & Schoos is no more. Mr. Scheiden has bought out his partner and will hereafter conduct the business alone. This firm sent out the red carnation Pres. Taft last year. Mr. Schoos will probably go into business alone in the near future.

Personals.

Sidney Wifin spent Sunday in Milwaukee.

Richard Schmidt of F. Oechslin's, will attend the convention and also visit his mother at Covington, Ky.

Theo. Vogel of Smyth's, will go to Cincinnati for two weeks, visit his old home and take in the convention.

Ernest Farley of Chas. McKellar's, has returned from a month at Indianapolis, where he has visited his mother.

Visitors:—J. J. La Borius, Duluth, Minn.; Mr. Tjensvold of Superior Floral Co., Superior, Wis.; Mr. and Mrs. R. E. Tuttle of Moline, Ill.; Wm. Graff of Columbus, O.

A. F. Longren is suffering from a serious eye complication which has obliged him to lay aside business for a time. He expects to leave with the Cincinnati party, however.

An extremely severe rain storm visited Chicago on the morning of the 14th. Between the hours of four and nine o'clock the government report says 3.46 inches of rain fell.

Peter Weiland of Newcastle, Ind., and Geo. Weiland of Evanston, are calling on friends with their brother Henry of California who went west four years ago to seek recovery for asthma. Mr. Weiland is greatly improved but must remain in California.

Wm. J. Smyth was able to leave the hospital last week but his entire recovery is still some distance in the future. When his leg was put in a cast it was with the knee bent, and when the cast was removed the ligaments were loosened so the limb could be straightened. It is extremely painful to attempt to bend the knee and Mr. Smyth will return to his summer home, where the accident happened, for a prolonged rest.

On to the Convention.

With the cars bearing banners 25 feet long and tastefully decorated with fresh flowers, with calliope screaming and the "German Band" making sweet (?) music, the convention train pulled out of the Polk street depot at exactly 2.42. The commissary car, Harry Philpot in charge, went ahead fairly shining with great bunches of Golden Glow and festoons of yellow daisies. Here

the calliope was located; and included in the abundance of eatables were a hundred lunch boxes provided by the Club. The rear of the observation car was covered with carnations and asters, and at the lower end appeared the banner "We're going too; The Ladies S. A. F. & O. H." The members of the Little German Band marched up the platform just before the train started out, and the long white coats did not disguise our well-known florists, many of whom posed as musicians for the first time. Others might have been there had the coats been larger.

About twenty florists from various western points arrived in the early morning.

Genial Phil. Foley was here, there and everywhere, and the last to board the train.

PERSONAL.

Visitors in Boston—Ed. Roehrs, Rutherford, N. J..

Alfred Bunyard has resigned his position with the Rosary Flower Co., New York, N. Y.

Edward F. Schmid, of Washington, D. C., has taken a position with A. B. Fox of Pittsburg.

Harry L. Hunt will resume the management of the greenhouses of the Kearney Floral Co., Kearney, Nebr.

Wm. Tricker has taken the position of foreman at the Florham Farms greenhouses of C. H. Totty, Madison, N. J.

W. A. Manda will continue westward from the Cincinnati convention on a three months' trip to the Pacific coast.

The parents of T. J. Mooney of the Ansonia Floral Co., Ansonia, Conn., celebrated their golden wedding on August 11.

George Ostertag, superintendent of parks, sustained serious injuries recently in falling from his carriage and at last advice was in the hospital.

Edw. Ernhorn, state horticultural quarantine officer at the port of San Francisco, has resigned and accepted an appointment as superintendent of entomology and inspection at the port of Honolulu. He will assume his new duties October 1.

Arthur T. Herrington, who has hitherto held the position of manager of Florham Farms park and commercial greenhouses, has been appointed landscape architect for the park, a position which he is eminently fitted to fill. We understand that the improvements contemplated by Mr. Herrington will place Florham in the highest rank among the notable estates of this country.

Sunday gardening on "allotments" has been prohibited by vote of the Urban Council at Tunbridge, England. There are of course, two sides to such questions but local public opinion is usually a better controller than enactments. Caring for the welfare of plants and trees does not greatly differ from similar attention given to animals and comes much closer to the classification of "necessary labor" than many things which are universally approved of on "the Lord's day", throughout the civilized world.

Flower Market Reports.

The severe storm the **BOSTON** first few days of the week has had quite an effect upon the market, and as a result both asters and sweet peas have suffered. American Beauties have a fair demand and the supply is good. There is a shortage of white roses and what few are seen in the market are short stemmed and of little value. Gladioli are plentiful.

The past week trade **BUFFALO** had not improved over previous weeks. Saturday being "clean up day" the abundance of stock which was figured to be sold still remained with the wholesaler, especially roses of ordinary quality. The early aster crop is about over and those that were had the past week have been short stems and small blooms, but any select stock was picked up quickly. Mixed varieties of gladioli are also plentiful, a good portion being carried along. In the rose line there is much to be said. The severe hot spell brought shipments of White Killarney, pink Killarney, Kaiserin, Richmond, Detroit and others in full open condition with very weak demand. Beauties have had a better call and have sold exceedingly well. There are plenty of all kind of lilies, also smilax, adiantum, asparagus and ferns, nothing short in this line.

At no time of this year **CHICAGO** has the market apparently been duller than at the beginning of the last half of August. Carnations are still an unknown quantity. Asters might almost as well be, and there is little hope for any better stock from the late aster plants because the early drouth stunted the growth. Roses are gaining. The two summer favorites, Kaiserin and Killarney, are fair both in quality and quantity and Maryland is also fairly good. Beauties are gaining, but there is not a heavy demand at present. The dull season is at its dullest, and an unusual number of florists are taking advantage of it to be off on a vacation trip. Some really good gladioli are in the market but find slow sale

The market is with-
NEW YORK out feature; dullness prevails. A more than ample supply of asters makes clearances difficult. There are nearly all varieties of roses to be had and some of very good quality; but the bulk are short stems or mildewed and these bring but a trifle. Of carnations only a limited number are received and these do not move rapidly every day. Lilies are in good supply and outdoor stock generally is having a hard time of it for there is much of it. Orchids and gardenias are light in supply.

Market a gain
PHILADELPHIA glutted last week with an exuberance of flowers. The worst offenders

were asters and gladioli. Asters remained very poor quality, but the later varieties are now commencing to arrive, and, with the recent rains, things will soon be much better with this crop. Roses generally were too plentiful with the exception of American Beauty. The flowers of the latter are rather small but otherwise good; excellent as to color and foliage. Killarney sold better, although there are a great many shorts coming in that have to be sold cheap. Kaiserin is still the leading white rose but there are a few nice Brides arriving. Carnations remain scarce and of poor quality. Lily of the valley is good and cleans up to supply limit. Not enough orchids for the demand. Gardenias are improving right along. All kinds of greens far too plentiful.

WASHINGTON (said by wiseacres to be the worst in seventeen years) has finally been broken by several showers, but not enough rain has fallen to relieve the situation materially, though vegetation has been

PHILADELPHIA NOTES.

Paul Huebner of the Reading R. R. landscape department, has been suffering from a severe attack of acute indigestion for the past three weeks. He is now in the Episcopal Hospital at Front and Lehigh avenues, and at latest reports it was feared he would have to remain there for some time.

P. Joseph Lynch, of the Dingee & Conard Co., passed through our city on the 14th inst., on his way home from New Castle, Indiana, where he

" " & Sprea. (100 bchs).....	10.00	to 25.00	10.00	to 25.00

had been completing the deal for the purchase of the Heller Bros.' establishment. His purchase will add some forty thousand feet of glass to the seventy greenhouses operated by the company at West Grove, Pa. A detailed account of this new enterprise will be found in another column.

After attending the convention, Joseph Heacock of the Joseph Heacock Co., Wyncore, will make a trip west for a few weeks. His journey will extend as far as British Columbia where his son was lost over two years ago. The Heacock Company has made an important purchase of real estate recently. The tract is fifty-eight acres in extent and is located at Rockliff Station on the Philadelphia-New York branch of the Reading R. R., eighteen miles north of their present location. Of late years the soil difficulty has been getting more and more acute around Wyncote. The new place is about half a mile from the station, on a level road, with good soil and good water. They expect to commence building early next spring. The houses

will be built especially for rose growing—the intention being to operate the present range exclusively for palms and pot plants.

Business in New Bedford, Mass., is very quiet, and with plenty of flowers from the gardens of the florists the rubbish heap seems to be the best customer.

SALE of STALLS

The Sixth Annual Sale of Stalls in the Boston Co-operative Flower Market will be held on Saturday, August 28, 1909, at Music Hall Place, Winter Street, Boston, Mass., at 9 A.M. All growers of Flowers will find it to their interest to attend this sale.

E. CARTWRIGHT Pres. JOHN MCFARLAND Sec'y.

Buyer's Directory and Ready Reference Guide

Advertisements under this head, one cent a word. Initials count as words.

Display advertisers in this issue are also listed under this classification without charge. Reference to List of Advertisers will indicate the respective pages.

Buyers failing to find what they want in this list will confer a favor by writing us and we will try to put them in communication with reliable dealers.

WHAT DO YOU THINK?

Obituary

Augustus Dietrich.

Augustus Dietrich, a florist at 3425 Kensington avenue, Philadelphia, was killed in a trolley accident on the 15th inst. The following account of the accident is from the Philadelphia Record:—

Mr. Dietrich, who was connected with many German societies, was well-known in Kensington, where he had been in the florist and nursery business for the past 35 years. His greenhouses occupy nearly a block, and it was in front of these that he was run down by a fast-speeding car. With his sister, Mabel, Frederick Dietrich, a son, was a shocked witness of the horrible accident, and on running out to render assistance was made speechless by the discovery that the body was that of his own father.

Mr. Dietrich had been suffering for several months with an affection of the knee, and was in the habit of receiving nightly treatments at the home of his physician, Dr. Conrad Smith, almost directly across the street from his home. After sitting all the evening with his family, he walked over to the doctor's house for his customary treatment. On returning he started across the street about 11 o'clock. His residence is at the corner of Schiller street, which is the lowest point of a steep incline. Stepping off the curb he allowed a south-bound car to speed past him, but in the noise made by this he failed to hear the approach of a car at full speed from the opposite direction. He walked directly into the front of the car and was struck and dragged underneath with great force. His body was mangled almost beyond recognition. A large crowd gathered and lifted the heavy car from the corpse. When this had been done, young Dietrich, who had helped, was heard to give a slight cry of horror, and fell over in a faint. Dr. Smith was then summoned and saw at a glance that his friend had been instantly killed.

Aldrich J. Pennock.

Aldrich J. Pennock of Lansdowne, Del. Co., Pa., died after a brief illness at Denver, Col., on the 16th inst. Deceased was on a vacation accompanied by his wife when stricken. Cerebro-meningitis was the direct cause of death, and this was supposed to have developed from a second attack of inflammatory rheumatism from which he suffered severely two years ago. Interment took place at the South Western Burying Ground, Lansdowne, Pa., on the 20th inst. Mr. Pennock was a son of Abram L. Pennock of Lansdowne, and an elder brother of Samuel S. Pennock, of the Pennock-Meehan Co., and J. Liddon Pennock of Pennock Bros., Philadelphia. He was born August 20th, 1868, and entered the greenhouse business with his father at Lansdowne, in 1887, under the title of A. L. Pennock & Son. Some years later Abram L. Pennock retired and the firm became Aldrich J. Pennock. The establishment made a great specialty of lily of the valley forcing, at which it was very successful.

Although of a rather retiring and

diffident disposition, Aldrich J. Pennock had hosts of warm friends who held him in the highest esteem and affection. It has been remarked of him that neither his father nor mother nor anyone else ever heard a harsh word from him under any circumstance! If a mild mannered man ever lived, that man was Aldrich J. Pennock.

W. H. Gullett.

William Henry Gullett of Lincoln, Ill., died suddenly at his home just after his seventy-seventh birthday. Mr. Gullett started in the nursery business in 1860. In 1884 W. F. Gullett formed a partnership with him as W. H. Gullett & Son. In 1889 he retired and C. E. and W. J. Gullett associated themselves with him, and the present firm name of W. H. Gullett & Sons was adopted. A widow and seven children survive him.

John Snyder.

John Snyder, a native of Germany, but a resident of Kansas City for thirty-five years, died on August 5 from injuries received by being thrown from his wagon. For over twenty years Mr. Snyder carried on a flower store on Walnut street, giving up the business five years ago. He was 58 years old. A widow and three children survive him.

Mrs. Thomas Kane.

Mrs. Thomas Kane, whose husband is gardener on the estate of Mrs. C. P. Huntington, Homestead, N. Y., lost her life on August 7 in attempting to rescue her little daughter who was carried beyond her depth while bathing at Throg's Neck. Mrs. Kane was 42 years old.

CLUB AND SOCIETY NOTES.

The Vermont Horticultural Society will hold their annual meeting in Newport the first week in November.

New Orleans is planning for a flower carnival in October, which shall include a street parade of decorated vehicles.

The Georgia State Horticultural Society had an enjoyable meeting at Athens which closed on August 6, after re-electing the board of officers and selecting Sparta as the next meeting place.

Asters and gladioli were the leaders in the exhibit of the Worcester County Horticultural Society at Worcester, Mass., on August 12, and a nice showing of leading varieties was made. Among fruits the apple display proved most interesting, H. A. Anderson, John Pollan, Geo. C. Rice and Geo. E. Stone showing some fine specimens.

The Tarrytown (N. Y.) Horticultural Society held their summer outing at Edwards Hotel, Rye Beach, on Aug. 11, with about 150 in attendance. The usual exciting games, races, etc., were indulged in and furnished much amusement. The 100-yard dash was won by G. McCahon; the drummers' race of 100 yards by Wm. Scott, Jr., first, Davis McFarlane, second; running broad jump, A. M. Robertson; potato race, M. McGonachie. The pot smashing contest furnished the fun of the day. The committee in charge was James W. Smith, William Scott and John Brunger.

ROSES AND THEIR CULTURE FOR COMMERCIAL PURPOSES.

Paper Read Before the Morris Co. Gardeners' and Florists' Society, April 14, 1909, by Wm. G. Baddeley.

Varieties to Grow.

Of course this depends a great deal upon what the grower requires, or what he has demand for in the New York market, as that is the place where most of the roses grown in this vicinity are disposed of. There is no doubt that the standard varieties, for commercial purposes are best, all things considered, and to meet conditions in the New York market, it is well to grow about one-quarter white and three-quarters pink. If you can grow a good red profitably, grow as many as you reasonably can. Before going further, I would like to impress on you that it is not, as a rule, the plants that produce show flowers that are the best money makers, but the money makers, if handled properly, can be made to produce show flowers.

Beauties, of course, are standard in their class and no doubt will be for some time to come. It does not pay the small grower, however, to grow them, as they have been taken up as a specialty by nearly all the large growers. When Beauties are grown in large quantities they can be handled to better advantage and produced more cheaply. The wholesaler prefers to receive the bulk of them from one source. Therefore the small grower will not realize a high price when his supply is irregular and uncertain. There have been numerous new varieties put on the market in the last few years, namely: Rhea Ried, Mrs. Potter Palmer, Mrs. Jardine, Wyndmoor, My Maryland, Queen Beatrice, Pink and White Killarney and others, and I am sorry to say that excepting My Maryland and Pink and White Killarney, most of them are no real improvement on what we already have, excepting, of course, that they have their value as novelties. Under favorable conditions many of them have given good results. Most of them are well bred. Pink and White Killarney are worth spending a little time on, as they have each proven to be a favorite as a commercial flower as well as a top notcher as a show flower. Killarney is justly entitled to all the praise it has received. I consider it the best money maker that has ever been grown. We will consider Pink and White Killarney together, as White Killarney bears the same relation to Pink Killarney that Bridesmaid does to Mermet, and therefore being of the blood and habit each will do equally well under conditions that are identical.

Propagating Killarney.

Starting from the cutting, would say that when taking wood from Killarney plants for cuttings, considerable care must be exercised as to what kind to take, as it is characteristic of this plant to drop its foliage before it attains much age, and as they will drop them as quickly, or more so, in the sand than they will on the plant, you should strive to make your cuttings of wood which is not too old nor yet young enough to be of soft texture. But should your Killarney cuttings

WANTS, FOR SALE, ETC.

Advertisements in this column are sent a word. Initials count as words. Cash with order. All correspondence addressed "care HORTICULTURE" should be sent to 11 Hamilton Place, Boston.

HELP WANTED

WANTED

An experienced man to take charge of an established route for the sale of Nursery Stock. A good salary for the right party. Send full particulars at once.

WANTED—A good grower of roses, carnations, chrysanthemums and potted plants in a commercial establishment. Good position to the right man. J. M. Ward & Co., Peabody, Mass.

SITUATIONS WANTED

SITUATION WANTED by first-class greenhouse man; 13 years' experience in growing chrysanthemums and all kinds of cut flowers and plants. Good propagator. Reliable and sober. Please state wages, first letter. Address Martin Darsch, care Mitchell, 1298 Nostrand Ave., Brooklyn, N. Y.

FOR SALE

FOR SALE—Special 16 x 18 and 18 x 24 double thick glass in "A" and "B" qualities. Buy now and save money. Write **PARSHELSKY BROTHERS, INC.**, 60 Montrose Ave., Brooklyn, N. Y.

FOR SALE—1-8 section Weathered boiler in good condition; nearly new. **N. F. McCarthy & Co.**, 84 Hawley St., Boston, Mass.

lose their foliage in the sand and apparently look like a failure, just let them alone and properly attend to your watering and temperature and if necessary let them stay right there two months or more and you will find that your efforts have not been in vain after all. This rule, of course, applies to cases where nothing detrimental or unusual has happened and the cuttings have simply lost their leaves and rested.

Rules for Pinching.

Planting, watering, airing, etc., with Killarney is carried out in the same manner as other roses during summer and fall. Cutting the buds should not be practiced, but rather keep them all pinched, and when you pinch them, pinch them back to the first leaf containing five separate leaflets, as from such an eye you will get a growth that will run up and make a strong stem. You should continue this pinching until Oct. 20, when it will be wise

to take about one-half the buds and on Nov. the 1st take off the other half; then stop pinching. This will bring in your crop for the holidays. To explain this matter more fully, will say that August, September and October in the last few years have proven to be very poor months for cut roses in the New York market, as asters, dahlias, etc., have full swing at that time. It pays better to get roses in in May, June and July, and as Killarney is a rapid grower, the pinching process has a tendency to run it up and develop into a plant which is plenty large enough by Oct. 20, if planted on July 15, providing, of course, that the stock is in good condition when planted. You will obtain better results than if you put them in earlier, in this way. It certainly pays much better, for by following the foregoing rules you will not only bring your crop in for Christmas but you will strike Easter, too, unless weather conditions are radically wrong. I would say further that buds that come from a second or third growth of Killarney are far better in every way than those taken from a first or single growth.

Feeding Killarney.

Killarney is a fine grower and is always busy, therefore it requires lots of food, but should not be fed with a rank chemical. The way it should be fed is in small quantities and often. The kind of food to give is a fertilizer that runs high in nitrogen or ammonia, in small quantities, just after they have started a new growth, say, when this growth is from three to six inches long. This kind of food will have a tendency to make your stems run up longer. Then just before the buds start to develop, apply in small quantities potash in the form of Canadian unleached hardwood ashes. This kind of food will make your buds heavy and give them color. I would not advise strongly as to what fertilizers to use in every case or in what quantities, as this matter depends altogether on the condition of your plants, the soil they are planted in, and who is growing them, but I would advise that you do not use too much rank fertilizer at any time, as it is apt to cause a bad case of indigestion, and I also would advise strongly against applying more than can be used up promptly by your plants, be it in the form of cow manure or otherwise, as too much bulk on your benches will prevent them from drying out readily, and you know that the faster your soil dries out and the more frequently you can water, the oftener you can feed, and the faster your plants grow the more profitable they are.

My Maryland.

My Maryland has many good features. Its color and fragrance are pleasing. The size and shape of the bud is all that could be wished for and stem and foliage are good, still there seems to be some uncertainty as to its commercial value as yet. The features of this rose which do not please as I observe it are, that there is a little too much hybrid blood in it, that it seems to have a little inclination to be sleepy in the winter months, and it does not crop as well as it might, but I think when growers become more familiar with

its requirements, more good qualities will be brought out, and it may take a permanent place in the front rank.

Richmond.

For red, Richmond seems to be about the best thing in sight, and certainly it is fine when brought to perfection. This rose seems to have its favorite localities; districts of Boston, Philadelphia and Chicago turn out Richmonds that make one marvel, and it is painful and disappointing that in this vicinity we cannot duplicate them. Richmond, as you know, is of practically no value in hot weather, as it will not keep. In the short days when it is selling for good money, it is sluggish and slow, and one cannot cut much from them when he wants to. Then comes spring with its good growing weather and they come along nicely, but by this time the Brunners and other red stuff are in the market and they do not give much in the way of returns. Therefore, in this locality it does not pay as well as other varieties. What we hope to see in the near future is a red rose with the stem and foliage of Richmond, head of Bride or Bridesmaid and freedom of growth of Killarney. This is worth trying for and I hope some of our specialists will strive to attain it.

In growing roses you should always strive for the following three essential qualities; you should produce a rose to please the consumer; one that the wholesaler as well as the retailer can sell at a fair price and one that will produce enough flowers to make it profitable to the grower.

NEWS NOTES.

Adell, Wis.—A. E. Frost is arranging to carry on the nursery business here.

Litchfield, Conn.—The Rosemere Nursery is installing a new heating system.

Springfield, Mass.—Mark Aitken, the florist, has bought the E. N. Powers' place at Agawam and in the spring will erect a large greenhouse thereon.

Fruit that Pays a Profit

is the only kind worth growing. To bring young stock into earliest bearing and to secure maximum yields from matured stock use **POTASH**, according to the needs of different fruits.

Quantity is increased and quality is improved by its application; that is why.

Potash Pays

Proof can be shown by hundreds of poor orchards turned into good ones by the application of Potash. Your commercial fertilizer should contain at least 10 to 12 per cent. of Potash

THE BAG-WORM PEST.

A not uncommon pest, and one which is often quite destructive, was received at the Division of Zoology of the Pennsylvania Department of Agriculture, attached to a twig of the black locust.

State Zoologist Surface, in acknowledging the receipt of the specimen, said:

"The locust branch which you sent to us has been received, with the attached insects. This is entered in our collection as No. 13,559. The pest is the Bag-Worm, which is a chewing insect, and feeds on the leaves of various kinds of trees, especially apple, plum, quince, cherry, and the conifera. It can be killed by picking by hand, and destroyed by burning; or, it can be killed by spraying with arsenical liquids, using one-third pound of Paris green, or two pounds of arsenate lead, to fifty gallons of water. Its chief destruction is in feeding on the foliage of trees on which it is found, making them brown and full of holes.

"You have noticed the little pieces of wood on the outside of the cocoon. This, of course, is the bag, and by cutting it open you will find the worm inside. There is a similar species found in India, where it is believed the worms represent the departed souls of persons who stole kindling wood in this world and are doomed to carry it with them through the next."

Buffalo, N. Y.—Jno. Spiess & Son, Peach street florists, are erecting a store and dwelling in addition to their greenhouses.
Pittsburg, Pa.—A disastrous hail and wind storm swept over this section Aug. 5, wrecking the glass of A. R. Peacock, H. J. Heinz, H. C. Finch. Randolph & McClements lost about 15,000 feet of glass.

The Advance Co., Richmond, Ind., writes that they have received an inquiry from Berlin, Germany, for opportunity to handle their goods. Orders are now piling in on them.

A sentiment in favor of an annual Arbor Day is growing in Great Britain. The first half of October has been suggested as a suitable time and roadside fruit tree planting after the manner of some districts in Germany has been recommended by some writers as a good way to make a beginning which will at once enlist the interest of the public.

WHY THE U-BAR WAS CHOSEN HERE

The owner lives in a large city where space is both valuable and limited. He wanted a house that would fit attractively in this limited space. The many nearby buildings shutting off the light made it absolutely imperative that it should be the lightest possible construction in order to secure best growing results. For these reasons he chose the U-Bar. Is he satisfied? Well, his neighbor recently built one too, and you know neighbors talk things over. You better send for our catalog.

Nephrolepis Elegantissima Compacta

Another New Fern Originating with Us, to be Introduced Fall, 1909

Of all the valuable introductions in ferns that we have sent out, beginning with the Pierson (Nephrolepis Piersoni), we consider Elegantissima Compacta the most valuable of all, particularly from a commercial standpoint.

While this resembles Elegantissima in a general way, it is far superior to that variety, on account of its perfect habit. Yet it can hardly be compared with Elegantissima except in a general way, because it occupies a place by itself, and is as distinct from Elegantissima as that variety is from Piersoni—in fact it bears the same relation to Elegantissima that Scottii does to Bostoniensis.

Elegantissima Compacta has an ideal habit. The fronds are considerably shorter than those of Elegantissima, and it is a more compact plant. It throws a great many more crowns naturally, making a very bushy, dwarf, compact plant. The difference between the two varieties can be seen at a glance.

Fine, strong plants, 2½-in. pots, \$5.00 per doz., \$35.00 per 100; 4-in. pots, \$7.50 per doz., \$50.00 per 100; 6-in. pans \$1.50 each; 8-in. pans, \$3.00 each.

We make a specialty of all kinds of Nephrolepis, carrying a large stock of all sizes at all times — Piersoni, Elegantissima, Superbissima, Bostoniensis, Scottii, Whitmani, Amerpohli, etc.

Notes from the Arnold Arboretum

Among the new Chinese Honeysuckles there is one which belongs to the most beautiful of all climbing Honeysuckles. This is *Lonicera tragophylla*, a species allied to *L. Caprifolium*, but with much larger bright yellow flowers in many-flowered clusters. It is a vigorous growing vine with oblong bright green and lustrous leaves from three to four inches in length. The flowers are the largest of any Honeysuckle in cultivation but one which is mentioned below and measure two and a half to three inches in length; they appear at the end of the branchlets in ten to twelve-flowered clusters subtended by a pair of connate leaves forming a roundish disk and are bright yellow. About its hardiness in this latitude we cannot yet speak definitely, as our plants have not yet been tried out of doors, but in England it has proved perfectly hardy and has flowered profusely. The species which has the largest flowers of all is *L. Hildebrandiana* from Burma, with orange red flowers from four to seven inches in length; unfortunately it is not hardy here, though it is doing well in California. Of the other recently introduced Chinese species none seems to surpass in beauty the best of the species already in cultivation. The climbing *Lonicera subaequalis* resembles the western *L. ciliosa*, while *Lonicera Henryi* is allied to *L. japonica*, but has narrower leaves and smaller red flowers not much more than half an inch long. *Lonicera lanceolata* is an upright shrub allied to *L. orientalis* with oblong-lanceolate leaves from two to three inches long and small lilac flowers followed by black fruits. *Lonicera Maackii podocarpa* is not quite as beautiful as the type which is one of the finest Bush Honeysuckles, but still too little known. *Lonicera mucronata* is a low shrub allied to *L. fragrantissima* with small white fragrant flowers appearing before the leaves which are very small and half evergreen. *Lonicera trichosanthes* is a low shrub with slender spreading and sometimes almost prostrate branches, light bluish green leaves from one to two inches long and small yellowish flowers followed by red berries. *Lonicera pileata* and *L. gynochlamydea* have insignificant whitish flowers followed by rather small red berries; the foliage of the first species is nearly evergreen and small, while the second has large lanceolate leaves from two to four inches long; both are probably tender. Three other species, viz., *L. deflexicalyx*, *L. leycesterioides* and *L. Altmannii* have already been mentioned and briefly described in the issue of June 26, and as another species new to cultivation and allied to the last named may added here *L. Olga* from Turkestan with small bluish green ovate leaves and small white flowers.

As one of the handsomest and most graceful in its fruiting state of the Hollies with deciduous leaves must be considered *Ilex geniculata* from Japan which is new to cultivation and fruited last year for the first time profusely at the Arboretum. It is a slender-branched shrub with ovate-oblong leaves about two inches long and pea-sized crimson fruits borne in twos or threes or solitary on thread-like pendulous stalks about one inch long; they ripen in August and last until the end of October when the leaves turn yellow. Like other Hollies the species is dioecious and it is therefore necessary to plant staminate together with pistillate plants to insure profuse fruiting.

Alfred Rehder.

Sabbatia chloroides

In August this charming bright pink sabbatia is noticeable in the flower shops of Philadelphia. It is indigenous to the light soils of the New Jersey pine barrens, principally on the margins of ponds or streams. A few thousands planted in your home grounds in a similar situation, and in light, sweet soil, will give a good account of themselves. The flower reminds one of a miniature pink cosmos, and is delicately fragrant. One of the important features that should be carefully noted on this subject as a cut flower is that every one of the unopened buds shown in the illustration opens out nicely in water. Excellent as a cut flower. Habitat: Atlantic States, Massachusetts to Florida. Can be procured from Dreer, or any of the hardy plant dealers advertising in HORTICULTURE.

G. C. Watson

The Propagation of the Phlox

NOTES FROM THE YORK, NEBRASKA, EXPERIMENT STATION

For some years we have been engaged in originating new and hardy varieties. First, we want flowers of superior beauty. Second, we should have a fine head, large and symmetrical. Many phloxes lack this. Third, we must have a plant that will endure continuous wet weather without rusting and blighting. At least one-half of the imported ones are worthless in this respect. Fourth, we want those that can endure the terrible heat of our western plains. Etna, Coquelicot and LeMahdi

cannot endure our hot and dry conditions. Fifth, we want a robust plant that will be a rapid multiplier. When we get a flower like *Fraulein Von Lossburg* it is not very satisfactory to have it grow two years and show but one stem, while *Zouave*, for instance, would give half a dozen or more.

PREPOTENCY IN PLANTS

This trait is prominent with some breeds of animals. The black Galway takes all the horns off his progeny and makes each one a present of a black overcoat.

Some phloxes which yield plenty of seed have the power to impress themselves on their offspring. Most prominent is *Crepuscle*, a flower with immense florets, often larger than a silver dollar, and with such an immense symmetrical head that one in a vase is enough and the petals match so well that the crown seems one complete flower. This is peculiar in the variability of its colors. I saw some growing in cool Colorado and they were dark lavender and not especially attractive. In hot Nebraska mine were snowy white with crimson center, the most imposing of the whole family. But I notice when the weather grows cold and nights are frosty the blossoms are lavender as in Colorado. I never saw a flower which so impressed itself on its neighbors. Even feeble *Coquelicot* responded giving a stronger plant with a larger flower. Crossed with *Richard Wallace* I have my *Arete* which fills all the points of excellence. It is not as tall as *Richard Wallace* for the mother is dwarfish. It has a finer head and larger florets and it is very robust and a rapid multiplier. I often get five divisions from one plant in a year. So if it is equal in beauty to *F. Von Lossburg* it is worth five times as much.

Unfortunately *Crepuscle* is a slow multiplier. This troubled me. Few florists have them and they are high but applying my system of propagation from roots I have now five hundred at least. The process is simple. Here is a strong plant with a large tuft of roots. You do not need so many in planting. Too many roots are in each other's way. For a vigorous plant for next season it is just as well to have short roots. Set a sharp spade in the ground beside the plant. Put it about half way down, then turn it and cut off all the roots. There will be a mass of plucky little fellows left. Will they give up and die? Not much! Rather late in the spring they will come up in a mass as if looking for their mother. Not finding her they go on just the same. There will be about a dozen in one clump. I have had twenty spring up from one tuft of roots. Let them grow one year then plant them out and you find you are doing far better than by the usual method of cuttings. Some times I cut off the roots, put them in earth in the cellar and plant in the spring. If you put one tiny root in a pot you will beat cuttings all out.

Well, a dozen *Crepuscles* planted in a group of fine varieties will make such an impression on them that when you plant the seed in the fall you will find next year you are raising miracles. I have scores of these

seedlings on the way and when you compare them with the imported ones the foreigners look ashamed. Of course not all the seedlings will be worthy of a name, but they go into the mixed lots and many with a better chance and not so badly crowded will ultimate in choice flowers. We are finding some beautifully variegated ones. Some large white with a slight tinting of pink. One dark red with veinings like an iris. In fact we seem to be in wonderland, surprises springing up all around us, and the process is so simple that a child can use it. What a field for women who love flowers, who can call out from the unknown, forms of radiant beauty. We are naming our new creations from the heathen goddesses.

Aleyone, at its best, has petals larger than a dollar; color of the purest white with a ring of crimson and often five dots like stars in place of the ring in center. It is very early and its blooming time is soon over. It is not a rapid multiplier and we cannot increase it as fast as we would like to do. We are increasing *Arete* so rapidly we shall put some on the market soon. *Crepuscle* is dwarfish and rather late and continues to bloom until frost comes. The petals do not shake off as badly as some others. When possible we want to perpetuate these perpetual blooming qualities. The old favorite *Eclairer* has a beautiful red blossom with very large petals. We have known it to resist the blight and bloom radiantly when other kinds were forlorn and ragged with the rust.

By taking the most vigorous and grouping them you are sure of a good combination. We do not try hand polenization. The bees attend to that, giving most satisfactory results. Always sow the seed in the fall, cover lightly. They love the slush and snow of spring and do not mind the frosts. They are among the hardiest of our plants.

York, Nebraska.

C. S. Hammon

Hybrid Calceolarias

(See Cover Illustration.)

Calceolarias are amongst the most interesting and useful plants for greenhouse and conservatory decoration during the late months of spring and early summer, and a whole house devoted to them when in full bloom, as shown in the accompanying photograph, is quite a feature where the glass department is kept for show as well as utility.

Their culture is comparatively easy when their requirements are thoroughly understood. The man in charge of them must be interested in his plants, and he must keep an ever watchful eye on them; a slipshod method of culture will soon result in failure. To obtain large specimens we sow our seed early in July. The seed should be sown in pans filled with light, sandy soil which should be thoroughly soaked before sowing.

Calceolaria Clibrani

During the past two years this new calceolaria has been grown at the Cornell experimental station, and has been found an ideal plant for greenhouse decoration during the late spring and early summer months. A subject of greater decorative value of this genus *Calceolaria* would be difficult to find. The plant is very floriferous, bearing an abundance of beautiful lemon yellow flowers, in graceful cymose inflorescences which droop and almost completely hide the foliage from view. One plant eight months old grown from seed, and finally repotted into a 6-inch pot bore upwards of 800 flowers.

Generally speaking this plant is not so difficult of culture as the herbaceous type, and can be raised either by seeds or cuttings, the latter method of propagation being preferable if large plants are required. The cuttings should be taken in September or October, and will furnish nice specimens by April or May. Seeds sown about the same time will produce flowering plants during May and June.

The plants vary greatly in height when grown from seed, some attaining a height of 4 feet, while others are not more than 18 inches. Great variation also exists among the seedlings, many of the plants producing distinctly mottled leaves. However, by careful selection a very desirable type has evidently been secured, and may be regarded as fixed.

As a decorative plant *C. Clibrani* is well known in Britain, although it is only about two years since its introduction, and from our experience with the plant it is not too much to say that it will find favor wherever grown. It is a charming subject for massing with other plants, and even when arranged in individual batches it is very artistic.

The greatest virtue of the variety probably lies in the

fact that it will stand more heat than the herbaceous type, and this alone ought to make it popular. In view of the above fact we are using the plant extensively for crossing purposes, with the object of producing varieties better adapted to the climate, as some of the types now grown are not altogether satisfactory, which state of affairs is due to the excessive heat of the late spring and early summer months.

Quite recently a correspondent of "Horticulture," Mr. Stewart, remarked to the effect that a more desirable type than the old herbaceous one was needed, a statement with which I entirely agree.

H. J. Moore

The pans should be plunged in sand or ashes in as cool and shady a position as possible; a pit or frame facing the north, if available, is the best. The seed, which is very fine, need not be covered with soil, but a sheet of glass placed over the pan will make the condition suitable for germination.

After germination, the glass should be removed and when the little seedlings are large enough to be handled with a sharp pointed stick they should be transplanted into shallow flats or pans filled with the same sort of soil as used for the seeds. As soon as the plants are large enough they should be potted singly into three inch pots, using for this potting a light fibrous loam with a small amount of dried cow manure and leaf soil. As soon as the roots reach the sides of the pots they must be again repotted and so on until they are into their flowering pots, which for the largest specimens will be nine inches. The soil for the final potting should be one-half good loam, one-fourth dried cow

manure and one-fourth leaf soil, with enough sand to keep the compost open. In potting care should be taken not to firm the soil too much. Up to the time that they begin to show signs of flowering they should be kept in as cool and light a place as possible, a temperature of 35 to 40 suiting them well. Ample room should be given them so as to allow a free circulation of air and the proper development of the leaves. All dead or decaying leaves should be removed and a constant watch should be kept for green fly which is about the only pest that troubles them.

They require at all times an abundance of water but careful attention must be paid to the watering. They must never be allowed to become dry, neither should they be allowed to become waterlogged. When the flowering shoots begin to appear an application every two weeks of weak liquid manure will prove beneficial, and as they require it the flower stems should be supported with neat stakes.

impress, satisfactory or otherwise, on the men and the movements in horticulture of the present day. It is unavoidable that views should differ widely as to the wisdom or value of what was accomplished at Cincinnati, according as individual preferences and judgment found endorsement or repudiation in the decisions reached and the manner in which they were reached. But those whose efforts were doomed to defeat, as well as those who returned home with ambitions gratified and the thrill of approval, will now best serve the Society, which is far greater than any man or possible clique of men, by accepting the verdict in which they were interested and leaving to time, the great evenner-up, the adjustment of all that for the moment appears irreconcilable with what they may have favored as just and wise.

A duty neglected

Everyone having the Society's welfare at heart will no doubt agree that it is most lamentable when, as in the meetings just closed, questions of vital importance to the organization and to the profession, are settled by the vote of from three to five per cent of the members in attendance at the convention—less than a quorum, in fact. Whether decisions thus arrived at fairly represent the views and judgment of the members nobody knows, yet it is also true that those who absented themselves, knowing that important questions were awaiting settlement and liable to be brought up at any time, have forfeited their right to find fault if policies distasteful to them have found approval. The problem of how to insure a creditable audience for a lecturer or a representative number for debate and defining of the Society's position on important questions is as old as the Society itself, and outranked by none which the Executive Board are called upon annually to consider when formulating plans and program. The convention of 1909 certainly reached the limit of transgression in this regard.

The "backbone" of the convention

From the beginning the relative importance of the Trade Exhibition as a feature of the annual Convention has been growing apace. Once of secondary account, it has now come to be the backbone of the event, and it is a debatable question whether or not the exhibition, even in its present dimensions, would not draw together a full attendance of the trade, even if all lectures, papers and discussions were eliminated from the program. The plans looking to the adding of a public horticultural exhibition as an adjunct of all future conventions seem timely and eminently wise. The great horticultural exhibition at Music Hall, Boston, on the occasion of the visit of the S. A. F. to that city in 1890 is frequently referred to as one of the most attractive and instructive features ever provided at a convention. The time seems now to have come when such an adjunct is possible at every convention. The bright intellects in the trade are coming to realize the tremendous influence that may be exerted with the public through such a means and how much we have been losing through failing to provide such an attraction to enthuse and enlighten the people of the convention city as to the purposes of our National Society. We hope that the powers that be will make provisions for such an accessory next year.

Now
 all together
 Events have moved rapidly and with far-reaching influence since our last chat with our readers. The second Cincinnati convention of the S. A. F. so long looked forward to as an occasion of great interest and moment, has already been written into history and has left its

MEETING OF THE AMERICAN ROSE SOCIETY IN CINCINNATI.

At the Convention of the Society of American Florists there was a meeting of the American Rose Society on Thursday afternoon, August 19, in Music Hall.

President Poehlmann called the meeting to order at 3.45 and laid before the meeting several matters of importance. This was the first meeting of the Executive Committee since the spring exhibition held in Buffalo. Treasurer May advised that the rate of interest had been cut down upon the invested fund from 4 to 3 per cent and in accordance with the by-laws of the Society, Article three, section five, and Article five, section three, requested advisement as to what he should do with the fund which amounted to \$300 and the special Hubbard fund, \$250. The matter was discussed from various sides and a letter from Spencer Trask & Co., of New York City, recommending three bonds as investment was read, but it was moved and seconded that the treasurer be directed to invest the permanent fund in his hands in New York Savings Banks drawing 4 per cent interest, and that the same be deposited in the name of the American Rose Society, and in the case of withdrawal the order should be signed by the treasurer and countersigned by both the president and secretary of the Society. The recommendation of the Committee of Judges at the last exhibition in regard to staging was adopted, the same to be added to the permanent rules. A letter was read from Peter Bisset of Washington, in regard to two growths on cut roses for exhibition. This matter was discussed and it was resolved that the sentence, "All cut roses (excepting Killarney) in the competitive classes must be from a single growth of the current season."

F. R. Pierson stated that for the coming exhibition to be held in the American Museum of Natural History at 77th street and Central Park West, there would be every accommodation for the finest exhibition, and that the exhibitors and all interested could rely upon a great crowd of visitors; that there would be no charge for admission and that the Horticultural Society would do all in its power to make everything interesting. The preliminary schedule as reported by the Schedule Committee, which had been appointed by President Poehlmann, was circulated.

The number of special prizes has been taken up and efforts will be made to swell them to a large extent. It was reported that the Society had no medals. A letter from the director of the United States Mint at Philadelphia was read and the statement made that only three silver medals and three bronze ones had been struck. Upon the matter of medals, the secretary reported a case where seventy-three school children had joined a society for making home gardens and that a colored washerwoman, while not a member of the "Home Garden Brigade" had taken care of her front yard so well that it was a marvel. On each side of the fence was a row of roses and also three or four bushes in the grass plot and as a matter of encouragement to amateur growers of roses

everywhere, the secretary asked that the Society would grant this Mrs. L. Lefevere a medal. Mr. Heacock of Wyncote, Pa., inquired particularly about the conditions and stated that he believed that the Rose Society could do no better work than to recognize such cases; that the Rose Society was a Society for amateurs and that we wanted to encourage that kind of work everywhere and moved that a silver medal be given to Mrs. Lefevere; this was unanimously seconded. Upon motion of Prof. Cowell it was ordered that three silver medals and six bronze medals be ordered from the Mint.

The matter of annual bulletin was taken up and the same will be published at the end of the year and 550 were directed to be printed if the secretary received support in the way of advertisements for the publication, to increase the number as conditions may warrant.

The sense of the Society is that every effort should be made to interest amateurs generally and to provide especially for out-of-door roses and as far as possible keep in touch with every member. Several of the members present subscribed for one page advertisement in the next edition of the Bulletin.

FRANK R. PIERSON,

President-elect, Society of American Florists and Ornamental Horticulturists.

We were pleased to be able to present as a cover illustration for our issue of last week, the portrait of this ceaselessly busy man who, having made a signal success of his own business and having given brilliant evidence of his cleverness in handling and solving problems of national importance for the benefit of the trade at large, has now been selected as the standard bearer of the great national society for the coming year. Mr. Pierson has before him the grandest opportunity to make his administration a record breaker for aggressive usefulness on broad lines, for the time is ripe for a big movement that will mark an era in American horticulture and it is his duty and privilege to assume the leadership.

Mr. Pierson had his training in a good school, the house of Peter Henderson & Co., and Peter Henderson, always observant and shrewd, was often heard to predict that the young man would make his mark in the profession. His start at Tarrytown, where his business is still located, was a modest one, some thirty years ago. But it grew rapidly, and in a few years the additional establishment at Scarborough, N. Y., was inaugurated and now ranks among the great show places of the country with over a quarter million square feet of ground covered with glass houses of the most modern type. The chrysanthemum, carnation and fern literature of the past ten years is punctuated with the name of Pierson, as every reader of these lines knows, and among the introductions which have been disseminated under his name we do not recall one which has not "made good." The S. A. F. has again shown excellent judgment in the man it has honored with the highest gift in its power.

A PEONY INQUIRY FROM NEW ZEALAND.

Our Philadelphia correspondent, G. C. Watson, is in receipt of the following letter from Ivar C. Asplund, Canley Park, Rahotee, Taranaki, New Zealand:

I have the honor to beg the favor of copies of the Annual Reports or Year Books of the American Peony Society for the years from 1902 to 1909 inclusive; and copies of the yearly proceedings of the Conventions of the Society of American Florists from 1902 to 1909 inclusive.

Kindly note me as to amount of postage, etc., etc.

May I also ask, if it is possible, that you will also favor me with catalogs of noted breeders of the Peony, for which I shall be extremely thankful.

The above submitted to Bertrand H. Farr of Reading, Pa., the president of the Peony Society, he replies as follows:

I beg to acknowledge the receipt of your favor of August 16th with enclosed letter from Ivar C. Asplund, Taranaki, New Zealand.

The publications of the American Peony Society to date are as follows: A Check List containing the names of every var. of Peonies so far as known, that is to be found in catalogues at the present time, giving the name of introducer and date, where possible, with references to all the literature bearing on each variety so far as known. This list contains about 2700 names at the present time and forms the basis upon which the Society has begun its work, in connection with the Test Plot at Cornell University, where nearly 1000 of these varieties are growing side by side for the purpose of comparison, having been donated by all the prominent growers of this country and Europe.

The second publication was the beginning of the official catalogue of the society, containing a history of the Peony by J. Elliot Coit, Ph. D., Professor of Horticulture at Agricultural Experiment Station, Tucson, Arizona, with articles on cultivation, diseases, etc., and its classification, with a descriptive list of about 100 varieties, following up the work done this season. Another bulletin will be gotten out this fall, giving detailed descriptions of about 275 additional varieties. In addition there was published last spring the official record of the doings of the Society from its beginning until the present time, a period of about 6 years.

All of these publications are free to each member of the Society, the membership to which is \$5.00 with annual dues of \$3 per year. The price of the Check List was originally fixed at \$5 to non-members. This price was reduced at the last meeting to \$2.50. The Peony bulletin, issued by Cornell University can be obtained free by any resident of the State of New York, or by any member of the Peony Society, as this bulletin was published by the New York State Experiment Station of the College of Agriculture. Non-residents of New York can obtain it by applying to Prof. John Craig of Cornell University, but am unable to say what the charge will be.

The following are the names and addresses of those who are at the present time growing seedling Peonies, so far as I know: T. C. Thurlow & Son, West Newbury, Mass.; George H. Hollis, South Weymouth, Mass.; E. J. Shaylor, Wellesley Farms, Mass.; J. F. Rosenfield, West Point, Neb.; C. S. Harrison, York, Neb.; and O. F. Brand & Son, Fairbault, Minn.

Would it not be advisable for all those interested in Peonies to join the American Peony Society, and help this work along, as I feel sure we are established on a sound basis and will accomplish results.

The above information being of interest to many of our readers besides our New Zealand friend, we take pleasure in publishing same, and would ask the gentlemen mentioned by Mr. Farr and also other peony growers who may have peony catalogues that are free, to send same to the addresses given. The secretary of the S. A. F. will no doubt inform the inquirer if there be any way of getting the reports of that society from 1902 to 1909.

SOCIETY OF AMERICAN FLORISTS AND ORNAMENTAL HORTICULTURISTS

Convention Report Completed

THURSDAY EVENING.

Our report of the proceedings as published last week carried us up to Thursday noon. Thursday afternoon was devoted to the bowling and shooting tournaments, accounts of which will be found in another column. The evening session of the Society opened with the official announcement of the result of the balloting. H. A. Bundy made a motion that the election of his competitor for the secretaryship, Mr. Dorner, be made unanimous and this was done.

President-elect Pierson being called upon was given an ovation. He said that he had always been optimistic about the future of the S. A. F. We had now come to a milestone and each should feel his own responsibility. It is our duty to justify the giving of a charter to us by Congress. He asked for the help of all in making the meeting at Rochester a great event and expressed the hope that many now present might be here again when the Society shall celebrate its golden jubilee at Cincinnati.

Secretary-elect Dorner expressed his thanks for the honor conferred and promised to do credit to the name he bears, hoping to keep up to the standard of the office in the past and to contribute in every way possible to further the interests of the organization.

Ex-President E. G. Hill was then called upon to act as secretary for the anniversary exercises planned for the evening. He called the roll of the past presidents as follows: John Thorpe—Gone. Mr. Hill spoke of him as a central figure in the birth of the Society and paid a kindly tribute to his genius and heart. Robert Craig.—A letter from Mr. Craig expressing regret at inability to be present was read. Hopeful reference was made to the coming National Flower Show at Boston. E. G. Hill.—Mr. Hill made an entertaining speech, told stories and hoped that the lives of his hearers might be a blessing to humanity. J. N. May.—A letter expressing kindly wishes was read from Mr. May. J. M. Jordan.—Gone. J. D. Carmody spoke of Mr. Jordan as a grand president of a grand Society, whose great ambition was to make everybody happy. M. H. Norton.—W. J. Stewart read a letter from Mr. Norton, prefacing it with some remarks as to that gentleman's high standing in the esteem and love of the Massachusetts members. James Dean.—Mr. Hill spoke of Mr. Dean, of his loyalty and faithful adherence to all the things for which this Society stands. W. R. Smith.—Present. J. T. Anthony.—Gone. J. C. Vaughan spoke of Mr. Anthony as a man who had

been greatly beloved of all his florist friends in Chicago. Edwin Lonsdale.—Jos. Heacock responded briefly for Mr. Lonsdale. William Scott.—Gone. J. F. Cowell spoke of his late fellow-townsmen as a man better known, probably, to the rank and file of the florists than any other man. He was a man of pronounced personality and great magnetism and as a writer had few equals. Adam Graham.—Present. W. F. Gude.—Present. W. N. Rudd.—Present. Edmund M. Wood.—Gone. W. J. Stewart responded for his friend, telling of the love in which he had been held, his great insight into the future of the rose-growing industry and the loyal work he had done for the Society. Patrick O'Mara.—A letter was presented from Mr. O'Mara, who had been obliged to leave earlier in the day. He referred eloquently to the wonderful advancement in our business, due primarily to the S. A. F. John Burton.—Present. Philip Breitmeyer.—Present. W. F. Kasting.—Present. W. J. Stewart.—Present. F. H. Traendly.—Present.

A song by Miss Edith Sterling and piano solo by Miss Alma Sterling were interspersed. E. G. Hill read his paper (published last week) on the first meeting at Cincinnati and J. C. Vaughan spoke forcibly of the work and accomplishments of the S. A. F. during its 25 years' existence and how much it had failed to achieve which had been in its power. W. R. Smith spoke beautifully of the friendships he had made through his association with the Society and how dear are the memories connected with the annual meetings. B. P. Critchell, who was a leading figure in the first convention, spoke briefly in response to a vociferous reception and declared that if the Society had done nothing except what was evidenced in the great exhibition now in progress it had done enough to justify its 25 years' life. The singing of "Auld Lang Syne" closed this memorable meeting and practically finished the convention, although a day of pleasure was still in prospect.

FRIDAY.

Friday was Cincinnati Florists' Day. Promptly at 11 a. m. the members with their families and friends to the number of ten or twelve hundred on board the big river steamer Island Queen started on a delightful trip up the Ohio river to the amusement resort known as Coney Island. The committee, in the person of J. A. Peterson, was indefatigable in the effort to make everybody happy. A genuine Kentucky barbecue—something entirely new to most of the visitors—was enjoyed and in the evening a grand display of fireworks, specially designed, brought this well-

conducted affair to a close. The committee on final resolutions, W. J. Stewart and Judge W. J. Vesey handed in an appreciative report on behalf of the Society, which will in due time, no doubt, be made public.

THE EXHIBITION.

As stated in our issue of last week the trade exhibition was of unprecedented magnitude and diversity. The great size of the exhibition hall permitted the use of abundant space for aisles and moving about, and there was a preparedness at the beginning and a comfortableness throughout which marked Superintendent Murphy as the man of all men to fill this difficult position. When needed he was always easily found and everything moved as smoothly as if it had been a periodical experience with him. The placing of the florists' supply department on the upper floor had its advantages and its disadvantages. Some exhibitors complained that it isolated them and that business was lost thereby. Others said it pleased them better than to be down among the bustle and push and afforded them better opportunity to talk business quietly and effectively with their customers. As a rule, the exhibitors in all departments admitted doing a good present or prospective business and practically all exhibits were sold long before the close of the convention. The plant department was a triumph. Such displays as those of Julius Roehrs Co., F. R. Pierson Co., Bobbink & Atkins, H. A. Dreer, Robert Craig Co. and J. A. Peterson are individually a prime attraction and together would make a notable horticultural exhibition in themselves. The bulb displays such as Michell's, Boddington's and Pierson's, were in quality and arrangement the best we have ever seen at one of these exhibitions. The table of American grown bulbs was especially a centre of attraction. The average retail florist has no conception of the wealth of beautiful material that is spread out for inspection in the florists' supply department on these occasions. Education in modern floral art, suggestiveness of inestimable value and a new and greatly enlarged appreciation of the importance of his business are a part of the benefits coming to the retail dealer who is enterprising enough to present himself at the S. A. F. convention, and he who goes once is pretty sure to go again and again. To enumerate the almost endless list of new ideas sticking out all over such big displays as those of Bayersdorfer, Pennock-Meehan Company, Reed & Keller, M. Rice & Co., and other well-

known supply houses, would take many pages of this paper. The pottery department is another department full of inducement for the retailer who has the trade of a discriminating public. The greenhouse building and equipment section of the show was a potent attraction to the grower and he who would be up-to-date in his outfit takes the proper bearings when he attends the S. A. F. Trade Exhibition and inspects for himself the advanced ideas which are here placed at his disposal.

LIST OF EXHIBITORS.

The Advance Co., Richmond, Ind., ventilating machinery.
 American Florist Co., Chicago, sample copies of American Florist.
 American Blower Co., Detroit, Mich., steam traps.
 Chas. Apelt, Comfort, Tex., armadillo baskets.
 Chas. D. Ball, Philadelphia, Pa., palms.
 Lemuel Ball, Philadelphia, Pa., palms.
 L. Baumann, Chicago, artificial flowers.
 H. Bayersdorfer & Co., Philadelphia, Pa., florists' supplies. The finest display ever put up; elegantly arranged.
 Ball & Betz, Cincinnati, O., wire designs; a very extensive line well made and artistic.
 E. A. Beaven, Evergreen, Ala., sheet moss.
 A. Bell, Connersville, Ind., carnation supports.
 Z. D. Blackstone, Washington, D. C., photographs of float decorations.
 Bobbink & Atkins, Rutherford, N. J., a grand collection of specimen evergreens.
 A. T. Boddington, New York, "Quality" bulbs and sweet peas.
 Bradford Belting Co., Cincinnati, O., hose.
 A. C. Brown Springfield, Ill., carnations.
 Camp Conduit Co., Cleveland, O., tile benches.
 W. W. Castle Co., Boston, Mass., Automatic Circulator.
 John Lewis Childs, Floral Park, N. Y., gladioli.
 Robt. Craig Co., Philadelphia, Pa., decorative plants. A grand showing of crotons.
 Chas. E. Critchell, Cincinnati, O., Artificial Poinsettias.
 Cushman Gladiolus Co., Sylvania, O., gladioli.
 A. T. De La Mare Printing & Publishing Co., New York. A line of book publications and Florists' Exchange.
 Detroit Flower Pot Mfg. Co., Detroit, Mich., flower pots.
 A. Dietsch Co., Chicago, greenhouse building materials.
 Henry A. Dreer Co., Philadelphia, Pa., bulbs, plants and sundries.
 Eagle Machine Works, Richmond, Ind., carnation support.

BODDINGTON'S BULB EXHIBIT AT CINCINNATI

Chas. Ebele, New Orleans, La., palms.
 W. H. Elverson Pottery Co., New Brighton, Pa., pots.
 Fernwood Nurseries, Stamford, Conn., catalogue, etc., of choice nursery stock.
 Foley Mfg. Co., Chicago, greenhouse appliances and construction.
 Chas. H. Fox, Philadelphia, Pa., photographs.
 Gillett & Ohmer, Cincinnati, O., florists supplies.
 Glen Mary Fish Farm, Amelia, O., gold fish.
 Glenny, Wm., Glass Co., Cincinnati, O., glass.
 Benjamin Hammond, Fishkill-on-Hudson, N. Y., putty and insecticides.
 Adam Heim & Son Co., Connersville, Ind., carnation support.
 Herendeen Mfg. Co., Geneva, N. Y., boilers.
 A. Herrmann, New York, florists' supplies.
 Hinode & Dauch Paper Co., Springfield, O., boxes.
 Horticulture Publishing Co., Boston, sample copies of Horticulture.
 Hubert Bulb Co. Portsmouth, Va., bulbs.
 E. H. Hunt, Chicago, supplies and tobacco products.
 Ionia Pottery Co., Ionia, Mich., flower pots.
 Thomas Jackson, Covington, Ky., alien manihara.
 Jackson & Perkins, Newark, N. Y., nursery stock.

Keller Pottery Co., Norristown, Pa., pots.
 Robt. Kift, Philadelphia, Pa., berry globes and adjustable vases.
 King Construction Co., N. Tonawanda, N. Y., greenhouse construction, model and material.
 Kroeschell Bros. Co., Chicago, boilers.
 Lager & Hurrell, Summit, N. J., orchids, established and fresh imported.
 Lion & Co., New York, ribbons, chenille, etc.
 Daniel B. Long Buffalo, N. Y., floral photos.
 Madison Basketcraft Co., Madison, O., willow baskets.
 W. A. Manda, South Orange, N. J., plants, including many fine novelties.
 H. D. Mann Co., Syracuse, N. Y., ribbon, chiffon, etc.
 McCaslin Bros., Zanesville, O., concrete bench.
 O. A. Muller, Ambler, Pa., carnation support.
 J. M. McCullough's Sons Co., Cincinnati, O., bulbs and plants.
 McFarland Publicity Service, Harrisburg, Pa., advertising literature.
 Henry F. Michell Co., Philadelphia, Pa., bulbs and supplies; very comprehensive.
 Wm. Moll, Cleveland, O., pipe clamp.
 J. C. Moninger Co., Chicago, building material.
 Morehead Mfg. Co., Detroit, Mich., steam traps.
 Muncie Floral Co., Muncie, Ind., literature.
 J. D. Murray, Springfield, O., boxes.
 J. G. Neidinger, Philadelphia, Pa., florists' supplies.
 Ohio Box & Board Co., Springfield, O., florists' shipping and mailing boxes.
 Ordenez Bros., Madison, N. J., orchid plants, imported and established.
 Pennock-Meehan Co., Philadelphia, Pa., ribbons and supplies; a fine line.
 J. A. Peterson, Cincinnati, O., decorative plants; Lorraine Begonias, etc.
 J. D. Pruessner, Galveston, Tex., Neprolepis Pruessneri.
 F. R. Pierson Co., Tarrytown, N. Y., bulbs and plants; large collection; high grade.
 I. L. Pillsbury, Galesburg, Ill., carnation staple.
 Quaker City Machine Co., Richmond, Ind., ventilating machines.
 Radford Pottery Co., Clarksburg, W. Va., pots.
 A. L. Randall Co., Chicago, florists' supplies.
 Reed & Keller, New York, florists' supplies; very extensive, including many new things.
 M. Rice & Co., Philadelphia, Pa., ribbons and supplies.
 Roseville Pottery Co., Zanesville, O., pots.
 Julius Roehrs Co., Rutherford, N. J., decorative plants.
 D. Rusconi, Cincinnati, O., bulbs, lily plants, etc.
 Schloss Bros., New York, ribbons.
 Shaw Fern Co., Pittsfield, Mass., cut ferns.
 Springfield Clay Mfg. Co., Springfield, O., fern pots and flower pots.

KROESCHELL'S BOILER EXHIBIT AT CINCINNATI

Springfield Floral Co., Springfield, O.,
Nephrolepis Springfield.

E. E. Stewart, Rives Junction, Mich.,
gladioli.

Standard Pump & Engine Co., Cleveland,
O., photographs of their specialties.

Storrs & Harrison Co., Painesville, O.,
nursery stock.

Thompson & Norris Co., Brooklyn, N. Y.,
shipping cases.

Underwood Machine Co., Cincinnati, O.,
pot washing machine.

Vaughan's Seed Store, Chicago, bulbs
and plants.

Vick & Hill Co., Rochester, N. Y. A
remarkable display of asters, comprising
fifty-one distinct varieties.

James Vicks' Sons, Rochester. A bril-
liant display of asters of the highest type.

Wertheimer Bros., New York, ribbons.

Winterson's Seed Store, Chicago, bulbs.

R. G. Wilson, Brooklyn, N. Y., corsage
bouquet holder.

Wilson Plant Oil & Fertilizer Co. An
ingenious and very practical Pot Washing
Machine; Tub Carrying Device; Hose;
Plant Oil, etc.

Wolf Machine Co., Dayton, O., ventilat-
ing apparatus and sifting and dumping
device.

Zanesville Stoneware Co., Zanesville, O.,
green tinted florists' vases, etc.

CONVENTION NOTES.

John Evans, the veteran from Rich-
mond, handled a golden chain contin-
uously in the exhibition hall. His de-
vices were all gilded and he had an
interesting audience about him all the
time, listening to his demonstration of
how to ventilate.

A party of visitors went to J. A.
Peterson's greenhouses at Westwood,
early Wednesday morning and feasted
their eyes on Farleyense, Lorraines
and dracaenas of high degree. Mr.
Peterson estimated that no less than
300 visited his place that day. Two
special cars were kept busy.

The happiest surprise of the conven-
tion was the unexpected presence there
of the Society's best beloved friend
and ex-president, Wm. R. Smith, fully
restored to his old-time vigor. His
talk on the nobility of the gardener's
calling at the meeting on Thursday
afternoon was easily the gem of all
the addresses the Society has ever lis-
tened to.

Vice-President Miller is right. The
way to get new members is to go after
them and make a personal effort. Any
state vice-president who will do that
with the same persistency as though it
was his own business will soon be able
to make a creditable showing for his
state. The vice-president who is not
disposed to do so should send in his
resignation.

The omission of the customary open-
ing addresses of welcome and response
was commented on quite generally, a
few matter-of-fact members approving
the immediate getting down to busi-
ness, but most of them expressing re-
gret that this picturesque and inspir-
ing feature had been cut out of the
program. The organ volunteers which
preceded each session were much en-
joyed by the music lovers.

Nephrolepis viridissima—not N. ele-
gantissima as stated in our report last
week, was the fern winning honorable
mention in the exhibit of F. R. Pierson
Co. N. viridissima is a sport from N.
superbissima. The frond is stiff, al-
most plain and of a remarkably bright
and glossy green. N. elegantissima

compacta as shown in this group, was
greatly admired. More symmetrical
and finely finished plants could not
be imagined.

The setting apart of one day on
which the public might be admitted to
the trade exhibition was an excellent
move. It left the hall free for the
transaction of business during the bal-
ance of the time and turned in quite
a good sum of money to the local club
from the sale of tickets. The rule pro-
hibiting sales at retail by exhibitors
also contributed materially to the cor-
diality which existed throughout be-
tween all classes, local and visitors.

"This society holds a charter of un-
precedented character and dignity in
the United States. Why should not
all horticultural interests appreciate it
and make use of it? The historian will
see in the horticultural trade press of
today a soul elevating agency that no
church can equal. Hold up your head.
Take pride in your work, pride in
your profession. The S. A. F. has
nothing in its history to be ashamed
of."

(Extract from speech of Wm. R. Smith.)

On Wednesday afternoon, those
ladies and others not desiring to at-

F. W. VICK

Vice-President Elect, S. A. F. & O. H.

tend the bowling contest, were given
a trolley ride to points of interest
about Cincinnati. Eight cars, decora-
ted with gladioli were required to
carry the party of about 400 people.
Among the interesting places pointed
out on the way were the Rookwood
Pottery, Art Museum, reservoir, St.
Johns Park, Spring Grove Cemetery,
Burnet Woods, Public Library and
Garfield Park and statue.

In our humble opinion, the armadillo
baskets which have had a run for the
past year or two are the most repul-
sive things ever offered to the florist
trade. There is surely enough appro-
priate and beautiful material from
which plant and flower baskets may
be constructed in endless variety with-
out encouraging the slaughter of these
harmless creatures, which until now

have been permitted to live unmolested
and fill their place in Nature's econ-
omy as insect eaters. The florist
should be the last man to give his
support to such business.

FRED W. VICK.

Vice-President of the S. A. F. and O. H.

F. W. Vick is a nephew of the late
James Vick and a member of the Vick
& Hill Company of Rochester, N. Y.
The mail order trade and the aster
seed business are the specialties of
the Vick & Hill Company and they
have achieved a wide popularity for
these goods. Mr. Vick is president of
the Rochester Commercial Florists'
Association, the members of which
hold him in high esteem and he can
be counted on as an influential factor
in making the convention at Roches-
ter, N. Y., next year a worthy succe-
sor of its forerunners.

THE SHOOTING CONTEST.

This interesting event was held at
the grounds of the Northern Kentucky
Gun Club, Thursday afternoon, the
members of the Society of American
Florists being the guests of the club.
There were five-men team events, sin-
gles and doubles, and prizes were of-
fered as follows: To the man break-
ing the greatest number of birds in all
events, a 16-gauge repeating shotgun,
offered by J. Charles McCullough; five-
men team prize, diamond stickpin for
each man on winning team.

Singles—Twenty-five birds; 1st prize,
silver cup, offered by Charles Esberger,
of Cincinnati; 2d prize, 15-shot repeat-
ing 22-cal. rifle, offered by Evans Bros.
Hardware Company, Cincinnati; 3d
prize, safety razor, offered by the Pick-
ering Hardware Company.

Doubles—Twenty-four birds; 1st
prize, gun case; 2d prize, fishing rod;
Kuhn, of Cincinnati.

The winners and their scores are
appended:

Event 1, 25 targets—1st, Altlick of
Dayton, 24, silver cup; 2d, Brown,
Springfield, 22, rifle; 3d, Rasmussen,
16, razor.

Event 2, 12 pair—1st, Brown, gun
case; 2d, Rogers, fishing rod; 3d, Al-
tick, cane.

Team Score: S. A. F. team—Altlick
22, Brown 23, Rogers 22, Gardner 15,
Shaw, 19; total 101. Northern Ken-
tucky team—Woodbury 24, Damonon
24, Keefe 23, Miss Astherr 22, Gonod
19; total 112. Altlick and Brown were
tied for high average with 37 out of
49. In the shoot-off for the gun, at
ten targets, Altlick won with 10 straight,
Brown getting 9.

LADIES' BOWLING.

Mrs. George Shaffer of Washington
was the winner of the beautiful Rein-
berg cup and the prizes for highest
single game and greatest number of
strikes. Mrs. C. McKellar of Chicago
was second, winning the Darling
cup and the prize for greatest number
of spares. The other contestants
achieving glory in greater or less de-
gree were Mrs. Meinhardt, St. Louis;
Mrs. Critchell, Cincinnati; Mrs. Kill,
Chicago; Miss Pfeiffer, Fort Thomas,
Ky.; Mrs. Winterson, Chicago; Mrs.
Guy, Belleville, Ill.; Mrs. Herr, Lan-
caster, Pa.; Miss Meinhardt, St. Louis.

THE BOWLING TOURNAMENT

This great annual occurring among the sporting enthusiasts of the S. A. took place at the Grand Alleys, Cincinnati, on Thursday afternoon. It was, as usual, late at night before the contests were finished.

There were more than 40 prizes ranging from diamond medals to safety razors. The Baltimore team captured the first prize, with Chicago second and Cincinnati third. There were but 32 pins difference between the three teams. Charley Graham, of Cleveland, won the diamond medal for the highest individual score. The Chicago team made the high score in any of three games; Baltimore in the first two games. Graham, of Cleveland, won the prize for the greatest number of strikes, and Gibson, of Philadelphia, won the prize for the greatest number of spares. The five highest men in the singles were Kasting, 360; McKellar, 351; Washland, 350; Shaffer, 344; and Oleson, 342. James H. Stevens, of Chicago, the crack bowler of the S. A. F., was matched for a series of 11 games with Bob Plumber, of Cincinnati, for \$500 a side. The contest was very close and attracted a great deal of attention. The florists were not slow in backing their champion, and the public was just as eager to stake its money on Plumber. This is the second contest between the two men, the other one having been played in Chicago about a year ago. Plumber won the series.

Report of Legislative Committee Concerning Ice Charges.

At the meeting held at Niagara Falls last year, the matter of charges for ice in transportation of cut flowers was transferred to your committee and the case particularly brought up was that of Mr. Edward Reid of Philadel-

American Grown Roses

BEDFORD, MASS.

phia. We took the matter up with the leading express companies and it transpired that the American Express was the leading company in this work, but that fifteen different companies were working under one official express classification of graduated charges and that what one company did the others would be obliged to follow. In the special provisions for allowances and variations, the clause known as number 8, General Specials, provided for seventy-eight articles, all of which received an allowance from the gross weight of 25 per cent. between March 1st and November 3rd, when it is necessary to use ice for preservation and it is used for that purpose only. In this list are thirteen different articles pertaining to plants, but cut flowers are not allowed.

The superintendent of the American Express Co., J. F. Christy, said that in taking this matter up, it touched so many interests he advised an interview with the representative of this company and the result was that the entire matter was laid before the General Manager, who went over the matter with care and expressed willingness to do anything that was reasonable to meet the demands of their patrons. J. D. Ludlow, the Traffic Manager, of Wells, Fargo & Co., stated that they

OVER FIFTY ACRES IN CHOICE EVERGREENS

The Framingham Nurseries offer a large and select stock of the following varieties of

EVERGREENS

Abies Balsamea, Concolor, and Fraseri; Junipers of various varieties; Picea Alta, Engelmanni, Excelsa, Pungens glauca, and Pungens Kosteri; Pinus Excelsa, Mugho, and Strobus; Pseudo Tsuga Douglasii; Retinosporas, assorted; hardy Taxus, such as Canadensis, Cuspidata, and Brevifolia; Thuja Occidentalis, Globosa, Peabody's Golden, Pyramidalis, and Siberica; Tsuga Canadensis, Hemlock Spruce, a large and fine lot.

We have some fine specimens of Abies concolor, Picea pungens, and Pinus Strobus. Most of the above varieties can be safely planted from the middle of August until the middle of September. A personal selection is always advisable. Boston and Worcester Electricians pass our grounds.

--	----------

JOSEPH HEACOCK CO. WYNCOTE, PA.

were unable to do anything more than what the official classifications called for, unless that classification was changed, and stated that, "cut flowers are charged merchandise rates and I think that you will agree with me, that when we accept shipments of this character at the same rates for which we accept and transport ordinary merchandise, we are making a very liberal classification." Following this the American Express Traffic Department sent out letters to the agents, requesting reports as to the quantity of shipments and the average weight of the same. We asked for reports from shippers all over the country as far as we could through the trade papers and sent out a number of letters.

The point where there seemed to be the most interest in the matter was Chicago and several large shippers sent on their opinion that it was desirable to get the concession on the gross weight. These letters were laid before the General Traffic Manager, Mr. Bradley, who advised that he had not supposed that such shipments were being made to any extent, where ice was used and said, "I will at once investigate the question of ice with shipments of flowers. I will make inquiry of our agents at the principal cities and will give it full consideration." During this investigation we received from New York City particular objection to the charge for returned empties and to this we were advised, "that the classification always provided that returned empties must be delivered at the depot by the shipper and taken from the depot by the consignee. We know that our agents did not live up to the classifications in this particular and that they had been picking up and delivering empties for certain patrons. Agents at other points did not do so for any patrons and it constituted a discrimination which we are obliged to overcome by putting into effect a classification providing for an additional charge, where pick up and delivery service was rendered, and furthermore we must not lose sight either of the transportation and delivery of cut flowers in the extreme cold or extreme heat calling for extra services in many cases."

The outcome of the investigation was as follows: While there may be shipments where the ice weight could properly be allowed, under the present Interstate Commerce Law it was not in the power of the express company to make any special allowance unless it was done equally to one and every shipment. The quantity of small packages which go from the distributing centers, contained more or less ice, is large and the charges on such small packages are the minimum. On the other hand, in the case of commodities, particularly fish, where the ice allowance amounted to considerable, the weight for which they paid was greater in every instance than any ordinary shipment of flowers and the delivery of flowers outside the shipping market, entailed usually additional cost for delivery so that the companies could not afford to modify.

After this conference with the traffic people, I conferred with a competent legal adviser as to what show there would be to take this matter before the Interstate Commerce Commission for a revision.

The Society of American Florists placed at the command of this committee \$100 for expenses. This has not been touched. The advice that I received was that the facts in the case as it stood would not be strong enough to carry before the Interstate Commerce Committee, because the Express Companies' statement of the case would receive equal weight with that of the shipper and unless a case strong enough could be made showing that injustice was done, the point could hardly be conceded.

These facts were made known and circulated through the trade papers and Messrs. Patrick Welch of Boston, and Alfred Langjahr of New York, both for their respective localities, were much interested in trying to bring about pressure that would secure desired results for both the New York and Boston interests, but as far as the placing of ice allowance upon the bases that the General Specials are, a case will have to be presented showing specific shipments and the average quantity of ice used for the country generally, if the schedules now in use by the companies named are to be modified. That data I was unable to obtain.

Annual Report of the Maryland State
Vice-President to the S. A. F. and
O. H. Convention at Cincinnati,
August 17, 1909.

I would judge by the reliable thermometer "Building Activity," that the kind hand of Providence has been liberal in handing out prosperity to the florist of Maryland, as I understand that there is more new glass going up this season than ever before, that it is being done in a very substantial manner, that nothing but the very best material will do, and that the most modern ideas in scientific construction are the order of the day. There has been no failure of any account as far as we can learn among the craft anywhere in the state this year.

The Florist Exchange, which is the main distributing point of the wholesale growers, reports business on a steady increase with bright prospect for the future, on account of out-of-town trade which it is developing, and reports that considerable new glass will be added to its source of supply.

We notice with a good deal of satisfaction the inclination of our largest growers to endeavor to produce the very highest grade of stock—that is, quality in preference to quantity. Several new retail stores have opened up showing that there are still those who have faith in the business, and yet with the new ones in the field the old stands are still on the job.

There seems to have been very little cause for complaint in regard to the spring bedding trade, all good stock apparently being cleaned out early. Geraniums were scarce before the end of the season, a condition caused no doubt by the better class that is being grown.

The Florists' and Gardeners' Club is in prosperous condition. During the past winter we had several very interesting and instructive lectures by the Professors from the Agricultural and Experimental Station, also a very

enjoyable illustrated lecture by Mr. J. O. Thilow of Dreer's, Philadelphia, on the Yellowstone Park. At nearly every meeting there have been very meritorious exhibits of flowers and plants, especially on Geranium Night when R. Vincent, Jr. and Sons Co. exhibited some 200 varieties, and on Carnation Night when many of the newer varieties were exhibited as well as some very fine seedlings, among them one by Mr. Thaw, which he has grown for two years and will offer this fall. It is brighter in color, large and fuller than Harlowarden.

The annual meeting and exhibition of the Maryland State Horticultural Society with which many of the florists are affiliated, was a revelation of what the state can produce. The display of horticultural products of every kind which practically filled the 50,000 or more square feet of available space in the great hall of the Fifth Regiment Armory, ranked as first-class among all exhibits of like nature in the United States.

The State Agricultural College and Experiment Station with their efficient staff of officers have done very effective work during the past year in working out difficult problems of plant diseases and injurious insects and also in the dissemination of useful bulletins covering every department of the work and investigation.

As far as I can learn, notwithstanding the dry summer, carnation plants are looking generally better than a year ago. There have been fewer roses carried over this year than last, therefore necessitating the planting of considerably more young stock, which is reported as looking well.

The seedmen report a very prosperous season, both for the counter trade and mail order business. Through the opening up of direct steamship communication with the south, Baltimore will have unequalled opportunity to become a great distributing center for seed and farm supplies. One house reports selling over 275 carloads of seed during the past season.

There is at present considerable suburban development around Baltimore and hundreds of new country residences are being built, creating a very perceptible demand for florist and nursery stock.

R. A. VINCENT.

SEED TRADE.

American Seed Trade Association.

The report of the proceedings of the 27th annual convention, held at Niagara Falls, Ont., on June 22-24, 1909, has just been issued. It gives a very full and detailed account of the discussions, committee reports, papers and addresses presented and other matters of great value to the seed trade. It is well printed and a fine portrait of President W. S. Woodruff makes an appropriate frontpiece.

Notes.

S. B. Dicks, representing Cooper, Taber & Co., and J. J. Comont, representing James Carter, Dunnett & Beale, London, are making their annual call on their American customers.

A correspondent writing from Frankfurt, Germany, informs us that many seeds will be scarce. Numerous perennials were winter-killed and the backwardness of the season threatens late asters.

CYCLAMEN SEED

NEW CROP

If you want thrifty plants that will bloom freely and produce gigantic bloom, then our Fancy Giant Cyclamen is the strain to grow. Our seed is grown for us in England by a leading specialist.

CHICAGO NOTES.

Business Notes.

V. C. Stock has sold out his store on West 12th street.

Hoerber Bros., of Des Plaines, Ill., have opened a wholesale market for their flowers in the Atlas Block, Washash avenue.

Ernst the Florist, West 12th street, has bought twelve lots at Berwyn and will sell the business and build greenhouses on the new site in the spring.

Mr. Arter, formerly with Scheffler on Chicago avenue, has gone into the retail business for himself on Evanston avenue, near Foster. His brother, J. Arter, has also opened a store at the corner of 40th and Colorado avenues.

Personals.

Louis Winterson and wife are at Louisville, Ky., for a rest.

Mr. and Mrs. Chas. McKellar left for Chillicothe, Ohio, after the convention.

A. Lange and family are home from an extended western trip to the coast.

R. C. Northam, wife and children spent two weeks in Muskegon and northern Michigan.

F. S. Ayres has returned from a three weeks' hunting and fishing expedition in Canada.

Mr. and Mrs. F. C. Dickinson are spending a couple of weeks at their summer home at Pelican Lake, Wis.

Visitors: Claude Wisley, Murphysboro, Ill.; Wm. E. and Luther Maynard of Knoxville, Tenn.; U. J. Virgin, Wm. Behm, Chas. Eble, New Orleans; B. Rosens, New York; T. L. Metcalf and wife, Hopkinsville, Ky.; Martin Reukauf of Bayersdorfer's, Philadelphia; F. Temple, Davenport, Iowa; H. Philpot, Winnipeg, B. C.

ROCHESTER NOTES.

Salter Bros. are showing some splendid gloxinias with very large leaves and exquisite colors.

Since last week's heavy rains prices of cut flowers have improved and the quality is better. Still asters are hanging fire somewhat in spite of some beautiful shades.

Formosa lilies are arriving in good condition, one firm especially stocking largely. Shippers advise growers to pot these lilies now for Easter bloom, growing them in a 45 deg. temperature continuously to obtain best results.

News of the decision to hold the 1910 Convention here was last Thursday received with the greatest satisfaction, as well amongst florists as trade in general. Considering the rivalry between Montreal and this little burg, great credit is due to Messrs. C. H., T. W. and A. E. Vick, George Hart, W. Day, W. Dildine and W. Keller for the result. The estimated number of probable trade visitors, judging from the Cincinnati convention, is put at from 1200-1500. A. P.

Visitors in Philadelphia: W. E. Clark, treasurer of the Pittsburgh Florists' Exchange, Pittsburgh, Pa., and a party of friends on their way to Atlantic City, Monday, 23rd inst.

DETROIT NOTES.

Wm. Brown has bought a place, about in order to make quick connection with his home near Birmingham.

Mr. Taepke's place is ready for the decorators. A large store room in the rear and a greenhouse 30x10 has been added; also a new icebox and office fixtures.

Robt. Watson has his new office, icebox and salesroom completed, causing an improvement of a hundred per cent. Talking over the cost of building, he is coming to the conviction that in the near future lumber will be delivered like flowers, wrapped in paper or done up in boxes.

Last Saturday all those who attended the convention arrived home full of praise for the convention and in particular the liberality of the fellow workers of Cincinnati. The most pleased among them was undoubtedly our baseball enthusiast, Louis Charvatt, who won several prizes for home runs, good hits, etc., etc., amounting to \$17.00.

PERSONAL.

John R. Perkins of Exeter, N. H., is now in charge of the plant of E. E. Arnold at Greene, R. I.

H. L. Trott has taken a position as grower at the Fernhill Greenhouses, Montgomery, Ala.

John Roach has returned from his Texas trip and is installed as manager at St. Vincent's Academy, St. Vincent, Ky.

James Gillis of Natick has been engaged as foreman in the floricultural department at the Agricultural College, Amherst, Mass.

Wm. E. Tricker, son of Wm. Tricker, the water lily specialist, has taken a position at the Florham Farms Greenhouses of C. H. Totty, Madison, N. J.

W. B. Ridgeway, formerly with the Eastern Nurseries and for the past year foreman on the grounds of the Alaska Yukon Exposition, has returned from Seattle to Boston.

Chas. Robinson, of Henry M. Robinson & Co., Boston, who has recently returned from a month's vacation, is suffering from poison caused by a rose thorn prick in his arm.

Rudolph L. Roehrs, son of Julius Roehrs of Rutherford, N. J., recently connected with the Eastern Nurseries, sailed on the Devonian from Boston on August 18, and will spend two years studying at Kew Gardens, London.

We have received a postal card bearing the autograph of John K. M. L. Farquhar, I. D. Farquhar, Winfried Rolker, Charles Lenker and Eugene Berndt of Henry Mette, indicating that all these estimable gentlemen met at Quedlinburg on August 6 and were taking full advantage of the opportunity to enjoy that interesting city.

INCORPORATED.

Louisville, Ky.—Kentucky Nursery Co., capital stock increased from \$30,000 to \$50,000.

Tarentum, Pa.—The McWilliams Floral Co.; capital \$15,000.

Farmingdale, N. Y.—The Herrick Floral Co.; capital \$5,000.

Flower Market Reports.

BOSTON Taken on the whole it is the general conviction that business is a trifle better than it was one year ago. The summer resort demand has undoubtedly fallen behind but other business has more than offset the loss. The flower most in evidence is the aster. It is seen in particularly fine quality at present. It had a bad setback at the last storm but in the intervening week has improved wonderfully, yet the quantity offered far exceeds the call and the best being only indifferent in its sale, the lower grades don't pay expenses of picking. The same is true of the cut of buds from the young roses of this year's planting. There are more than enough of the stock from plants grown especially for summer trade to supply all legitimate wants and the tiny fingerlings, coming in from houses recently planted are absolutely valueless. Very few carnations are seen. They are all right as to flower, but short stemmed. Quite a few precocious chrysanthemums, white and yellow are being received, and they bring about twelve dollars a hundred.

Trade brightened up **BUFFALO** considerably the past week and as stock on some lines was not so plentiful, values have been better. The roses were in better condition and at times not enough good grade could be had. Beau-

ties are fine and have sold well, also Kaiserins, Carnots and Bridesmaids. Carnations are taking a rest and the early crop of asters is about over. The Late Branching are coming in but not too plentiful at this writing. Selected stock has sold readily. There are plenty of Japan lilies to be had and they have moved well. Sweet peas were poor and hardly worth the time for picking. Lily of the valley has had a better demand. Plenty of greens are coming in.

Stock is so scarce that **CHICAGO** many stands are closed temporarily. The field carnations are beginning to come in and some are quite fair as to quality, though the supply is very short. Asters are still poor and only a small percentage are of good quality. Altogether, trade has probably reached the lowest mark of the season. Funeral work is practically all there is and there are days when there are not sufficient good flowers for that.

Flower Market Reports.

(Continued from page 313)

At this time of the
DETROIT year it is a genuine
pleasure to report a
shortage of stock because of improved
business. The amount sold and the
collections made are far in advance of
a year ago and it is only reasonable to
look with great hope into the future.

The quiet summer
NEW YORK market is supple-
mented by a very
light supply of greenhouse products,
many growers not sending anything at
all to the wholesalers. The outdoor
stock such as asters, gladioli, sweet
peas, hydrangeas and lilies, is, of

course, in abundant evidence, even
golden rod finding a place alongside
the cultivated material, but the in-
trinsic value of the entire output of
such things is only small and offers
but small inducement for the large
operators. Asters are seen in many
types, some weird, some beautiful,
some otherwise. The very finest, re-
sembling chrysanthemums, on two-
foot stems, are unloaded with difficulty
at a price that would have horrified
the grower last season. This being
the case what chance for a sale have
the little bundles of useless runts?
Absolutely none; they are worthless.
The roses, and practically the only
ones that are finding a steady market
are Maryland and White Killarney,
are in a similar plight. These
two are the favorites on all sides
and will so continue throughout the
coming season. Both "make up" beau-
tifully and have all the qualities to
grace the most exquisite work. Lily
of the valley is very fine now. Orchids
are more than ever a luxury and the
possessor of a few good Cattleyas can
set his price as high as he chooses.

The volume of
PHILADELPHIA stock arriving in
this market sen-
sibly diminished last week, which gave

a distinctly better tone to the market,
although the amount of trading was
not any larger. The quality of the
aster crop is now much better; the
stems are longer, the flowers larger,
full double and of excellent form and
finish. This fine summer flower is now
as it should be, and a satisfaction to
everybody. Gladioli have taken quite
a drop as to quantity and are now
cleaning up nicely. A new item now
on the conspicuous list is Hydrangea
paniculata bloom, used quite largely
in funeral work and also for decora-
tions. American Beauty roses sold up
well, although there is no marked dif-
ference in these either as to quantity
or quality. A few more cool nights
will help this crop. Liberty improved
slightly and My Maryland is quite a
bit better. Very fair stock arriving of
other roses—especially Kaiserins and
Brides. A few of the new crop carna-
tions are making their appearance; but
they are short stemmed as yet. Or-
chids are scarce, and lily of the valley
is also on the scarce side. Speciosum
lilies are fairly plentiful and go slow;
but Easter lilies are in good demand
with only limited supply. Water lilies
seem to be over for the time being at
least—none on the market this week.

Haverhill, Mass.—John E. Tabor
and Willis F. Eaton have started in the
florist business.

Buyer's Directory and Ready Reference Guide

Advertisements under this head, one cent a word. Initials count as words.

Display advertisers in this issue are also listed under this classification without charge. Reference to List of Advertisers will indicate the respective pages.

Buyers failing to find what they want in this list will confer a favor by writing us and we will try to put them in communication with reliable dealers.

DURING RECESS.

Florists' and Gardeners' Club of R. I.

That echo of song and merriment wafted across the summer sea, that aroma of clam bake and chowder permeating the atmosphere of Narragansett Bay from Field's Point to quaint old Pawtuxet, on Tuesday, 24th inst., afternoon and evening—who could mistake its meaning? Yes, you guessed right the very first time—the Florists' and Gardeners' Club of Rhode Island on their annual outing. Everything was just right—the weather, the water, the trim little launch—and everybody was happy. There was a delightful cruise down the bay and then a landing at Field's Point with appetites well sharpened for the toothsome clam bake and all that goes with it. After that, a moonlight sail and a return to Providence, everybody full of the recollection of a good time. There were Macnair, the president; the Appletons, Wm. and Eugene; Chappell, Dillon, Sweeney, Hazard, Hartstra, McCarron, McManus, Hockey and Leach and other lusty members of the floral fraternity of the Nutmeg State, and they had Stewart from Boston as a guest. Do we need to say more?

HORTICULTURAL INSTRUCTION.

To enable those who cannot attend regular schools and colleges to secure an education in horticulture, agriculture, etc., the Home Correspondence School, of Springfield, Mass., has prepared excellent courses which teach with great thoroughness all these branches.

The courses are prepared and taught by experienced, well-known instructors and anyone completely mastering the subjects taught will secure a good grounding in the fundamentals of these branches.

Anyone writing to the Home Correspondence School and mentioning HORTICULTURE will promptly receive a copy of their catalogue.

News of the Clubs and Societies

NORTH SHORE HORTICULTURAL SOCIETY.

A magnificent exhibition by this Society is on at Manchester, Mass., as we go to press. The special prizes have been awarded as follows:

Collection of annuals and flowers from seeds planted the present season; G. R. White silver cup, to Mrs. James McMillan, gardener Fred Brasch.

Group of foliage and flowering plants, not to exceed 100 sq. ft. floor space; Lord & Burnham Co. gold medal, to Mrs. Lester Leland, gardener Eric Wetterlow.

Asters; H. E. Fiske Seed Co. prize; 1st, A. M. Pattillio; 2d, T. J. Coolidge, gardener P. Sanborn.

White flowers in variety; Elsinæ's prize; 1st, G. E. Cabot; 2d, W. Swan.

Dahlias, all classes, A. H. Hews & Co. prize; 1st, Mrs. G. M. Lane, gardener Herbert Shaw; 2d, Mrs. J. McMillan.

Perennial phlox, six vases, 6 varieties; Merrill prize; 1st, Mrs. J. McMillan; 2d, W. Shaw.

Table of flowers by ladies only; Morley & Flatley gold and silver medals; 1st, Mrs. George E. Cabot; 2d, Miss A. G. Thayer.

Twelve varieties, to include Breck's Double Centaurea and Concord aster; Breck prize; to Y. Abbott.

Hardy perennials, 12 vases; Roberts & Hoare, gold medal to Mrs. H. L. Higginson, gardener J. Scott; silver medal to Miss A. G. Thayer.

Largest collection of hardy perennials named; Manning medal to W. Swan.

Six Nephrolepis; Dreer prize; W. Swan, 1st and 2d.

Lilies; T. J. Grey Co. prize; to W. Swan.

Zinnias; T. J. Grey Co. prize; to Mrs. Jas. McMillan.

Tuberous begonias; Bullock Bros.' prize; to Mrs. Lester Leland.

Largest collection of vegetables; Mrs. Philip Dexter silver cup; to Mrs. Gordon Abbott.

Quincy Market sweet corn; Schlegel & Fottler Co. prize; to T. J. Coolidge.

Largest pumpkin or squash; Fiske Seed Co. prize; to Philip Dexter.

Red Cross tomato; Schlegel & Fottler Co. prize; to W. Swan.

Collection of 20 varieties, including salads; Farquhar silver cup; to Mrs. E. S. Grew.

Honorable mention to Mrs. E. S. Grew for group of foliage and flowering plants, ferns and summer flowering chrysanthemums Carrie; R. & J. Farquhar & Co., for herbaceous perennials; W. W. Rawson & Co., dahlias and gladioli; Certificate of Merit to Mrs. Whipple for two vases of asters.

AMERICAN CARNATION SOCIETY.

The American Carnation Society held a meeting at Cincinnati on Thursday afternoon, August 19. The program for the Pittsburg convention was outlined, and the premium list revised. There was considerable discussion of the proposition of a combined meeting of the Carnation and Rose Societies.

MASSACHUSETTS HORTICULTURAL SOCIETY.

At the annual August exhibition, Saturday and Sunday, August 21 and 22, the much discussed Wonderberry from Mrs. E. M. Gill and Solanum Nigrum from Robert Cameron, Harvard Botanic Garden, were shown side by side. Nobody was able to detect any difference except that the latter was much more prolific. The show was excellent throughout. R. & J. Farquhar & Co. were again at the front with a gigantic display of hardy herbaceous flowers and great masses of lilies in several species, including some new ones. Another showy exhibit was that by B. Hammond Tracy, consisting of gladioli in not less than one hundred varieties. A table set with china, etc., illustrating how gladioli may be used in table decorations, was a prime attraction. The Bellevue Nurseries were represented by a fine collection of hardy herbaceous flowers and Old Town Nurseries had a display of similar nature. Mrs. J. L. Gardner with border perennials, F. J. Rea, T. C. Thurlow and Wm. Whitman, with superb phloxes; W. W. Rawson with dahlias, etc., were also among the prominent contributors. China asters were well shown by Wm. Whitman and others. The fruit and vegetable displays were superb; Black Beauty and Imperial New York egg plants from W. J. Clemson, were pronounced the finest specimens ever seen by the committee. Honorable mention for Hohenzollern asters was awarded to Mrs. Alvin Fuller, for display of H. T. roses to R. & J. Farquhar & Co., for display of dahlias to W. W. Rawson & Co., and for Gladiolus Faust to B. Hammond Tracy. First class certificates of merit were given to W. W. Rawson & Co., for Gladiolus Wm. Steinhausen, Gladiolus Mrs. Frank Pendleton and Gladiolus Hohenstaufen; B. Hammond Tracy was awarded a silver medal for artistic display of gladiolus.

LENOX HORTICULTURAL SOCIETY.

At the exhibition of annuals and perennials on August 12, at Lenox Town Hall, Miss Adele Kneeland, gardener H. Schmeiske, was the leading prize winner in the phlox exhibit, showing 38 varieties including Charles Darwin, Huxley, Hermione, etc. There was an unusual showing of sweet peas for the season, the first prize going to Mrs. John Sloane, gardener A. J. Loveless. Mrs. J. E. Alexander, gardener W. Jack, won first for basket of sweet peas. Other prize winners were Charles Lanier, gardener A. H. Wingett; Miss H. Myer, Mrs. Robt. Winthrop, gardener S. Carlquist; Morris K. Jesup, gardener John Donohue; George H. Morgan, Mrs. Edith R. Wharton, gardener M. T. Reynolds. There was a splendid showing of fruit and vegetables. The judges were Harry Allen and James Blair of New York.

The chrysanthemum show will be held on October 26-27.

RAILROAD GARDENERS' CONVENTION.

The third annual convention of the American Association of Railroad Gardeners convened in Horticultural Hall, Philadelphia, on the morning of August 24th. In the absence of President Hirsch, J. S. Butterfield of the Missouri Pacific was called to the chair. The secretary of the association, George B. Moulder, of the Illinois Central, made an address, outlining the objects and history of the association. A lengthy discussion on the voting privileges of members was taken part in by Messrs. French, Dunlap, McCauley and others. The question was finally disposed of on motion—one man, one vote—irrespective of railroad. John Westcott extended a welcome on behalf of Philadelphia, the Pennsylvania Horticultural Society, and the Florists' Club. In the afternoon an inspection trip over the Reading R. R., in charge of Albert C. Huebner, in the absence of his father through sickness, was taken by way of Norristown and Lansdale to Trenton Junction, which was much enjoyed. William Kleinheinz, a close personal friend of Mr. Huebner, assisted in doing the honors of the occasion which wound up with a dinner at Ostendorff's as the guests of Mr. Huebner. The evening meeting took place at the Florists' Club quarters, at which many able papers were discussed, particulars of which we will give later. Among those present and speaking were:

C. J. Andrews, P. R. R., Morton, Pa.; J. A. Byrne, B. & O., Relay, Md.; Patrick Foy, Norfolk & Western; G. E. Preston, Illinois Central; J. Gipner, Michigan Central, Niles, Mich.; F. W. Vail, Central of N. J., Dunellen, N. J.; C. H. Tritschler, Nashville; E. Engelmann, P. R. R., J. S. Butterfield, Mo. Pac.; V. Wickler and Mrs. Wickler, Ills. Central, Freeport, Ills.; Joseph Carson, Main Line Div., P. R. R.; David C. Rose, Md. Div., P. R. R.; Jules Girtanner, N. Y. Div., P. R. R.; R. J. Rice, Michigan Central; N. Stewart Dunlap, Can. Pac., Montreal; Wm. A. Kellar, Ills. Central, Louisville, Ky.; M. C. Allison, Del. & Hudson, Green Island, N. Y.; J. V. Wingert, C. V. R. R., Chambersburg, Pa.; Mr. Martin, Nashville, Tenn.

The following officers were elected for ensuing year: George B. Moulder of Illinois Central R. R., Chicago, president; Patrick Foy, Norfolk and Western R. R., Roanoke, Va., vice-president; J. S. Butterfield, secretary and treasurer. After the executive business, evening session of August 24, was concluded several interesting papers were read on subjects connected with the objects of the association. The paper by E. A. Richardson on the "Ideal Railroad Gardener," read by G. J. Andrews, was listened to with great interest as it gave a clear idea of the executive ability and personal qualities needed in the man who must interest both the public and the railroad in the making of "a beautiful gateway into each community." Other

WANTS, FOR SALE, ETC.

Advertisements in this column one cent a word. Initials count as words. Cash with order. All correspondence addressed "care HORTICULTURE" should be sent to 11 Hamilton Place, Boston.

HELP WANTED

HORTICULTURE needs a wide-awake representative in every town in the land. Good commission paid on advertising and subscriptions. If you are ambitious, write for terms.

WANTED—Experienced grower for commercial place near Boston; must be good grower of carnations especially. Good salary to the right party. Address, with references, Carnations, care of HORTICULTURE, 11 Hamilton Place, Boston.

WANTED—A good grower of roses, carnations, chrysanthemums and potted plants in a commercial establishment. Good position to the right man. J. M. Ward & Co., Peabody, Mass.

SITUATIONS WANTED

WANTED—Position as superintendent of a country estate or farm. Long experience in the culture of fruits, flowers, vegetables, and general farm crops; also in the care of trees, shrubs, lawns, avenues, cattle and poultry. Highest references. Address Experience, care of HORTICULTURE.

papers read were, "Effect of R. R. Gardening on the General Public," by H. S. Moulder; "Effect of R. R. Gardening on Employees," by J. A. Byrne and Joseph Carson, and a particularly interesting one on "Does R. R. Gardening Increase Business?" by N. Stewart Dunlop of the Canadian Pacific R. R., Montreal.

Wednesday morning the visitors took a trip over the P. R. R. lines as guests of P. R. R., E. A. Sterling, forester, in charge, and in the afternoon a boat trip to Riverton, N. J., as guests of the H. A. Dreer Corporation, W. A. Hoyle in charge. At 8 p. m., a session was held at the Florists' Club quarters in Horticultural Hall.

Thursday's program included a trip to Morrisville, Bucks Co., Pa., as guests of the P. R. R., E. A. Sterling in charge.

IS YOUR NAME IN THE ABOVE LIST? IF NOT, WHY NOT?

BAR HARBOR HORTICULTURAL SOCIETY.

The second annual flower show has passed into history with a remarkable success attending it. In the two days there was an attendance of about two thousand people. The grounds in the front and rear of the Arts Building were utilized for the exhibits in addition to the extensive hall room. Rivalry was keen. Mrs. Joseph Pulitzer, gardener W. E. Ekstrom, took the prize for the best individual exhibit with *Allamanda Hendersonii*, nine feet across, and *Allamanda Williamsii*, ten feet high. For best group of stove or decorative plants, John I. Kane, gardener K. McLean, and J. S. Kennedy, gardener W. T. Burton, were first and second respectively. William Miller of Mt. Desert Nurseries, showed some magnificent fuchsias. Among the other large prize winners were Mrs. E. C. Cushman, gardener John Remick; A. C. Gurney, gardener C. L. Shand; Louis B. McCagg, gardener Harrison Stiles; D. C. Blair, gardener Eugene Mitchell; George S. Robbins, gardener J. F. Bunker; J. W. Auchincloss, gardener W. Seaver; W. J. Schieffelin, gardener T. F. Anthony; A. M. Coates, gardener John Brown; Mrs. Edward Coles, gardener Edw. McGranagham; Geo. S. Bowdoin, gardener Bernard Morris; Mrs. J. T. Bowen, gardener A. E. Chilman; Edgar Scott, gardener A. Mitchell; Misses Morrill, gardener C. W. Heath; H. L. Eno, gardener W. T. Chandler; Mrs. John Harrison, gardener Washington Grant; Miss N. H. Dehone, gardener N. V. Wilson.

Among the exhibits not for competition were a fine collection of orchids and foliage plants from Julius Roehrs & Co.; gloxinias, fuchsias, N. Whitmani and a new N. Milleri from Mt. Desert Nurseries; gladioli from B. H. Tracy; dahlias from W. W. Rawson & Co., and a new double scarlet dahlia from C. L. Shand, to each of which a certificate of merit was awarded.

Robert Cameron was in charge of the arrangement of exhibits. D. Finlayson, T. D. Hatfield, E. O. Orpet, J. T. Clarke, W. N. Craig and A. P. Meredith were the judges.

The Mt. Desert Nurseries, George R. Dorr proprietor, gave a banquet to the visitors on Saturday evening, which about 100 attended. William Miller acted as toastmaster.

CLUB AND SOCIETY NOTES.

The annual flower show was held at Southampton, Mass., on August 13, with many fine exhibits by amateurs.

The flower carnival held at Addison, N. Y., on August 17, brought out a greater variety than ever before from the numerous gardens. The largest exhibits were of gladioli by Chas. Larrowe of Cohocton, and of sweet peas by E. A. Higgins of Avoca.

At a meeting of the executive committee of the Connecticut Horticultural Society on August 17, President Huss announced the offer of a prize of \$25 from A. T. Boddington for best collection of vegetables, and a silver medal from Stumpp & Walter Co., for best collection of dahlias at the coming dahlia show.

GARDENERS' AND FLORISTS' CLUB OF BOSTON.

The club will hold its next field day at the Bay State Nurseries, North Abington, Mass., on September 11. Regular club meetings will resume on September 21. J. W. Duncan will be the speaker of the evening, his subject being, "Some Facts About the West." J. K. M. L. Farquhar will deliver a lecture on bulbs at the October meeting, with stereopticon views.

W. N. CRAIG, Sec.

"THE FIRST NEWS OF THE BIG MEETING."

Editor HORTICULTURE:

Dear Sir:—For the man who does something worth doing, better than the rest, I have a sincere admiration; whether it be ploughing a furrow, growing a tree, or making a paper for "live ones." And I want to send you a stranger's congratulations on getting to me and in the same way to others, the first news of the big meeting at Cincinnati. There are bigger ones, "but Oh, you Horticulture."

My personal congratulations and a hand-shake. That's all.

Yours truly,

JOHN WATSON,

Newark, N. Y.

OBITUARY.

Mrs. Robert George.

Mrs. Robert George, wife of Robert George, of the Storrs & Harrison Co., died on Aug. 13 at her home at Painesville, O. Mrs. George has been an invalid for some time, but through her lovable character and sympathetic personality had endeared every one to her and her funeral was largely attended. E. G. Hill of Richmond, who was a schoolmate of Mr. George, Adam Graham and Charles Hart of Cleveland were present at the last sad rites.

Mrs. Mary J. Shurtleff.

Mrs. Mary J., wife of Josiah B. Shurtleff, florist, of Revere, Mass., died on August 21, at her home on Cushman avenue, following an illness that lasted four months. Besides her husband she is survived by two sons, Josiah, Jr., and William H. Shurtleff of Revere, and one daughter.

Mrs. George H. Linsdale.

Mrs. Linsdale, widow of George H. Linsdale, who, until his death in June, 1908, was a familiar figure in the retail flower district of New York, died recently. She left two daughters.

Valentine Fox.

Valentine Fox, a native of Germany, who has resided in this country since 1855 and followed the occupation of gardener near Fort Wayne, Ind., died on Aug. 9 at the age of 69.

John Carson.

John Carson, a native of Ireland, died at his home in Chicago on Aug. 12, at the age of 79. He was a landscape gardener.

W. H. Wright.

W. H. Wright, a florist of Vicksburg, Miss., died on Aug. 10, aged 60. Two daughters and two sons survive him.

Do You Know APHINE ?

"COLLIER'S WEEKLY" says:

"Aphine has a future as wide and long as the United States."

The "FLORISTS' EXCHANGE" says:

"It is not very often that any new enterprise receives such an impetus at the very start as the newly exploited insecticide Aphine has. We have been told on what would seem to be the very best expert authority that this preparation is a very excellent thing."

The "FLORISTS' REVIEW" says:

"The demand for Aphine, the insect destroying discovery, is widespread. Its endorsement has been remarkable. An unsolicited editorial in Collier's Weekly is especially strong in its behalf, and Arthur Herrington, Albert M. Herr, Louis A. Noe, Brant-Hentz Flower Co., August Belmont, and the entomologists, J. B. Smith and E. B. Southwick have much to say as to its efficiency."

It Kills the Black Fly, Green Fly, White Fly, Red Fly, Thrip, Red Spider, Mealy Bug, Slugs, Caterpillars and White and Brown Scale.

To spray—Use 1 part Aphine to 40 parts water.

\$2.50 per gallon; \$1.00 per quart.

Descriptive Circular on Request.

A MAPLE TREE PEST.

There is an insect attacking maples that is fatal if left unchecked. It is known as the maple phenacoccus. Its presence is readily recognized by the characteristic whitish appearance of the bark, due to the presence of numerous small white oval cocoons of the male and also to the conspicuous woolly masses on the under sides of the leaves produced by groups of females. The species occurs only on hard maples and produces two or three generations annually.

It can be best controlled by thorough applications of such contact insecticides as a whale oil soap solution or a kerosene emulsion. This treatment would be more effective if given at the time when most of the minute, yellowish young are crawling. This latter must be determined by observations, since the dates vary considerably from year to year.

Kerosene emulsion may be used at the rate of one gallon to seven gallons of water, or whale oil soap at the rate of one pound to two gallons of water, while the foliage is on the trees. It can also be used in winter with some success, but double the strength may then be taken of either solution.

This scale insect is a native of Europe, and has no doubt been introduced into this country on nursery stock. It

THE KENTUCKY TOBACCO PRODUCT CO.,

Louisville, Ky.

has been recognized in the United States for a number of years, and in some places is occasionally proving very destructive.

The writer treated trees of five shade tree owners last season, in June, while the insects were still in the egg stage. A little compressed air sprayer was used on the trees and the application was made to the trunk and larger branches with a scrub brush, as this is where the egg masses mostly harbor. Sometimes the bark will crack in large places on the trunk of trees and the insects will gather under the bark and a scrub brush is therefore a very effective implement.

SYLVANUS VAN AKEN,
Port Ewen, N. Y.

ADDENDA TO SWEET PEA REVIEW, 1909.

Howard M. Earl, manager for W. Atlee Burpee & Co., from whom much of the information contained in the article appearing in our issue of August 14 was obtained, writes under date of August 18 as follows:

In looking over some notes the other night I found I unintentionally failed to correct some wrong information that was given to me while in California, which was to the effect that "President Spencer" was the same as "America Spencer." I took an expert's opinion for this but upon investigating am advised by Mr. Burpee that the "President" is quite similar to our Senator Spencer to be introduced in 1910, but the color of the stripings and flakings is not so bright.

That Sweet Pea article of yours was fine. Some of the hyper-critical may criticize it but the meat was there.

We take pleasure in making the correction referred to above by Mr. Earl.

And This Is The House His Neighbor Built

Last week you recall we showed you a snug little U-Bar proposition that was so satisfactory to the owner that he said as much to his neighbor—and his neighbor built one. It, too was a case of limited space, and is located between the drive and dwelling, in fact, the vestibule faces one of the main entrances.

The usual greenhouse construction, with its heavy members would have been impractical here, because the dwelling shades the greenhouse a part of the day—a light, the absolutely lightest house was necessary—the U-Bar “filled the bill.”

And did you send for the catalog?

The Horseshoe Brand

You are in business to make money — so are we. Perhaps it has not occurred to you that the relation between the importer and consumer is such that it is to the importer's interest to help the consumer make more money. Whether the reason be selfish or not matters little. It does not in any way affect the sincerity of our purpose in rendering efficient service to our customers by careful and prompt execution of their orders, thereby advancing the value of our goods to our clients and promoting their sale.

We do not aspire to sell cheaper than others, but to furnish the best bulbs the various growers can produce. We honestly believe if you would **buy some of our best bulbs** you would be so impressed with their superior quality, that you would insist upon getting the same brand in future. Horseshoe Brand bulbs are produced by the very best growers in their respective sphere and they will average the highest returns. **Ask the man who grows them.**

A Lilium Wardarai, size 7-9.

Forced for Easter, 1909.

It is about time for Japan lily bulbs and if you have not already bought some of our Horseshoe Brand bulbs, it will pay you to try a case or so of our best. They are not cheap but they are good. There is as much difference in some bulbs as between a buzzard and a bird of paradise. **DO YOU WANT BUZZARDS?**

Notes from the Arnold Arboretum

Of all the Poplars the most handsome in foliage is the new *Populus lasiocarpa* from Central China. A young plant is at the first sight hardly taken for a Poplar and may rival many of the ornamental foliage plants in beauty. Our plant is now about five feet high and covered to the base with close set very large leaves of bright green color marked beautifully with red veins and borne on stout bright red stalks. The leaves attain up to twelve inches in length and ten in width and are the largest of any Poplar; they are heart-shaped in outline and pointed, with closely serrate margin and the stalks are about four inches long. It has proved hardy in England, but has not yet been tried out of doors during the winter here. In its native habitat it grows into a tree from twenty to forty feet high.

Another new tree with handsome foliage is *Tetracetrion sinense* closely allied and very similar to *Cercidiphyllum japonicum* now well known in cultivation and appreciated for its fine and distinct foliage, but the former is easily distinguished by the leaves being alternate, not opposite as in the latter. They are ovate in outline and long pointed, with obtusely serrate margin, bright green above and whitish on the under surface, from three to four inches long and borne on slender stalks. The insignificant flowers appear with the young leaves in slender pendulous catkins from three to six inches in length. In its native country it attains a height of fifty feet. Like the preceding species it is yet to be tested here in regard to its hardiness.

The many species of *Rhamnus* in cultivation are generally not of great value as ornamental fruiting shrubs, since the berry-like fruits are usually dull black, though they are freely produced and of some effect in contrast with the green foliage or on the bare branches in winter. The species, however, which belong to the *Frangula*-group are handsomer, as the fruits turn red before they assume their final dark color and like *Rhamnus Frangula* look rather pretty for a short time, while the branches are studded with red and black fruits at the same time. Particularly handsome is in this respect the recently introduced *Rhamnus crenata* from Japan as the red color of the fruits lasts longer and is brighter than in the other species. It is an unarmed upright shrub with ovate-oblong finely serrate leaves from two to four inches long; the fruits which are preceded by insignificant greenish-white flowers appear in axillary short-stalked clusters along the branches and assume in August a bright red color changing later to purplish black. In many books and catalogues it is given as being in cultivation for a long time, but the shrub met with sometimes in gardens under the name of *Rh. crenata* is usually *Rh. dahurica* which differs very much in its spiny branches, in the fruits changing from green immediately to black, the narrower glossy leaves and the scaly winter buds, while *Rh. crenata* like *Rh. Frangula* has naked winter buds. *Rhamnus crenata* has proved perfectly hardy at the Arboretum.

Alfred Rehder.

European Horticulture

MUSEUM BOURGÆI

This composite, a native of the Caucasus, possesses grand foliage, and a flowershaft of 70 cm. in height and 16 cm. in diameter; and the seed was collected by Dr. Levier during his journey in that region, and sent to M. Correvon at Geneva. The doctor informed M. C. Sprenger, nurseryman of Naples, that the plant grows in limestone soil containing a layer of vegetable matter, at the margins of woodlands near Muri and Lentichi, and reaches a height of 9 feet, and the plant is of high decorative value. There exists a form named *integri-folium* now in bloom with a gentleman in Florence. M. Bourgæi is in flower during the months of June and July.

LADY GARDENERS

At the present time Switzerland has two horticultural schools, both in Niederlenz, whilst in Germany there have been established quite a dozen. The most of the "marriageable" ones search for and find their livelihood in small institutions, and estate gardens. Notwithstanding the fact that for thirty years the reclamation drum has been thumped vigorously, nothing as yet has been heard or observed at exhibitions of the actual efforts of our charming colleagues. Why is this? Surely because of the coyness of the male gardeners. These should, as soon as may be, conduct the pretty Paradise gardeners home and carry on housekeeping, changing about from the garden and the greenhouse, into the kitchen, and when it so far goes into the nursery. Then the journeyman and the serving maid question is solved at one and the same time; and the man has only then to care that he keeps the grip in his own hand.

THE "ENGLISCHER" PELARGONIUM IN GERMANY

The "show" or "Englischer" Pelargonium probably so called because of its introduction from England to Germany has, for a great number of years found favor in the latter country amongst all sorts of people, whereas in England its cultivation has waned greatly, and but few cultivators have the large collections of varieties that were once common in gardens of any pretensions. The original "show" varieties are supposed to have been derived from *P. hortulorum*, a Cape of Good Hope species introduced to Europe by Masson in 1794. Normally this species is white flowered, loose in habit, and having a long slender tube to the calyx, and long stalks to its deeply lobed leaves. Another progenitor of the "show" varieties appears to have been *enculatum* introduced to British gardens by the Earl of Portland in 1690. In the fancy or small flowered show pelargoniums, the first of the race was *P. Willoughbyanum*, which was bred from the ordinary varieties of the period—about 1835.

The German varieties of these show pelargoniums have been in recent years greatly improved in a variety of ways by Herr Carl Faiss, nurseryman at Feuerbach, Herr Eeubronner, and Herr Burger; and in compact-

ness of growth, size and brilliant coloring of the flowers leave but little to be desired. Colors are to be met with among the varieties brought out by these specialists that range from white, rose, brilliant scarlet, to deep lilac, and other minor tints.

Among the best of Faiss' last year's novelties are Grossherrogin, Hilda von Baden, Deutscher Ruhm, Schiller, Goethe and W. Hauff. A fine variety of the present year has appeared in Graf Ferdinand von Zeppelin; and Michael Buchner is not less beautiful. The color of the Graf Zeppelin is salmon-red, and it has equal-sized reddish blotches, bordered with scarlet. The flowers are of fine form, semi-double, and they form gigantic trusses. The habit is compact, and the flower trusses are raised well above the leaves. Illustrations taken from photographs which appear in "Die Gartenwelt" for August 7 of this and other varieties, afford good ideas of the value of these German varieties of the Pelargonium for decorative purposes. What is really required is a remontant habit of flowering, such as has really been obtained in Faiss' variety Ostergruss, which was shown at Mannheim horticultural show last year as a group plant, and was in bloom continually till late autumn. Another equally good perpetual flowering variety has yet to be raised, and caution is necessary to buyers, if they would escape disappointment; the more so, as Ostergruss is difficult to obtain seeds from, however carefully the flowers are pollinated.

Frederick Moore

Manganese in the Soil

Let no one confuse Manganese with Magnesium, the latter of which is found in Epsom Salts as we have explained before. These two have little in common except that they are both common as dirt, although in small quantities. Manganese is even less heard of than Magnesium although in a Norway spruce it forms forty per cent. of the ash of the bark. It is an element not unlike iron, a large use of it being in the manufacture of steel. A common compound is "Black Oxide of Manganese," costing a few cents per pound while other combinations are boiled with oil to make a quick dryer, hence "raw" and "boiled" linseed oil. Found in the soil usually in a not greater proportion than one or two parts per thousand.

From time to time many and various experiments have been worked with Manganese. Like many chemicals it is a stimulus in minute quantities and its resemblance to iron makes interesting chemical possibilities, although it has been shown to be injurious in certain amounts also. The combinations that this element makes are usually hard to dissolve in water which is quite different from the combinations of Soda or Potash or Magnesium. The excuse for further consideration at this time of Manganese is the newly erected landmark—the Manganese Monument, a recent stride in the chemistry of soils.

To see our monument we will have to ship across to Hawaii where Mr. Kelley will take us in hand. Out there towards the setting sun they raise pineapples—or "Pines," as they call them. Ask California or Florida if they don't. If the pines won't raise, or get a bilious yellow instead of a bright green, there is trouble, lots of

it, and the place is full of Japs, Chinks and Brownies. Then they go around looking for a soil doctor and they get sent to Kelley as representing the paternal Uncle Sam, and he takes the trouble, the pineapple, and the soil into the laboratory and slams the door so that he can remove his outer garments, for the climate is warm. Then he does what any chemist "or other fellow" does in parlous time, he tries to find out by the printed word what all other chemists, all over the world, ever, ever said, did or thought about yellow pines or soil, yellow pines and soil, good pines and all kinds of soil, and bad soil and all kinds of pines. What did they say? and what did he find? Nothing, except, Ah! yes—and here's where Kelley comes in. Out there soils are good or bad for pines as they are red or black. "Why?" says Kelley, and no one knows, so he whoops up the cookery, gets the smells acoming, and finds out that both soils have all the plant food and the pines should get all the good that their hard sweet hearts could possibly desire. What ails the soil? They have been limed, cultivated and molly coddled in all known ways to make them fertile, but the pines still go yellow on the black soil. Feminine-like, perhaps, they don't care for mourning colors. If so, why do they love the red? No answer forthcoming. Kelley puts on the kettle once more, and this time he finds from ten to fifty times as much of a certain element in one soil as in the other. That element is Manganese. The black soils—bad for the pines—have five per cent. of the Oxide, and so down to the good soils which have one-third of one per cent. People in the United States need not worry much about Manganese, for Hawaii is a land of volcanic origin and such soils are very rare on the mainland of this country. Do you now see the monument growing up?

Kelley has had hundreds of analyses made, he has looked up various experiments with Manganese, down from the rice paddies of Japan to the fair waving wheat plots in Woburn, Old England, but he has not yet quite finished the monument. Those pines still have a lap on him. They still have a few secrets, but not for long.

Here's to Kelley and his likes; would we had hundreds of his kind right here at home, yes, and under warm glass in the winter time if it's only a question of climate.

Rudley M. Bray

View in Flower Garden

Estate of Mrs. B. B. Tuttle, Naugatuck, Conn.

The cover shows a partial view of the flower garden of Mrs. B. B. Tuttle in Naugatuck, Conn., the center of attraction being two nice specimen rhododendrons, the one to the left standing nine feet high and having a diameter of from twelve to fourteen feet, the one to the right standing six feet high by nine feet in diameter.

While the rhododendrons in themselves are beautiful, it is to be regretted that they are very much out of place, being planted in formal flower beds. Whoever planted them evidently did not think that they would ever attain such a size, and now it would be foolish to attempt to move them, at least the larger of the two.

M. J. Ope

Natural Manures

The manure question is one of the most important in our trade and yet but few florists pay economic attention to it.

The Continental European knows fully the value of natural manures and, although he recognizes the value of fertilizers, where nothing else is obtainable, he searches very closely before spending hundreds of dollars for the latter. The greatest objection to natural manure comes from the employe, who complains of the unpleasant smells and the fear of contagious diseases, but after 17 years close study of the question and handling of every known natural manure, I believe that this latter is more healthy than any "patent" one produced and I regret to say that my impression of the average American and English employe points to more consideration for his own comfort, than that of the plants of which he has charge.

In whatever trade one engages, competition means production at as cheap figure as possible and, as labor ought to be the last to be cut down, other expenses of production should be well considered. Therefore, for the purpose of manuring, divide your plants into two classes, viz., flowering and foliage. Then let us say you have access to some of the following manures: horse, cow and bird manure, night soil, coal (bituminous), blood, fish offal and cut grass.

Of course, in many places none of these are obtainable, or even allowed to accumulate, still the young florist who starts outside city or town with small means, will be able to get some of the ingredients mentioned and he will, with the following tables for mixing, find himself quite a sum ahead at the year's end.

FOR FLOWERING PLANTS:

- I. One bushel: $1\frac{1}{2}$ part horse manure
 $\frac{3}{4}$ part cow manure
 $\frac{3}{4}$ part night soil
 in 50 gallons water; soak one week; make 300 gallons.
- II. One bushel: 1 part blood
 1 part fish offal
 in 50 gallons water; soak two weeks; make 500 gallons.
- III. $\frac{1}{2}$ bushel horse manure
 3 bushels cut grass from lawns
 in 50 gallons water; soak one week; make 200 gallons.
- IIII. 1 peck bird manure
 in 50 gallons water; soak one week; no further dilution.

FOR FOLIAGE PLANTS EXCLUSIVE OF FERNS:

- One bushel: $1\frac{1}{4}$ part cow manure
 $1\frac{1}{4}$ part night soil
 $\frac{1}{2}$ part soot
 in 50 gallons water; soak one week; make 500 gallons.

FOR FERNS:

- $\frac{1}{2}$ bushel: 1 part cow manure
 1 part soot
 in 50 gallons water; soak one week; make 500 gallons.

The following rules should be observed:

Set one day apart for manuring and let nothing interfere with it.

Do not manure when plant is dry. Might as well use sulphuric acid.

Keep fluid off leaves and flowers.

No manure more than six months old should be used for liquid purposes.

Allow no wood shaving in stacking as these will cause fungus.

Stir well to obtain same consistency in each gallon.

Sieve all manure from stockbarrel.

Allow room in stockbarrel for fomentation.

Where, as in private greenhouses, plants are kept

from year to year, a watering with lime water (1 to 50 gals. water) every three months should be given.

For those who can not obtain any of the above mentioned manures, it will be necessary to find something known to contain potassium, phosphorus and nitrogen and I think they will find in bone meal as perfect a fertilizer as can be got. Bone meal contains both phosphate and nitrogen, and as long as the soil is not allowed to get dry, it can be used in large quantities.

Nitrate of soda produces strong leaf and stem growth and should be given as fluid; 50-1 being a safe solution.

Sheep manure is, in pure state, one of the best, but of the many bags I have used, all have contained too large an amount of foreign matter, viz., straw and dust, as well as other animal manures. If pure, 1 lb. to 1 gallon of water, soaked for one week, will make 30 gallons.

Wood ash contains all that is necessary for plant life, but it is in my opinion one of the most tricky fertilizers, as one never knows the wood from which the ashes have been produced. I have seen so much damage done, through injudicious application, that I only use it if nothing else can be got.

A fertilizer rarely seen in the U. S. is Clay's, and I presume the cost at first sight seems prohibitive, but the quantity used need be so small to produce a splendid effect, that the 112 lb. bag goes farther than 6 to 7 bags of other fertilizers of the patent kind. I have used it now for ten years and for exhibition plants it is indispensable.

A. PENGEL.

Rehmannia angulata

I grew this interesting plant four years ago with more or less success, and some disappointment. It is truly beautiful and the colored plate, supplement to HORTICULTURE, Aug. 14th, is a just representation of both save the latter is a better pink and the plant, I believe, is of a dwarfer habit. It is surprising to see such large handsome individual flowers on such a comparative slender stem.

The seed was sown early in spring and the plants were set in border about the middle of June and flowered from August until early fall. The plants were very free growing after the seedlings were potted up but like many herbaceous plants it had a weedy appearance though this was overcome somewhat by the attractive flowers; these were fragile, of soft texture and rains and winds were disastrous.

As to propagation, the plant produces seed in abundance and sends up innumerable offsets which if potted and wintered in a frame with slight protection make strong plants for the following season; but as a pot plant in flower I was most disappointed and I would advise those who wish to grow it as such to go slowly, for if there is a "white-fly" in the neighborhood the plants will prove the greatest attraction and there is no cure for them indoors or out.

Our friends
 the birds

We commend to every reader of HORTICULTURE, and particularly to the women and children, the forcible presentation by Mr. Wm. L. Finley, on another page

of this paper of the value of our wild birds to agriculture and horticulture and the effect of the iniquitous slaughter of these creatures which is being carried on continuously to gratify the demands of women for their wings and plumes. We can say nothing to illumine or strengthen Mr. Finley's plea; we only ask that you read it attentively and thoughtfully. Apart from the humane aspects of such a question, it does seem to us that the horticulturists, and the horticulturists' wives and

daughters should be among the most active defenders of their feathered allies and the foremost in any crusade to put a stop to this shameful destruction which is crippling their industry and for which no reasonable justification can be advanced.

"Space writers'
 chaff"

"Of all the plagues, good Heaven thy
 wrath can send,
 Save, save, oh save me from the candid friend!"

The above lines, written about a hundred years ago by George Canning, have no doubt, fitted more than once into the experience of us all. At last, even that much-discussed man, Luther Burbank, has found it necessary to come out with a repudiation of the toadies who have sickened the horticultural world with their drivel about the man and his work ever since it became known that a sum of money had come into his control. Mr. Burbank is now quoted as saying:

"The extravagant estimates of my work has been the bane of my existence. There has been so much written about me by sensational writers who know nothing either of me or my work. I am not responsible for all these things and anyone with any knowledge of horticulture could discern at once that much of the stuff sent out is nothing but space writers' chaff."

It is greatly to be regretted that Mr. Burbank did not speak out in this fashion long ago. Hundreds of horticultural people, in fullest sympathy with anyone engaged in a sincere effort to develop improved varieties of horticultural products, looked for him to call a halt to this fool talk which invited the ridicule of the whole world. "Better late than never," though, and Burbank stock ought now to take a decided upward turn in many quarters. Wonder where that great luminary, the "Council of Horticulture" stands on the Burbank question.

"A lion
 in the path"

"Get jealousy out of your system."—
 From W. F. Kasting's speech at Cincinnati.

Our friend Kasting has said a good many things in his trite outspoken way but never anything more tersely expressive and to the point than this bit of advice to the retail florists, whose participation in the next National Flower Show was being urged. It is commonly asserted that the unwillingness to place themselves in a position where there is possibility of someone surpassing them, is the main motive in deterring the workers in flowers from displaying their art in public exhibitions. Even where assurance is given that competitive awards will not be made the reluctance still continues, apparently from the fear that they may be placed in the shade by the proficiency in public of those whom they have been disposed to look upon as their inferiors. Regrettable this all is and, in its general effect, a serious hindrance and injury to the advancement of the floral decorators' art which, being thus deprived of the opportunities for comparison and public demonstration which other lines of fine industry have found so helpful, stands today as showing the least degree of progress of all the departments of horticulture during the quarter century since the great awakening of which the organization of the S. A. F. was the signal. More elegant work, it is true, is being turned out by the retail trade of the present day than twenty-five years ago, but it is made possible only by the more perfect product of the growers and the more appropriate and artistic accessories provided by the supply dealers, neither of which interests would have attained anything like their present high standards had they worked in individual isolation and shrunk from the wit-sharpening discipline and irresistible inspiration of the exhibition hall.

THE VALUE OF WILD BIRDS IN FIELD AND FOREST.

An Address Before the National Association
Congress at Spokane, Wash., by
William L. Finley

Our Real Wealth.

"We all know that the real wealth of the country is based upon agriculture and horticulture. Without the help of our wild birds, farming would be impossible. No farm hands can accomplish the work intrusted to the birds. Wild birds of orchard, field, and forest are Nature's check upon the increase of insect life. With the great handicap of bird destruction in our present day, the loss from insect and rodent pests in the United States the past year is estimated at \$800,000,000.

The Plague of Insects.

"According to a recent report of the government, insects alone cause an annual loss to the trees of the country estimated at over a hundred million dollars. On the oak alone 400 species of insects which are sought and consumed by the birds of the forest, prey constantly, the experts of the Biological Survey have discovered. On the willow 186 such species constantly attempt its destruction, on the pine 165, on the hickory 170, on the birch 105 and on the elm 80. Careful analysis of the stomachs of thousands of wood-peckers, titmice, creepers, kinglets, wood warblers, wrens, fly-catchers, swallows, nut hatches and other birds of the woods show that their constant labor is to consume just these devastating insects.

What Birds Consume.

"Birds police the earth and air and without their services the farmer would be helpless. Larks, wrens and thrushes search the ground for grubs and insects. The food of the meadow lark consists of 75 per cent. of injurious insects and 12 per cent. of weed seed. Sparrows, finches and quail eat a large amount of weed seed. Examinations by Professor F. E. L. Beal of the Biological Survey of the Department of Agriculture show that a single tree sparrow will eat a quarter of an ounce of weed seed daily. In a state the size of Iowa, tree sparrows alone will consume more than eight hundred tons of weed seed annually.

Nuthatches and chickadees scan every part of the trunks and limbs of trees for insect eggs. In a day's time a chickadee has been known to eat hundreds of insect eggs and worms that are very harmful to our trees and vegetables. Warblers and vireos hunt the leaves and buds for moths and millers. Flycatchers, swallows and night hawks are busy day and night catching flies that bother men and beasts. Hawks and owls are working silently in daylight and darkness to catch moles, mice, gophers and squirrels.

The Farmers' Friend.

"The valuable service which birds render about the farm is shown most strikingly in places where insects and rodents have become so numerous as to destroy crops. Birds collect in such places where food is abundant and by giving their whole time to hunting and eating these insects, they become the most valuable assistants the farmer

can have. To illustrate: A few years ago a large apple orchard in central Illinois was attacked by canker worms. Professor S. A. Forbes spent two seasons in this locality studying bird life. He examined the stomachs of 36 different species of birds and found that 72 per cent. of these were eating canker worms. Out of a flock of 35 cedar waxwings, seven were killed and examined. With the exception of a few small beetles, these birds were living entirely on canker worms. By actual count, he found 70 to 101 worms in the stomachs of each one of these birds. If we assume that each waxwing ate 100 worms a day, which is a very low estimate, the flock of 30 were destroying 3,000 a day.

Blackbirds or Locusts?

"A number of years ago blackbirds were exceedingly abundant through eastern Nebraska. They were so plentiful that the farmers believed they were damaging crops. They began poisoning the birds. A single grain of corn soaked in strychnine was enough to kill a blackbird. In the years that followed, great numbers of these and other birds were destroyed during the spring and fall. At the same time thousands of quail, prairie chickens and other game birds were killed in every county to supply the market. As the birds began to disappear, swarms of locusts took their place. These insects hatched out in countless numbers and began devastating crops. Few fields of grain escaped damage. Many were entirely destroyed. Where blackbirds, quail, prairie chickens, plover and other birds remained, they took to living entirely on locusts. In such localities fair crops were secured solely through the assistance of the birds.

"When the Mormons first settled in Utah, black crickets came in great myriads from the mountains and would have destroyed the crops had it not been for the gulls that came by the hundreds and thousands from the surrounding lakes. At that time the settlers at Salt Lake regarded the advent of the birds as a heaven-sent miracle, and ever since the gull has been esteemed almost as a sacred bird by the Mormons. About the beet and alfalfa fields when they are being irrigated the gulls still collect and feed largely on the field-mice that are so destructive.

An Awful Slaughter.

"Years ago a hunter along the Massachusetts coast shot some terns and sent the plumage to a New York milliner. The tern is a bird that is sometimes called the sea-swallow or summer gull. Its plumage is as delicate as its flight is graceful. The long pointed wings and tails of these birds at once became stylish. 'Send more tern wings. We can pay cash for all you forward,' the telegram ran. Dealers in plumage immediately issued circulars asking for large quantities of terns and sea-gulls. The demand kept running ahead of the supply. Up and down the Atlantic and Pacific coasts and through the country the word went forth. Never had there been such a slaughter of birds in this country. Thousands of terns were killed along the coast of Massachusetts and at other breeding places. At Cobb's Island, Virginia, one of the baymen said 1,400 terns were killed in a single day and

10,000 were shot during the summer. The destruction at other places was equally great. In two or three years the killing of these breeding birds had its effect. These well-known bird colonies were a thing of the past.

"One can get an idea of the slaughter of one species of tern by glancing at the records of the feather sale at the Commercial Sales Rooms in London on April 11, 1908, when one shipment of over 14,000 sooty terns was catalogued. Again at the sale on June 10, 15,500 more skins of this same species were on sale. This means that professional plume hunters had found and raided new breeding places of this species and practically every bird had been killed.

For Women's Fancy.

"Years ago great flocks of gulls and terns added life and interest to our sandy shores. White herons flocked through swamps and everglades of the southern states; the great tule marshes of the West were white with the nesting multitude. In those halcyon days men would have scoffed if you had said these birds, so strong in numbers, could have been destroyed. They were so harmless to mankind that at that time no one could think of a cause that might lead to their extermination. There was no cause except their marvelous beauty. Yet in less than a quarter of a century some of the plume birds have all but taken their places with vanished races.

"Although the decrease of bird numbers has been so marked in our country, it has been even more deplorable in other lands. The demands for plumage of wild birds have been growing. All through the tropical countries natives were eagerly looking for an easy means of livelihood. Killing all kinds of birds has opened the way. Thousands of Indians and negroes have been supplied with guns and ammunition by traders. Everywhere they are roaming through the forests and swamps, seeking the last individuals of the species that are left. Many a rare and beautiful bird has been slaughtered beyond recovery. As the plumage of these birds has become scarce, prices have scored higher and higher. But the money has been ready. So the natives have sought further and harder to lay low the last plume bearer.

What of the Future?

"What will come of it all, this slaughter of the birds? If these plumes were only answering some real need,—but they are for decoration only. As yet no person has ever offered a single logical reason for this destruction, yet there are many reasons against it. The prosperity of all nations must depend to a large extent upon agricultural pursuits. With our bird numbers so rapidly decreasing, the balance of nature is bound to be affected. Our wild birds are as much a part of the natural resources of the country as are the forests and streams. For our own prosperity, we should not permit these resources to be ravaged. Saving our wild birds is a debt we owe, not only to ourselves, but what is of more importance, we are in duty bound to transmit this inheritance to our children."

NEWS OF THE CLUBS AND SOCIETIES

SOCIETY OF AMERICAN FLORISTS AND ORNAMENTAL HORTICULTURISTS.

Registration of Zonal Pelargonium.

Public notice is hereby given that F. H. De Witt & Co., of Wooster, Wayne County, Ohio, offer for registration the plant described below. Any person objecting to the registration of this plant or to the use of the proposed name is requested to communicate with the undersigned at once. Failing to receive objection to the registration the same will be made three weeks from this date.

Name—Red Wing.

Description—Red Wing is a geranium plant of strong growth, stocky, symmetrical. Its leaf is medium size with deep green color and smooth surface and slight zone. Makes an ideal pot plant or bedder as it stands the sun well. Its flower is a deep cardinal red, with a velvety sheen; the floret averages 1 7-8 in. of good substance. Trusses are large and very floriferous.

Registration of Ferns.

Public notice is hereby given that J. D. Pruessner, of 1705 Avenue K, Galveston, Texas, offers for registration the plants described below. Any person objecting to the registration of these plants or to the use of the proposed names, is requested to communicate with the undersigned at once. Failing to receive objection to the registration the same will be made three weeks from this date.

Name—Nephrolepis Pruessneri.

Description—This fern originated with us four years ago and is a sport from *Nephrolepis elegantissima*. It is entirely distinct from its parent variety. The fronds are only about half as long but very double and tripinnate in form. The true character is developed by age only but extra fine specimens are grown in 4-inch pots. They will show their true character in 3-inch pots, too. The fern inclines to form specimens and each frond presents itself as such. It belongs to table class of ferns and loves shade.

Name—Nephrolepis Galvestoni.

Description—This fern originated with us last January amongst a lot of *Nephrolepis Pruessneri* and must be a sport of that variety. The fronds are very fluffy, double and tripinnate in make-up, much shorter than in *N. Pruessneri* and much finer grained and fuller, resembling a real curly ostrich feather. The groove running through of each frond is very distinct. It forms useful specimens in 3-inch pots. The center forms stand up, others form a curve to hang, and the entire pot is covered with them, making it a very distinct character. No pot cover is needed as it hides the entire pot. It is of easy culture and loves shade.

W. N. RUDD, Secretary.

Below is a telegram from Edwin Lonsdale, President of the Society in 1895, which should have been read at the opening session at Cincinnati, but failed to come to the secretary's hands until after the convention was over:

Greeting: Sincerely regretting enforced absence from quarter century anniversary.

Heartiest desire is herewith extended for an instructive and profitable meeting of the greatest organization ever instituted in America and may the great work started in Cincinnati still continue and increase more than one hundred fold within the next quarter of a century is the earnest desire of

EDWIN LONSDALE.

Presentations.

The Colorado delegation presented to President Valentine on arrival at Cincinnati a handsome cut glass vase, in testimony of their personal appreciation of that gentleman and the many ways in which he had made their 1500-mile journey pleasant.

President Valentine was also the recipient at the close of the convention of a chest of silver table ware from the Society members. The presentation was made by H. H. Ritter and the president responded appreciatively. A gift of a pair of pipes was made to Secretary Rudd by the New York party, J. H. Pepper officiating.

WM. S. MANNING

Supt. of Baltimore Parks and President-elect of American Association of Park Superintendents.

ST. LOUIS FLORIST CLUB.

The St. Louis Florist Club will hold its regular monthly meeting on Thursday afternoon, September 9th. This meeting is a very important one for the members as the new officers-elect will be installed and those members who attended the convention of the S. A. F. will be heard from. This meeting will be held on the grounds of the H. J. Weber & Sons Nursery Co., and will be the last outdoor meeting the club will hold this year. The usual postals will tell the members how to get to the grounds.

The 31st biennial meeting of the American Pomological Society will be held at St. Catharines, Ontario, on Sept. 14, 15 and 16. The Ontario Fruit Growers' Association, St. Catharines Horticultural Society and Niagara District Fruit Growers' Association will participate.

EASTERN BRANCH AMERICAN ASSOCIATION OF PARK SUPERINTENDENTS.

This organization held a meeting and outing at Bridgeport, Conn., on Saturday, August 28, at the Hotel Stratfield. There were present Dr. Frank Baker, superintendent of the national zoological park, Washington, D. C., and Mrs. Baker; John A. Pettigrew, of Boston; A. G. Waldrean, New York City; G. A. Parker, Hartford; A. V. Parker, Worcester; Isaac Kelly, Lawrence, Mass.; Gus X. Amrhyn, New Haven; Henry Frost and Mrs. Frost, Haverhill; James Fuller, New London; Commissioner Green, New London; W. H. Burr, Westport, president of the Israel Putnam Memorial Ground Commission; and J. F. Huss, of the Francis Goodwin estate of Hartford. Charles E. Keith, superintendent of Bridgeport parks and president George M. Eames of the board of park commissioners received the visitors and extended unlimited hospitality.

A banquet was tendered the visitors at one o'clock, after which they were taken in automobiles through Bridgeport's two beautiful parks, Beardsley and Seaside, which they pronounced to be among the finest in the country. Beardsley Park has a rolling surface, well adorned with fine oaks, sweet gum and other trees, *Cornus florida* being represented by some extraordinary specimens. Seaside Park is protected by an extensive breakwater. Here, too, the trees are very fine, some grand old specimens of willows and oaks being particularly admired. This property at one time belonged to the late P. T. Barnum, who spent considerable on its improvement. As a public park it was designed by the late Frederick Law Olmstead, over a generation ago. Beardsley Park's development is largely the work of Superintendent Keith. Bridgeport was the first city to be known as "The Park City."

CONNECTICUT HORTICULTURAL SOCIETY.

The business meetings of this society have been resumed, following the summer respite; and on the evening of August 27th the members again assembled at the County Building, at Hartford, with President John F. Huss in the chair. The arrangements are now nearly completed for our two fall exhibitions—one for dahlias, etc., on September 23 and 24, at Unity Hall, Hartford, and the other for chrysanthemums, etc., on November 4 and 5, at Putnam Phalanx Hall, Hartford. The schedules of prizes are now in the printers' hands, and will soon be issued; and much credit for their production is due to James M. Adams, of Hartford, whose efficient work as a member of the executive committee is much appreciated by the society. Following the decease of Mrs. Huss, the wife of the president, last May, a beautifully engrossed and framed set of resolutions of sympathy for Mr. Huss in his bereavement was presented to him at this meeting, and received his

sincere thanks and his expressions of appreciation.

President Huss, who had just returned from Lenox, Mass., gave an account of his visit, and of the horticultural glory that must abound there. He announced that Messrs. James J. and Francis Goodwin, of Hartford, have signified their willingness to aid our fall exhibitions by financial gratuities; for which the society is very grateful.

J. A. Weber, of Hartford, gardener for Walter L. Goodwin, exhibited vases of asters and received a vote of thanks.

President Huss referred feelingly to the loss, by death, of our late brother horticulturist, Amos Reynolds; and a letter of condolence was unanimously voted to be directed to his widow by the secretary.

Julius Copperberg presented to the society, as a relic, a framed certificate of the once-existent Hartford County Agricultural Society, to Jonathan Goodwin, dated in 1841, of an award of \$20 premium for the best kept farm of 40 acres or upward. It will be placed in the archives of our society.

The secretary was appointed a delegate to the 31st biennial meeting of the American Pomological Society, at St. Catharines, Ontario, September 14th-16th. Our next meeting will be held September 10th.

GEORGE W. SMITH, Secretary.
Melrose, Conn.

RAILROAD GARDENERS VISIT RIVERTON AND OGONTZ.

On Wednesday, a. m., August 25, the R. R. G. Association went over the P. R. R. lines from Philadelphia to Paoli as already reported in our issue of last week and at 2 p. m. took boat to Riverton. After inspecting the mammoth plant of the Dreer corporation the party returned to Philadelphia. George B. Moulder, president of the Association introduced N. Stewart Dunlap of the Canadian Pacific to make a few appropriate remarks of thanks to Messrs. Dreer which he did in his happiest vein, and all departed feeling that they had spent the most profitable and enjoyable afternoon of their stay in Philadelphia. There was a feast of wonderful things indoors and outdoors and also something for the inner man. When Dreers make up their mind to do a thing they do it well. We have never seen them do it better than on this occasion. Mr. Stroblein was genial, attentive and patient with everybody; George Clark was there bright and snappy and full of life and cordiality; his brother James was in front with full and accurate information about every difficult subject; Mr. Betz held his end up and Mr. Hoyle and Mr. Ruppert were general pilots and earned golden opinions. A group photograph was taken at the rockery.

On Thursday the 26th ulto., the members went to P. A. Widener's palatial country residence at Ogontz, on the invitation of William Kleinheinz, the superintendent. A personally conducted tour through greenhouses, gardens and grounds was greatly enjoyed; after which the party repaired to Mr.

AMERICAN ASSOCIATION OF RAILROAD GARDENERS AT DREER'S. RIVERTON, N. J.

Kleinheinz's residence for lunch, where the host and Mrs. Kleinheinz surpassed themselves in making everybody happy. J. S. Butterfield voiced the sentiments of the association when he said that instead of liquidating some of the debt for previous courtesies, they had put themselves under still deeper obligations to Mr. Kleinheinz. The unanimous expression among the visitors was that they had seen more and learned more of value to them and their profession than in all the railroad trips they had taken and that this and the Dreer visit were of far greater potential value for future improvement than the inspection of the planting along the various rail-

stations; to encourage the beautifying of grounds adjoining railroad property; to eliminate whatever unnecessarily detracts from the beauty of the landscape as seen from the car window; to stimulate universal interest in presenting more attractive appearances to the travelling public, and by so doing increase the value of the property on which we work.

The last clause especially should appeal to the powers utilitarian and financial on the higher branches of the railroad tree, who are, alas! often prone to take a narrow view of railroad gardening from the dollar standpoint.

CLUB AND SOCIETY NOTES.

The New York Florists' Club will resume meetings on September 13.

The Pasadena (Cal.) Gardeners' Association will hold their fall flower show October 28, 29, 30.

The New England Dahlia Society will hold its second annual exhibition at Horticultural Hall, Boston, on Sept. 10, 11 and 12.

The Gardeners' and Florists' Club of Boston will visit the Bay State Nurseries (W. H. Wyman) at North Abington on Sept. 11.

The Missouri State Fair takes place October 2 to 8 at Sedalia, Mo; \$40,000 in prizes are offered and of this \$865 is set aside for floriculture.

The Retail Florists' Association of New York will give a big smoker at one of the popular restaurants early this month. Messrs. Bowe, Klausner and Warendorff are the committee in charge.

Eighty members and guests of the Lenox (Mass.) Horticultural Society held a picnic at Lake Mahkeenac on August 25. It was one of the largest outings the society ever gave. There was a long program of sports, which included a base ball game between teams captained by William Henry and Alexander McConnachie. An especially pleasing feature of the day was the presence of Mr. J. F. Huss of Hartford, who had charge of George H. Morgan's estate several years ago.

Railway Station Gardening at Relay, Md.
J. A. Byrne, Gardener.

roads. The young society's membership nearly doubled and if it keeps on as now, will be doubled again next year. The next meeting place has not been selected, although Boston has been strongly urged. It was also suggested that Rochester during S. A. F. convention week would be a good place, Tuesday, Wednesday and Thursday and then go on to Boston.

Section four of Article one of the by-laws of the association gives the aims of the society in succinct form:

"Aside from the social features the objects of the Association shall be to consider a more thorough and systematic extension of railroad gardening; to improve the appearance of all railroad way lands—especially those adjacent to passenger

MILWAUKEE FLOWER SHOW.

The Executive Committee of the Flower Show which will be given under the auspices of the Milwaukee Florists' Club are getting busy preparing some of the preliminary work in connection with the show. The Auditorium Building, which is now nearing completion and in which the Flower Show will be held, Nov. 13th, 14th, 15th and 16th, is one of the finest buildings in the country adapted for the purpose. It has an immense arena with seats surrounding the entire floor space, on the circus order, which gives the public an opportunity of seeing the show complete from all viewpoints. Likewise a celebrated band and soloists will be engaged as an additional attraction and with this double attraction it is expected the show will be a great success in every way.

SHAW'S GARDEN.

On Sunday, September 5th, the second opening of Shaw's Garden to the public on Sunday takes place. As directed by the will of the late Henry Shaw, the garden is only open to the public on Sunday in the months of June and September. September 1st was the fiftieth anniversary since Mr. Shaw turned over the garden to the public. The name of the garden has since been changed to the Missouri Botanical Garden; but the public knows it only as Shaw's Garden.

NEPHROLEPIS ELEGANTISSIMA COMPACTA

Another New Fern Originating with Us. To be introduced Fall, 1909.

Of all the valuable introductions in ferns that we have sent out, beginning with the Pierson (Nephrolepis Piersoni), we consider Elegantissima compacta the most valuable of all, particularly from a commercial standpoint. While this resembles Elegantissima in a general way, it is far superior to that variety, on account of its perfect habit. Yet it can hardly be compared with Elegantissima except in a general way, because it occupies a place by itself, and is as distinct from Elegantissima as that variety is from Piersoni, — in fact, it bears the same relation to Elegantissima that Scottii does to Bostoniensis.

Elegantissima compacta has an ideal habit. The fronds are considerably shorter than those of Elegantissima, and it is a more compact plant. It throws a great many more crowns naturally, making a very bushy, dwarf, compact plant. The difference between the two varieties can be seen at a glance.

Fine, strong plants, 2¼-in. pots, \$5.00 per dozen, \$35.00 per 100; 4-in. pots, \$7.50 per dozen, \$50.00 per 100; 6-in. pans, \$1.50 each; 8-in. pans, \$3.00 each.

We make a specialty of all kinds of Nephrolepis, carrying a large stock of all sizes at all times, — Piersoni, Elegantissima, Superbissima, Bostoniensis, Scottii, Whitmani, Amerpohli, etc.

A CALIFORNIA EXHIBITION.

The Portola Flower and Fruit Exhibition of the Pacific Coast Horticultural Society and California State Floral Society will be held in Norman Hall, Fairmont Hotel, San Francisco, on Thursday, Friday and Saturday, October 14th, 15th and 16th, 1905.

The prize schedule is ready and may be had by writing either of the officials named below. The premiums, numbering 176, are very liberal and include a large number of silver and bronze medals. The officers of the show are: H. Plath, 510 Wyoming avenue, manager; D. MacRorie, 271 Crocker building, assistant manager; J. R. Atkinson, 110 12th avenue, secretary; Mme. E. Roeckel-Davis, 125 Carmel street, San Francisco, treasurer.

NEW ENGLAND FRUIT SHOW.

The New England Fruit Show, which is the result of the conference of the Governors of the several New England states, held in Boston last November, is likely to bring together a very fine exhibition of New England-grown fruit and demonstrate beyond a doubt that New England can produce now, as in the past, fruit of the highest quality. The show will be held on October 19th to 24th at Horticultural Hall, Boston. The premium list, in which over \$3000 worth of prizes are offered, has just been issued. It covers 50 pages and should be carefully read by all New England orchardists and fruit gardeners. Send to Wilfred Wheeler, Concord, Mass., for a copy. Advertising space will be rented up to the capacity of the building.

OVER FIFTY ACRES IN CHOICE EVERGREENS

The Framingham Nurseries offer a large and select stock of the following varieties of

EVERGREENS

Abies Balsamea, Concolor, and Fraseri; Junipers of various varieties; Picea Alba, Engelmanni, Excelsa, Pungens glauca, and Pungens Kosteri; Pinus Excelsa, Mugho, and Strobus; Pseudo-Tsuga Douglasii; Retinosporas, assorted; hardy Taxus, such as Canadensis, Cuspidata, and Brevifolia; Thuja Occidentalis, Globosa, Peabody's Golden, Pyramidalis, and Siberica; Tsuga Canadensis, Hemlock Spruce, a large and fine lot.

We have some fine specimens of Abies concolor, Picea pungens, and Pinus Strobus. Most of the above varieties can be safely planted from the middle of August until the middle of September. A personal selection is always advisable. Boston and Worcester Electric pass our grounds.

The Corn Outlook.

Reports of frost in Iowa and some of the northwestern states is a warning of what is to follow. No serious damage has yet resulted, but when even light frosts come thus early there is ample reason to fear that the killing kind is lurking in the near background. The fact that corn is generally two to three weeks late is an added cause for alarm. It begins to look as if the three billion bushel crop predicted by the Department of Agriculture will prove an iridescent dream, and many good judges say that a crop equalling last year's in quantity, but not in quality is about what the harvest will be. These observations are with reference to corn as a whole, but it may be accepted as a fact, that if field corn does not fully mature sugar corn will not. However more of this anon.

News of an unsatisfactory character has recently come to hand as to the vine seed crops. Up to the middle of July conditions were generally promising, but since then there has been marked deterioration, particularly in Nebraska, due mainly to the protracted drought.

Pea Delivery Below 50 Per Cent.

Pea seed harvesting is generally about completed, and the crop will prove one of the shortest ever harvested in proportion to acreage. Preliminary estimates will be issued by the principal growers in a few weeks, and we shall then have a means of definitely estimating the crop. Enough is known to warrant the prediction that the average deliveries will be below fifty per cent, and as the European crops are also very short, the exportable surplus will be very small if any at all. It looks as if prices, especially on the large podded varieties, would reach new high levels the coming season.

Beans Improving.

The latest information on beans indicates an improvement in that crop, and if it can be harvested without damage by rain, there will be beans enough of most varieties to go around, at a price. Black Valentines will be short again, as the seed stocks were insufficient to meet demands, and growers were very generally oversold. The same may be said in a lesser degree of the Burpees and Giant Stringless Green Pods.

Optimistic Feelings.

Vacation time is now generally over and the heads of the big houses are

returning reinvigorated to their desks for the next ten months' grind. The outlook, however, for the trade is distinctly favorable, and a feeling of optimism is general. While the shortages in many lines will prove a real hardship, the situation as a whole is vastly more encouraging than would be the case with a general surplus, even of very moderate proportions, and the more one studies the history of the seed business, the more certain does this conviction become. The growers and farmers are the principal sufferers, but even to them it is not an unmixed evil, and particularly the former.

Newark Enterprise.

It was hinted some weeks ago in HORTICULTURE that the house of J. F. Noll & Co. (Inc.) would probably be the center of interesting developments, but the writer was at that time not free to disclose certain plans which were then on foot. These plans have now materialized in part at least and it can now be announced that Mr. E. C. Dungan, for more than twenty years connected with Mr. Henry Maule has acquired a substantial interest in the firm of J. F. Noll & Co. (Inc.), and will be its active head. There is a possibility of another well known representative of one of the large seed houses associating himself with Mr. Dungan. Mrs. Noll will retain a controlling interest in the firm but will retire from its active management. For over fifteen years Mr. Dungan has been the able and efficient manager for Wm. Henry Maule, and his many friends will wish him the fullest measure of success in his new venture. Mrs. Noll is also to be congratulated in securing the services of so able and faithful an associate. "Now watch us grow."

A Great Fair.

"The Great Cambridge Fair" is on this week, and with promise of fine weather, its able president, our genial friend, Jerome B. Rice, is happy. Due to his able management, assisted by a staff of live lieutenants, this Fair, after the State Fair at Syracuse, has become the largest in the Empire State. It is wonderful what brains and energy will accomplish.

The Bulb Season in Holland. Notes on Nursery Stock.

We take the liberty of publishing the following interesting extract from a letter written by Mr. J. K. M. L. Farquhar, dated at Haarlem, Holland, August 20.

"Formerly this city was the centre of the bulb-growing district; now the centre is Hillegom 6 or 7 kilometers to the south. Bulbs have been later in ripening this year owing to a wet and cold season—they have ripened splendidly, however, and as the long growing-season favored the development of size, all bulbs are of unusual excellence. Several kinds of tulips have grown so as to burst their outer skins. This renders the bulbs less attractive but will not affect their flowering quality in the least. The beautiful single crimson Dussart has burst more than any other sort.

Hyacinth disease which was greatly feared several years ago is now being

CYCLAMEN SEED

NEW CROP

If you want thrifty plants that will bloom freely and produce gigantic bloom, then our Fancy Giant Cyclamen is the strain to grow. Our seed is grown for us in England by a leading specialist.

PHILADELPHIA, PA.

controlled. The hyacinth crop this season is one of the best ever harvested. Tulips are in good supply except the red varieties, which are in great demand at high prices. There is also a shortage of yellow crocuses; the other colors are plentiful.

There is plenty of nursery stock except roses and these are decidedly short throughout northern Europe; even in the north of France they were very badly winter-killed, and the Holland agents who have taken orders in the United States at the prices of former years are having trouble to get stock to fill their orders.

Azalea indica is also in short supply; many of the plants have as yet no flower buds.

There is great enthusiasm here over the coming Bulb Exhibition to be held in Haarlem next April. It will undoubtedly eclipse any previous exhibition of the kind."

Notes.

Henry Eicke, formerly with Stumpp & Walter Co., New York, is now with O. V. Zangen, Hoboken, N. J.

Chinese sacred lily bulbs have arrived. Roman hyacinths are still very scarce; many inquiries are being received. Cold storage giganteums are likewise scarce and much in demand.

Mr. Ad. Goldenberg of R. M. Ward & Co., New York, sailed August 31st on the Kaiser Wilhelm II for an extended tour among the lily of the valley growers in Germany, as well as visits to Holland, Belgium and France—on business matters.

James Whiting, formerly of the Wa-
ban Conservatories, Natick, Mass., has
been engaged as foreman in the flori-
cultural department at the Agricul-
tural College, Amherst, Mass., and not
James Gillis as reported by us last
week.

Joseph Hurley, head gardener on the
James W. Paul estate at Radnor, Pa.,
for many years, has accepted a posi-
tion with Thomas W. Hunter in a simi-
lar capacity at Haverford, Pa., where
Mr. Hunter is laying out a handsome
new country estate. Ogelsby Paul is
the landscape engineer on the opera-
tion and his plans are as usual very
up-to-date and require first-class care
after they are completed to give the
best results. This explains why a man
of Mr. Hurley's ability has been select-
ed. His duties will commence Oct. 1st.

CHICAGO NOTES.

Renumbering the Streets.

The renumbering of the streets of Chicago will be of interest to many readers. The work is finished and goes into effect September 1st. Madison and State streets are taken as a base and the numbers east, west, north and south radiate from this point. The west and north sides will be changed most, and after the new plan becomes familiar it will be a great improvement, for the old system or lack of system was very confusing. The district of the wholesale florists is practically unchanged, but many of the retailers and growers will now be known by another address.

Hughes' Window.

H. R. Hughes, the florist who talks to the people by means of his window, now has an attractive bathing beach scene as a drawing card and with it shows how the lake front should be open to the people.

The lesson is a live one, for the question of the right of the Chicago people to the lake front is one that is just now being strongly agitated. Mr. Hughes has never had a window display that appealed more directly to the people.

Personal.

Frank Oechslein, a well-known plant grower, is taking his annual overhauling for rheumatism at St. Joseph, Mich.

W. P. Kyle, formerly of the J. B. Deamud Co., and Joseph Foerster, for many years with George Reinberg, will start in the wholesale commission cut flower business in the Atlas Block. Kyle & Foerster will be the firm name.

Visitors: H. H. Kuhman, Houston, Texas; L. P. Thomson of C. A. Dahl Floral Co., Atlanta, Ga.; W. L. Rock, Kansas City; A. L. Blaser, Dubuque, Iowa; Martin Reukauf, representing H. Bayersdorfer & Co., and J. J. Karins, representing H. A. Dreer, Philadelphia.

The beautiful silver cup won by the Chicago Bowling Team at Cincinnati is on exhibition at Zeck & Mann's and is attracting much attention.

NEW FIRMS.

Messrs. Ciny & Rowe have started the Woodbine Floral Co. at Kirkwood, Mo. This new firm has four houses filled with carnations, violets and sweet peas and will grow this stock for the St. Louis market.

It has been reported that our old friend, Max Herzog, will again enter into the florist business on South Jefferson avenue, St. Louis, but this time in the retail business. He will erect his own building.

Albert T. Hey, who went from Springfield, Ill., one year ago to take the management of Vaughan's greenhouse at Western Springs, has severed his connection with that firm and rented the Hill greenhouses at Maywood. It is rumored that Albert Erickson, foreman, and who assisted in erecting the first greenhouse and was in the firm's employ ever since, is to be a partner with Mr. Hey.

OBITUARY.

Professor Emile Christian Hansen.

Professor Emile Christian Hansen, the renowned botanist, died August 27 at Copenhagen, Denmark. He was born on May 8, 1842, at Ribe, in the province of Jutland, Denmark, and as a young man learned the trade of house-painter. His ambition led him to attend the art school at Copenhagen, but he soon turned his attention to the natural sciences. For three years he supported himself by giving private tuition, until in 1866 he received a scholarship from the Minister of Education which enabled him to study mathematics and science at the Copenhagen University. He then became an instructor in the gymnasium there, and soon devoted himself to the study of chemistry and botany, especially with regard to the physiology of plants. In recent years he has been recognized as one of the leading authorities on the latter science.

In the physiological laboratory at Carlsberg Hansen made a study of the lower order of plants, and especially of the fungi. Later he was appointed head of the physiological laboratory. He evolved a plan for a systematic research of the alcoholic fermenting yeasts and upon other micro-organisms influencing them. This plan led to a comprehensive study of the fungi which established a new epoch in botany. His studies also covered cell physiology and the conditions of mutability in micro-organisms.

Professor Hansen tried to give practical effect to his discoveries by placing the utilization of yeast cultures on a new basis, and in 1887 with Professor Kuhle he devised an apparatus for producing a pure ferment which is now in use in many breweries in Europe. He wrote a work on micro-organisms found in the atmosphere at various seasons, a monograph on the "Morphology of Alcoholic Ferments" and other papers on kindred topics.—Boston Transcript.

Mrs. P. Scanlan.

The young wife of Commissioner Phil Scanlan, St. Louis, Mo., died the past week. Mr. Scanlan was only married a little over a year. Mrs. Scanlan's death followed the birth of a child, which also died shortly after. Mr. Scanlan has a great many friends among the local florists who extend their sympathy.

Henry McDonald.

Henry McDonald died on August 25 at his home in Brockton, Mass., aged 38 years. He had been ill but a short time. Mr. McDonald, a native of the West Indies, was a resident of Brockton for several years, being employed as a gardener on several large estates. Besides his wife, he is survived by three small children.

F. E. Rawlings.

Mr. F. E. Rawlings, secretary of the Plant Seed Co., St. Louis, was drowned the past week at Bourbon, Mo., where he and his wife and son were spending their vacation. The accident occurred while Mr. Rawlings was in bathing. The news came as a great shock to a large circle of friends in the trade.

Flower Market Reports.

BOSTON Cooler weather, returning vacationists and a few timorous ventures at matrimony have conspired to inject a little life into the flickering remnant of the flower trade this week and great is the joy caused thereby. But it will not do to crow too much just yet. Lily of the valley, white roses if good (and very few of them are), cattleyas if they could be obtained, gardenias—anything real choice and chaste—can be placed at a good figure. All the rest that goes to make up the cords upon cords of stuff sent to the flower markets daily must take its chances on an unappreciative and forbidding market. There are carloads of gladioli, but Shakespeare is the only one that brings a price—as much for a dozen Shakespeare as for a hundred of any other. Asters—there's no end of them. A few of rare tint and finish, with flowers and stems of exhibition proportions can be sold at a dollar or two per hundred. For the balance a dollar a thousand is considered a snap. There are fine lilies now; also excellent tuberoses at about two dollars per hundred spikes. Carnations seldom seen and not wanted until they are better.

BUFFALO There was plenty of everything in the line of cut stock and all grades. It was rather a hot week for roses but they moved better than heretofore. The late crop of asters is on and some choice stock is to be had, but too many of the ordinary shorts are coming in with very little sale. The same may be said of gladioli. Such varieties as America need no urging, but the mixed stuff remains with the dealer. The white rose and lily of the valley situation has improved, due largely to the demand for early fall weddings.

CHICAGO Trade is still at a very low mark and indications are that there will be little or no change for some time to come. There is a lively skirmish for good flowers when orders come in. So much of the stock is poor that it is unsalable. The early severe rains, followed by a prolonged drought injured the aster crop to the extent of making much of it worthless. The late crop of asters is the poorest ever known to some growers while others are now cutting some quite fair flowers for the first time this season. Carnations are short in stem and small in flower and the supply is limited. The first cosmos of the season were noticed Monday. Roses are improving from week to week and Beauties are now quite fair both in quality and quantity. The return to the city of many for the opening of school will no doubt add to the sales of the florist and gives promise of the return of the busy season.

INDIANAPOLIS During the past two weeks little has occurred to break the ripple of the summer dullness. The best roses are Beauty, Kaiserin and Killarney. Maryland is well liked and bids fair to displace Killarney to some extent as a summer flower. A few carnations of the new crop are appearing. Good asters are very scarce around this vicinity. Gladioli are good

but far too numerous. Lilies of all kinds are quite plentiful. Golden Glow and chrysanthemums being sent in by several growers, but don't bring in returns sufficient to pay to grow them so early. The demand for lily of the valley and orchids is very moderate. There is quite a lot of outdoor stuff coming in which meets with very little demand. Smilax are selling well and all other greens.

PHILADELPHIA Business was very dull last week. People are all away. There is plenty of material but no demand for it. To quote one of the big wholesalers: "There is nothing to it." This sizes up the situation about as well as a story as long as your arm. I wish there was some better news to send; but candor compels the doleful tale. Asters are better than ever and considering the dry weather we have had this summer are really remarkable at the present time. Gladioli have not stood the siege nearly as well and are coming along very sparingly. A few good rains would help these considerably. Roses generally have improved. My Maryland especially being particularly fine. American Beauties have also taken a distinct step forward, and there are some fine White Killarneys

FIELD GROWN Carnation Plants

We offer, subject to prior sale, the following:

These are extra strong, healthy plants, the product of the most successful Eastern Growers, stock that has been carefully selected and handled under the best possible methods, thus insuring results that will place the plants in our customers' hands in the very best condition.

arriving. Carnations few and very poor. Dahlias have just commenced, among the forerunners being: Lyndhurst, White Swan, Perle d'Or, Nymphaea, Arabella, Livoni, Sylvia, Florida, Flora (a good white), Standard Bearer, and Red Huzzar. After a week's lull, fancy water lilies have started up again and are now exceptionally good. Lily of the valley is

Flower Market Reports.

(Continued from page 351)

selling up clean right along, and the critics and hard-to-please have to take a back seat for a minute. Cattleyas and other orchids quite scarce. All the outside subjects such as hydrangea, gaillardia, centaurea, etc., very draggy. Cosmos, the early flowering kind (Woodside), is perhaps the only decent seller in this class. Greens entirely too plentiful. Wild smilax, new crop, will make its advent next week, and there is likely to be a good demand for this for early fall trade. Most of the houses demand three days' notice for deliveries on wild smilax.

NEW YORK Cooler weather and considerable rain fall have resulted in a

greatly improved quality in many of the items in the outdoor product coming to this market, but nothing has yet transpired to improve the sale of these things and so the flower marts are encumbered with asters of high and low degree, garden lilies, tritonnias, hydrangeas, dahlias and gladioli, which are moved with extreme difficulty and often find their only outlet through the dump cart, all of which is extremely discouraging for the man who grows them and sends them in. At such times the wholesaler who confines himself to greenhouse product has the best of it, for empty counters and boxes are preferable to stacks of material going to waste. A certain quantity of select Beauties, Maryland, Kaiserin and Killarney roses, cattleyas,

yas, gardenias and lily of the valley, can be disposed of every day at respectable figures, but there is almost no use for the small roses from newly planted stock which are being received in large consignments and which are well sold if disposed of at 25 to 50 cents a hundred. Carnations are as yet, very insignificant both in quality and quantity. Some of the asters are simply superb. Lilies good and enjoying only a moderate call.

PHILADELPHIA NOTES.

A distinguished visitor this week was Adolphe Buysens, Vilvorde, Belgium, Professor of Agriculture and Horticulture at that place.

Samuel S. Pennock, of the S. S. Pennock-Meehan Co., left last week for his annual vacation which this year will be mostly to down east points, including Nova Scotia. He expects to be back in Philadelphia by September 16th.

W. K. Harris, we are happy to report on the convalescent list. For the first time in two months he was on his afternoon hunting grounds at the Florists' Club on the 31st ulto., where he met and passed a pleasant hour with his friends.

Local exhibitors at Cincinnati say that convention trade was very good as to number of orders, but that big buyers were conspicuous by their absence. The conventions need more of the big retailers in attendance. How

to interest them—that's the question.

A new outlet for flowers is always a pleasant item to chronicle. Growing facilities tend to increase much faster than agencies for distribution. Two new ones will start up this month, namely, J. F. Leary (formerly of Battles) in the Hawthorne building, 39th and Lancaster avenue, opening day Sept. 4th, and F. M. Ross now at 206 East Girard avenue who will move to 13 Fourth 60th street and expects to open there Sept. 15th, if not sooner. Mr. Ross will continue the old store as a branch.

BOSTON GROWERS' MARKETS.

The annual sale of choice of stalls at the Park street Market took place last Saturday and in number of stalls disposed of, average price of same and aggregate amount received, was considerably ahead of any previous year. The capacity of the market has been increased by a re-arrangement which adds fourteen new stalls.

The Music Hall Market sale of stalls was held on the same date. It was much the biggest sale they have ever had. Although the first choices brought lower figures than they did last year the prices were steadier and average premium paid was considerably higher. It is expected that this market will move on October 1st to the basement of the new building now being completed at No. 2 Park street.
